WORLD OF INDIAN FINANCE

Calcutta, March 17, 1933.

As was expected, credits continued in most plethoric supply. Borrowers could nowhere be found. The normal rate for interbank call money is ½ per cent. but lenders would be glad to get even ¼ per cent. Not only is there a total slackness of demand for short credits, but the rates for term deposits have also declined during the week. The reduction in the rates for term deposits has been necessitated by the fall in the average discount of accepted tenders on the Treasury Bills' day. In the past four weeks, there has been a progressive and rapid decline in the average rate of accepted tenders. In the current week, the rate was Rs. 1-4-10, as compared with Rs. 1-7-10 on March 7 ; Rs. 1-10 on February 28 ; and Rs. 1-14-7 on February 21. A drop of ten annas from the already low level of Rs. 1-14-7 in three weeks is a development so favourable that no one could have dreamt of this possibility. This week's rate is the lowest on record for the Government of India's short-term borrowing. The yield works out to 1 1/3 per cent. ; and seeing that funds are literally unusable, there is every prospect of even lower rates being seen. While, on the one hand, local credit conditions have brought about this favourable development for the Treasury, money rates in London have also exerted an influence in the same direction. At the present juncture, while short-term funds are available in such copious quantities at rates so markedly cheap, the question arises whether the Government would not be well advised in securing more of their requirements in the form of six or nine months Bills, which should suit their ways and means position as well as the books of the banks to a much better extent.

There can be no doubt that the banks and investment institutions would be keenly interested in Bills of a longer term than three months. Evidence of this is to be had in the keen demand that the market has evinced for 6 per cent. 1933-36, 5 per cent. 1933, and 4½ per cent. 1934 bonds. 6 per cent. 1933-36 bonds are redeemable on August 15 ; 5 per cent. 1933 bonds on September 1 ; and 4½ per cent. 1934 on September 15, 1934. The first two are being purchased as five months Bills ; and the demand for 1934 bonds has been even greater as the scrips in the other two loans are difficult to find. The price of 1934 bonds is now Rs. 102-2. Considering that they are redeemable in eighteen months at par, the demand at a premium of Rs. 2-2 indicates a considerable enquiry in the market for extremely short-dated government securities. In a situation of this kind, there can be no doubt that six months Bills and nine months Bills would prove most welcome. From the point of view of the Government, three months Bills issued now would mean that the repayment will occur at a time when, possibly, they should be getting busy over the New Rupee Loan. It has always been the policy of the Government to keep a light load of Maturities in those months of the monsoon period when thert is the utmost likelihood of the announcement of the New Loan plans. It should, therefore, be most suitable for the Treasury, also if, instead of three months Bills, their short-term needs are found by Bills of six or nine months duration.

It is, however, necessary to examine how far, in the conditions created by the American crisis, three months Bills are of vital significance as the most handy device for exercising credit control. It may be recalled that on the first shock of the news from America, exchange collapsed, the rate sinking, at one time, to 1s. 5 27/32d. There has been appreciable recovery since then ; but there have also been recurrent phases of bearish sentiment in the exchange market. While it may be said that the market has entirely left behind the first panicky feeling produced by the American developments, it has not yet recovered its full confidence. The market is still jumpy ; and any adverse news from across the Atlantic is not at all unlikely to cause an upset. While this uncertain feeling lasts, it is of paramount importance that the Government should have a measure of control over the credit position. From this point of view, it is not six months or nine months Bills but three months Bills, which can be of adequate service. If this reasoning be correct, it follows that till the American situation clears sufficiently to give assurance to the markets here and abroad, three months Treasuries will have to be kept up. Moreover, assuming that normal conditions set in again in India,

we expect the Government would come out with their next instalment of conversion plan as early as practicable. Which means that no major operation connected with the New Rupee Loan would have to be put through in June or July.

In the course of the mid-week Supplement on the American crisis, it was suggested, in these columns, that this should exercise no adverse effect on gold shipments from India ; that, therefore, the apprehensions as regards a weaker exchange would prove unfounded ; and that in the absence of complications in the exchange market, there should be no change in the money market conditions as well as in the Treasury Bills policy and plans. Events in the current week have, in an emphatic degree, proved the correctness of the estimate, given by us, of future developments. After reactions and rallies, the rupee-rate has, towards the finish, ruled very steady, with a firm undertone. The rate at the time of writing is 1s. 6d., for T.T. up to September. Gold shipments from Bombay in the last week were over Rs. 75 lakhs ; and information received from Bombay indicates that exports in the current week would not be smaller. It is, therefore, clear that the ability of India to sell gold abroad has not been affected in any way by the American happenings. There is keener and more widespread appreciation of this fact in the market ; and this is, in large part, responsible for the brighter sentiment in exchange. Likewise, there has been no necessity to reverse the easy money policy of the Treasury. On the other hand, developments this week have only lent further emphasis to that policy. As a consequence, giltedge securities have shown substantial improvement. In the early part of the week, exchange and giltedge were somewhat quiet ; in the latter part, marked firmness has been manifest in both. 3½ per cent. Rupee Paper, after declining to Rs. 82-2, has advanced to Rs. 83-6 ; and 4 per cent. 1960-70 has firmed up from Rs. 94-1 to Rs. 95-1. There are good buyers both for long-dated and short-dated scrips.

All circumstances taken into consideration, there are good grounds to believe that the last vestige of the adverse effect of the American crisis would disappear in a week or two ; and that the market would be back in the state in which it was on the eve of the crisis. Meantime, the control of the Government over the money market has become even surer. This means that, in a fortnight's timt or so, the stage will again be set for the next phase of the conversion plan.

Contrary to expectation, on the reopening after the bank holiday in America, the sterling-dollar rate was quoted at 3.40. Advices from America had induced bankers in India to expect that the opening cross rate would be in the vicinity of 3.75. The announcement that tht rate was unchanged at 3.40 came, therefore, as a surprise. From this, one should infer that the authorities in America are most anxious to create the impression in international financial circles that whatever be the changes introduced as regards embargo on gold exports, there was no intention on the part of the American authorities to depreciate their currency. The position, at that end, rtmains obscure. Two things, however, are certain, namely, that, from the domestic point of view notes are not convertible into gold ; and that, from the international point of view, no gold will be available for export. In the light of these two factors, it is difficult to understand what exactly is the significance of the claim that America has not departed from the gold standard. There has been no departure from the gold standard, mainly in the sense that no devaluation of the currency has taken place. Even in this rtgard, considerable misgivings, are felt as to the ability of the financial authorities in the United States to escape the need for devaluation. In the course of this week, dollar has deprtciated in terms of sterling, the rate at the time of writing being 3.46 5/8. Will this process of depreciation continue and persist? There are still many who believe that it will not be many days before a rate like 3.70 to 3.80 is seen. The prestige of the American authorities demands that the rate should be kept roundabout 3.40. But the industrialists and the other producing interests would certainly like to see a rate nearer 3.80. Between the prestige of the authorities on the one hand and the clamour of the vested interests on the other, time alone will show which prevails in the end.

The exchange market has been very steady. Bombay has been reporting even firmer conditions than Calcutta. There have been good sellers at 1s. 6d., for any position up to September.

The closing rates are: 1s. 6d., March-October T.T. ; 1s. 5 31/32d., November-December T.T. ; 1s. 5 15/16d., January-February T.T. ; 1s. 5 29/32d., March-April T.T. and 1s. 5 7/8d., May-June T.T.

Bills may be quoted : 1s. 6 3/32d., up to August and 1s. 6 1/16d., from September onwards.

Money has literally gone a begging, with none to borrow. The nominal rate is ½ per cent. for inter-bank call money. One-month, two-month and three-month deposits were quoted 1 per cent. all through.

THE WHITE PAPER

The White Paper issued yesterday follows, in the main, the scheme of Constitution arrived at in the third Round Table Conference. The comment, which we made on the Round Table Scheme in the issue of *Indian Finance* dated January 26, holds just as good in regard to the Constitution outlined in the White Paper. We summed up our comment thus :

> "The Constitution that is envisaged leaves too much to the individual discretion of the Governor-General ; as such it favours autocracy and denies Responsibility. It makes the perpetuation of wasteful features a matter for statutory protection through absolute power reserved to the Governor-General ; as such it makes an administrative necessity of extravagance, and makes economy an impossibility. It seethes with conditions, interlaid in close succession, the fulfilment of which is alleged to be essential for the creation of precious and coveted institutions ; and yet obstacles alone are put in the way of fulfilment of those conditions ; as such the scheme is a challenge to the faiths even of the most credulous. Altogether, it is difficult to be enthusiastic about the provisions of the new Constitution".

We repeat that it is not merely difficult, it is impossible, to regard with enthusiasm the plan of constitutional advancement contained in the White Paper. Dominion Status with necessary safeguards was the kind of aim which was sought to be fulfilled in the new plan. Safeguards, necessary and otherwise, are provided for in profusion. Status, Dominion or otherwise, is being conferred but in a halting and hestitant manner. On a document of this importance, it is far from us to suggest that comments could be offered, without adequate study and detailed consideration, in crisp epigrams. We need only add that we have merely stated our first impression ; we will, in a special supplement early next week, deal with the various issues raised in this document which may well prove fatal or fateful.

FINANCE ABROAD.

The second Emergency Finance Bill has at last emerged as law, although its passage through both the Chambers is something in the nature of a fluke, and could be accomplished only after M. Deladier, the Prime Minister, was driven to make the matter a vote of confidence. In the final form in which they are passed, the new proposals provide for further cuts and improvements as follows: national expenditure, 1,893 millions; fiscal rearrangements, 1,016 millions; stricter control over income-tax collection, 650 millions; and better utilisation of exceptonal and temporary resources, 1,025 millions. The effect of the new law, it will thus be seen, is to reduce by 4,584 million francs the floating deficit which, as announced some time ago by M. Jacquiet, the *Rapporteur General* for the budget, was estimated by Treasury experts to amount to 10,500 million francs. M. Cheron, it may be recalled, attempted to wipe out the whole of the deficit, without resort to loans, by increased taxation and retrenchment in expenditure; and that was the end of M. Cheron as Finance Minister. The Deladier Government has profited by the fate of M. Cheron to realise just how much in the way of economies and new taxes can be put through to cover the deficit without actually risking a Government defeat. After all that the Government have done to reduce the deficit, there still remains 5,800 millions to be provided for; and there is no conceivable means by which it can be provided for, except through loan issues which are bound to still further add to the burden of the public debt.

British Army Estimates:

The British Army Estimates show a provision of £37.95 millions for 1933-34, an increase of £1,462,000 over the current year. It may be recalled that the estimates for 1932-33 registered a reduction of over £3 millions in the level of Army costs till then prevailing, in pursuance of Government's economy campaign. The rise in the estimates for the coming year can only mean that there is to be a reversal in the programme of economy. The renewed upward movement in the Army Estimates is explained by the Government in a somewhat slipshod way. "Some of the reductions made last year," it is contended, "were of a temporary and transitory character to meet the special circumstances of the financial crisis"; and they involved "a definite loss of efficiency and could not be repeated without serious consequences." The maintenance of expenditure at a level powerless to affect efficiency adversely, has always been claimed to be a distinguishing trait of military administration; and the admission, after the event, of a contrary standard having been followed, will hence carry little conviction. It has the appearance of a tactical pretext for bolstering up expenditure already decided upon in the light of other undisclosed reasons; and its repercussions on British financial administration in the immediate future can hardly be happy.

New Zealand Conversion Scheme:

The New Zealand Government announced a scheme in Air-mail week for the conversion of £115,000,000 of its internal debt into securities bearing 4 per cent. interest, involving a reduction of 20 per cent. in the rate payable on earlier stocks. There is something almost Draconian in the measures announced to induce the holders of stock to effect the conversion. "In fairness to the country's patriotic citizens, who stood up to New Zealand's requirements, and decided to convert," Mr. Coates, the Minister of Finance, announced that dissenting holders will be called upon to pay a special tax of 33 1/3 per cent. on payments made at the old rate on all unconverted stock. So, the only choice left to the owners of government securities is between foregoing 20 per cent. of their interest income by agreeing to conversion, or being compelled to part with 33 1/3 per cent. as the penalty for failure to convert. The whole scheme smacks of an element of disguised expropriation; and it introduces an altogether new, —and it may be added, a deplorable,—feature into Government conversion programmes, by robbing the holders of stock of that freedom to which they are entitled, and the protection of which is, indeed, the essence of the financial credit of Governments.

BANKS:

It is a mistake to think of a Bank as an institution which exists merely for the purpose of taking care of depositors' money and paying it out on their instructions. Whilst it is true that this is the primary business of a Bank, it forms only a part of the duties which Lloyds Bank is prepared to perform for its customers. It is not possible in a short space to enumerate the many facilities the Bank offers, but its Branch Managers are prepared to consider, or, if they are not themselves in a position to advise, to obtain expert opinion upon any question affecting their customers' finances, investments, income tax, Trusteeships, Executorships, etc.

LLOYDS BANK
LIMITED.
(Incorporated in England.)

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.

(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

The Company issues Policies covering :—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

MARKET REVIEWS.

CALCUTTA STOCK EXCHANGE.

(By our Correspondent).

Thursday Evening.

Jute—This section was fairrly steady during the period under review, with fluctuations confined to very narrow limits. On Monday, Howrahs opened at Rs. 38-12 and Kamarhattys at Rs. 370. Hessians fluctuated within a margin of As. 2 between Rs. 8-4 and Rs. 8-2 while Jute was moving within a margin of Re. 1 beween Rs. 25-4 and Rs. 26-4 respectively. American markets were closed ; hence there was great uncertainty in the local market, but speculators wanted to put up prices in anticipation of steadier feeling overseas. The more cautious operators wanted to wait and watch developments. Albions were placed at Rs. 205, a small parcel of Anglo-Indias was done at Rs. 264 and again at Rs. 269, Aucklands were placed at Rs. 155, Ballys and Barnagores at Rs. 105 and Rs. 108 respectively. Cheviots changed hands at Rs. 186, Dalhousies at Rs. 341-8, but later at Rs. 337, Fort Williams at Rs. 210-8, Kankinarrahs at Rs. 357, Lansdowns at Rs. 124, Naihattis at Rs. 335, Orients at Rs. 177, and Standards at Rs. 258, Fortglosters at Rs. 407-8, Kinnisons at Rs. 593 and Lawrences at Rs. 410 and Deltas at Rs. 304.

Among smaller denominations, Presidencys were steady at Rs. 4-8, Clives were placed at Rs. 22-12 but later at Rs. 22-4, Nationals at Rs. 18-8, Reliances at Rs. 63-8 and Empires at Rs. 31-4. Dealings in bigger stocks was most difficult for want of buyers or sellers. Bombay as usual picked up small lots on investment account. The report of Alliance Jute just to hand disclosed improved results. Its audited accounts for half-year ended January 31, 1933, shows a profit on revenue account of Rs. 1,95,702 out of which deducting Rs. 53,064 for Insurance and Interest there is a net profit of Rs. 1,42,638. By adding Rs. 6,96,687 which has been transferred from Reserve fund, the total comes to Rs. 8,39,325, out of which by deducting Rs. 7,34,783 being debit balance from last account, there is a balance of Rs. 1,04,542. The directors have paid dividend on preference shares amounting to Rs. 90,000, carry forward being Rs. 14,542.

In the face of very little demand from consuming centres, the Hessian market is not likely to improve. The stock figures available from America show a decrease of consumption and stocks of half a crore of yards.

The local stocks are as under on February 28, 1933:—

Hessians	...	90,902,344 yards.
Heavy goods	...	94,008,985 yards.

Cottons—Dull conditions have obtained and only a limited business was put through. Bengal Nagpur (Ordy.) were marked at Rs. 20-12. Kesoram (Ordy.) at Rs. 3-12 and New Victoria (Ordy.) at Re. 1-10. Dunbar (Ordy.) may be placed at Rs. 95.

Coals—Trading was on a very restricted scale without any fresh feature to comment upon, as enquiry has altogether disappeared. Bengal changed hands at Rs. 206, Bokaro & Ramghur at Rs. 7-8, New Beerbhom at Rs. 9, and Union at Rs. 9-8, Amalgamated can be placed at Rs. 12-8.

There has been an exceptional and persisted enquiry for Talcher round Re. 1-8 while sellers predominated in most other stocks.

Reports and accounts for the half-year ended 31st December, 1932, of the Bird-Heilgers group of collieries have been published during the period under review and they do not provide any encouraging reading.

Miscellaneous—Transactions were on a limited scale during the past week and there have been no outstanding features. A fair business was reported in the shares of the Public Utility concerns. Agra Electrics were dealt in at Rs. 75, Bareilly at Rs. 10-12 and Benares at the same figure. Bengal Telephones (Ordy.) have been a free market round Rs. 13-12.

Engineering section has been quiet with less business passing. Indian Standard Wagons were marked down to Rs. 49-6, Indian Iron and Steel were placed round Rs. 5-4. Arthur Butler, however, kept steady on the improved prospects of the company.

Sugar shares opened quiet, the turn easier on the rumour that Java may be off the gold standard through Holland. But as the session progressed better feeling again set in and rates improved covering most of the losing grounds. Cawnpores (Ordy.) are now quoted at Rs. 37-8, Champaran at Rs. 29-4, New Savan at Rs. 18-2 and Samastipur Central at Rs. 18-4.

Among others, Burma Corporation opened firm at Rs. 8-2 but again eased off to Rs. 7-10. Hooghly Flours were dealt in at Rs. 14-8, United Flours at Rs. 14. Midnapore Zemindary at Rs. 78 and Port Shipping round Rs. 10-8. Bengal Paper (Ordy.) recorded a deal at Rs. 71-8 and Titaghur Paper (Defd.) were marked at Rs. 5-4. Bengal Timber Trading were mentioned at Rs. 110.

Banks and Railways—Imperial Bank's fully paid up shares were marked up to Rs. 1,215 and Rs. 298 for the Contributories. Central Bank's shares recorded a few deals round Rs. 21-12.

The usual dealing took place in Light Railway shares but rates show no material alteration. Bankura-Damodar accounted for a deal at Rs. 75, Darjeeling-Himalayan (Ordy.) at Rs. 84-9, Kalighat-Falta at Rs. 74-8 and Mymensingh-Bhairab Bazar (rebate) at Rs. 79-8. Mayurbhanj Railways recorded a deal at Rs. 67 and Shahdara (Delhi)-Saharanpore at Rs. 103.

Government Securities—Opened quiet and a moderate turnover resulted. As the session progressed better tone again prevailed and rates registered all round improvements. 3½ per cent. Government Paper opened at Rs. 82-8 on Monday and fluctuated within narrow limits. At the time of writing the rate improved to Rs. 83. 4 per cent. Loan (1960-70) are now quoted at Rs. 94-12 and 5 per cent. Loan (1945-55) at Rs. 111-8. Other loans also kept steady. The Bank rate remained unchanged at 3½ per cent.

Teas—The undertone remained steady although only a limited business was put through.

JUTE.

(By our Correspondent.)

Thursday Evening.

Comparatively steadier conditions have prevailed in the jute market during the week under review. There has not been much business done either by the shippers or the mills, but an all round bullish feeling that is at the moment prevailing in the commodity markets in general has been responsible for the strength that is noticeable in the jute market.

Statistically the position is not very bullish, the actual arrivals of jute up to the end of February 1933 coming to over 61 lakhs of bales against an estimated crop of 58½ lakhs of bales. Stocks in the hands of Calcutta mills are enough to last for twelve months, while those abroad amount to about 16 lakhs of bales, or about six months supply. The consumption of jute goods show no improvement though the stock position of the latter is far more satisfactory than that of jute. It is too early to say as to what the next crop would be like, but considering the comparatively lower price of rice one is led to think that the new crop is likely to be not very small. The only bull factor in the trade is that the ruling price of jute is very low and unremunerative to the cultivator. But, the force of this factor can be effective only when the trade in general revives and commodity prices improve.

The business during the week was very discouraging, small business being done in ready firsts at Rs. 24. The futures market has ruled between Rs. 25-8 and Rs. 26-8 the quotations at the time of writing are:—

Ready First London ...	£14	7 6
,, Lightnings London	£13	12 6
,, Firsts Calcutta	Rs. 25	0 0
,, Lightning Calcutta	Rs. 23	8 0
Futures March ...	Rs. 27	0 0
,, May ...	Rs. 27	4 0

IN TIMES OF DEPRESSION

A Life Assurance Policy should never be sacrificed. Valuable as it is at all times, its value is enormously enhanced in times of trade depression, with consequent falling incomes and depreciating securities.

Privately estimated crop	...	70 ,, ,,

Dundee.

According to the mail advices the sellers in the Dundee market were not very free at the decline, but at the same time buyers also remained very indifferent. The financial conditions of the U. S. A. have been weighing very heavily on the market.

JUTE MANUFACTURES.

(By Our Correspondent).

Calcutta, Thursday Evening.

Fully steady conditions have prevailed in the market during the week under review. During the middle of the week slightly easier conditions prevailed in the hessian market on the assumption that on the reopening of banks in U. S. A. the dollar may show a considerable depreciation in terms of sterling and as a consequence may lower the price of hessians locally. But, the fears, have proved untrue. On the contrary the dollar-sterling rate has opened more or less unchanged.

The other commodity markets in New York have also reopened with an advance in price and better undertone as compared with the days previous to their closing. The reports received to-day go to show that U. S. A. is likely to negotiate separate commercial treaties with individual countries, not waiting for the outcome of the proposed world economic conference. This had a very healthy effect on the markets and values have shown an alround advance.

Fair business has been done in the market and mills have sold for near positions. The quantity of business was not however very large. The heavy goods section is comparatively easier.

The quotations at the time of writing are:—

	Rs.	A.	P.
Hessians 40″×8 oz. ...	8	6	0
,, 40″×10½ oz ...	10	12	0
,, 50″×10 oz. ...	10	0	0
,, 45″×11 oz. ...	11	0	0
Australian Cornsacks ...	22	8	0

B. Twills	22	0	0
Liverpools	25	4	0
Grainsacks	52	0	0
Sugar Bags	25	0	0
Heavy Cees	21	4	0
Light Cees	21	0	0
E. Bags	17	8	0
D. W. Flour Bags ...	26	0	0
Salt Bags	19	2	0
Wheat	11	8	0
Woolpacks	1	1	0

Dundee.

During the air mail week the number of enquiries received were fairly large, mostly through the British Industries Fair but the amount of actual business done was rather small. There are buyers in the market but the price offered is too low to be acceptable to the sellers. Sacking and bagging sections are specially very quiet. Linoleum hessians are dull and quiet. Enquiries from U. S. A. are very poor mainly due to the closing down of several linoleum factories there.

In the yarn sections sellers are keen for business but the well known spins are available at the best prices and not at a discount.

COTTON.

(By our Correspondent).

Bombay. Thursday Morning.

During the week under review the cotton market ruled steady but quiet with an easy tone towards the close. During the earlier part of the week the market ruled fully steady with a further advance in price. The same, however, could not be maintained as there was free selling by long bulls and Japanese houses. The commodity markets in New York are due to open to-day and what turn they will take in the course of the next few days is very difficult to predict.

The export enquiry in the Bombay market is very poor. There has been a little better enquiry from China but the prices offered are below the present parity. The purchases by the Indian cotton mills are very poor. The demand for cloth is very disappointing, the stocks of cloth with the various mills are far too heavy, consequently their purchases of cotton are confined to immediate requirements only.

The quotations at the time of writing are:

	Rs.	A.
Broach April/May	186	0
,, July/August	192	0
Oomras March	171	0
,, May	170	0
Bengal March	152	0
,, May	150	0

According to the East India Cotton Association report the receipts into and exports from Bombay of cotton up to March 10, were:

Receipts for week ending 9th March.

BULLION.

(By Our Correspondent).

Thursday Evening.

Gold.—Since reporting last week there has been not much change in the gold market. The banks in U.S.A., have opened and exchange business is being transacted now. On the reopening of banks it was expected that the London-New-York cross rate may open higher, that is, dollar may depreciate. But actually the dollar-sterling rate opened at $3.40. Since then there has been a slight improvement, the rate advancing to $3.46.

The local gold market has been not affected in the least, the value remaining at almost the last week's level.

Stocks in Bombay and Calcutta are estimated at 2 lacs of tolas ; daily offtake amounting to about 20 thousand tolas at both the places taken together.

World Output.—During the past ten years there has been a steady rise in the world production of gold, the year 1932, being a record one for the gold production:

The annual output was:—

1923	17.79	million ounces.
1924	19.03	,, ,,
1925	19.02	,, ,,
1926	19.34	,, ,,
1927	19.43	,, ,,
1928	19.70	,, ,,
1929	19.50	,, ,,
1930	20.83	,, ,,
1931	22.81	,, ,,
1932	23.50	,, ,,

The increased output of the Transvaal and Canada has been chiefly responsible for the improvement. The Canadian production has increased from about 1 million ounces in 1922 to 3 million ounces in 1932. After transvaal, Canada is the biggest gold producing country in the world.

The following table shows the comparative changes in the production of gold in different countries during 1931 and 1932:

Transvaal	10.87	11.55
Canada	2.69	3.05
U. S. A.	2.21	2.50
Russia	1.70	1.70
Australia	0.59	0.70
Rhodesia	0.54	0.57
S. America	0.58	0.64
Mexico	0.62	0.60
West Africa	0.25	0.29
India	0.33	0.32
Other countries	2.40	1.56

Silver.—Erratic fluctuations were the feature of the week. While reporting on Thurday last the quotation was Rs. 57-8 per 100 tolas, or a gain of about Rs. 3 over the previous week. Further rise took place in the local market in the middle of the week, when prices almost touched Rs. 60. The market was not supported, both Chinese and Indian profit takers selling in London market with the result that London prices fell suddenly from 18¾d., to 17 11/16d., a simultaneous drop taking place in New York, where the fall was equally sharp from 30 cents to 27½ cents. The local market by the same token slumped from Rs. 59-8 to Rs. 56-12 a small recovery however taking place towards the close. The trend of he market is very uncertain, the speculators have fully bulled ; the bears also have covered.

Stocks in Bombay and Calcutta are estimated at about 6,000 bars the daily offtake being maintained at 40 bars, taking both the places together.

World Output.—As opposed to gold, the world production of silver during the past ten years has shown a decline. During the first eight years the production was more or less maintained. The decline during 1931, and 1932 was, however, considerable.

	Million Ounces.

ZENITH LIFE
SAFETY FIRST
ASSURANCE
CLEAN SERVICE
COMPANY LTD
JUST-FAIR
OF BOMBAY
DEPENDABLE

World Requirement.—Along with the decrease in production there has been a corresponding decrease in the consumption of silver. During 1931, India imported about 53 million ounces of silver, while during 1932, her imports—less exports, amounted to about 2.5 million ounces only. The imports in China during 1932, have of course come to 51.5 million ounces or only slightly below the 1931 figure. The total amount of silver purchased during 1932, for minting purpose is estimated at about 45 million ounces, out of which Germany is believed to have taken 20 million ounces and Mexico about 23 million ounces.

It is very difficult to estimate correctly the trade requirements of silver, but, according to the details available there has been a considerable reduction in the same during 1932, which is estimated to be 25 per cent. less when compared with 1931.

The estimated supply of demonetised silver during 1932, was nearly 48 million ounces. This taken togetlier with 160 million ounces produced from the mines makes the total visible supply of 208 million ounces. Against this the actual consumpton is estimated at 162 million ounces as below:—

China	50.5
India	5.5
Coinage	45.0
Trade	60.0
Total ...	162

The balance of 46 million ounces is to be found in the accumulated stocks of silver in London and elsewhere.

The forecast for 1933, is that while the production will certainly continue to remain low, the supply through demonetisation will be much less than what was available in 1932. The stocks are no doubt heavy but the recent move taken by U.S.A. will in the long run go to raise the price of silver rather than depress it.

Bullion.—The following statement shows the exports and imports into India of bullion for the week ended March, 11, and the corresponding week of 1932:

(In thousands of rupees.)

	1933.		1932.	
Imports from Foreign Countries by sea into—	Gold.	Silver.	Gold.	Silver.

TEA.

(By Our Correspondent).

Calcutta, Thursday Evening.

There was no tea sale in Calcutta during the week.

London Auctions:—At the London auction on Monday last 23,000 packages of Indian tea were submitted for sale. There was an active demand for all descriptions. Prices of medium and common teas were in favour of sellers.

The following were the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day's auction per lb.
Common Pekoe ...	7½d.	7⅝d.
Common Broken Pekoe ...	7¼d.	7⅜d.
Common Orange Pekoe ...	7¼d.	7⅜d.
Common Broken Orange Pk. ...	7¾d.	7¾d.
The following are the value prices:—		
Clean Common Pekoe ...	7⅝d.	7⅝d.
Clean Common Broken Pk. ...	7⅞d.	7⅞d.
Clean Common Orange Pk. ...	7⅞d.	7⅞d.
Clean Common B. O. Pk. ...	8d.	8⅛d.

The Tea Brokers Association, London, report for the week ending March 2, 1933, as follows:—

THE OFFICIAL FIGURES OF THE STOCK IN THE WHOLE OF THE UNITED KINGDOM, AT 31ST JANUARY, 1933, AS ISSUED BY H.M. CUSTOMS ARE 289,591,000 LBS.

Indian.—MONDAY.—Demand was fairly active, and prices on the whole showed very little change from last Wednesday's rates. Low priced tea was about steady but occasionally showed a slightly easier tendency; medium grades were a little weaker with Broken Pekoes from 8d. to 10d. rather a quiet market. Good liquoring kinds were in keen demand but some of the less attractive Autumnals were irregular and slow of sale.

WEDNESDAY.—Demand continued fairly active and buying was rather more general than on Monday. Low priced tea was fully firm and good liquoring sorts sold well, but, as on Monday, medium grades, including some of the poorer Autumnals, were very irregular and in many cases failed to reach valuations, Southern India tea were in strong demand: several invoices showed improved quality, which was appreciated by buyers, and prices marked an advance.

Quotation for Clean Common Broken Pekoe Souchong, 7½d.; last sale 7½d.; corresponding sale, 1932, 6½d.

QUANTITY ADVERTISED FOR NEXT SALE 46,588 PKGS. ON GARDEN ACCOUNT. NORTHERN INDIA 40,911 PKGS. SOUTHERN INDIA 5,677 PKGS.

Ceylon.—The quantity of the offerings was very attractive. The finest invoices sold at firm prices, but the good medium Broken Orange Pekoes between 1s. 2d. and 1s. 8d., especially when rather light in liquor, usually sold below valuations. Common and poor mediums were about steady. There was an active shipping demand for leaf grades. The following are the highest prices realised:—Broken Orange Pekoe, 3s. 4¾d.; Broken Pekoe, 2s. 5½d.; Pekoe, 2s. 8½d.; Flowery Orange Pekoe, 2s. 2d.; Orange Pekoe, 2s. 7d.; Broken Orange Pekoe Fannings, 3s. 3½d.; Fannings, 2s. 6½d. per lb.

WHY YOU SHOULD SHOP AT CURRIMBHOY'S

There are three chief reasons why you should shop at Currimbhoy's. Firstly, you can be certain that the very best quality cloth is being supplied to you because you can rely on the famous Currimbhoy group of mills where the cloth is made. Secondly, you are supporting Indian Industries when you purchase at Currimbhoy's Cloth Depot. Thirdly, Currimbhoy's fabrics are unequalled in India for their durability and lasting colours.

BUY SWADESHI FABRICS

CURRIMBHOY'S

CLOTH DEPOT, 156, HARRISON ROAD, CALCUTTA

C. I.

QUANTITY ADVERTISED FOR NEXT SALE 24,157 PKGS. ON GARDEN ACCOUNT.

Java and Sumatra.—There was an active market, showing very little change on last week's rates. Tippy tea was in strong demand. Export enquiry was less in evidence, particularly in the case of Orange Pekoes, which declined about ¼d. per lb.

China.—There is a good demand for most grades of Keemun up to about 1s. 9d. per lb., particularly for those in the region of 11d. to 1s. 2d. per lb. Old Season's teas still attract attention up to 7d. per lb.

EXPORTS (per Telegraphic advices)—

CEYLON TO U.K.,		
16th—28th February, 1933 ...	5,500,000 lbs.	(approx.)
TOTAL 1st—28th February, 1933 ...	11,000,000 lbs.	do.
TOTAL CEYLON to all Countries,		
1st Jan.—28th Feb., '33 ...	21,250,000 lbs.	do.
17th—29th Feb., 1932 ...	5,232,161 lbs.	(actual)
1st—29th Feb., 1932	10,986,705 lbs.	do.
1st Jan.—29th Feb. 1932 ...	24,617,002 lbs.	do.

RUBBER.

(By Our Correspondent.)

Calcutta, Thursday Evening.

During the Air Mail week, in London the rubber market has ruled dull and the tendency has been easier. This was not due to any intrinsic weakness in the commodity itself, but was the outcome of the influence caused by the outside markets, following the developments in German politics and financial trouble in America.

The statistical position is however encouraging. The exports from Batavia during January were smaller than those in December. The total gross shipments from Malaya for February amount to 37,564 tons against 46,000 tons in January 1933 and 42,000 tons in February 1932.

World Consumption.

The consumption of rubber by the principal countries of the world, during the past three years is estimated as below:—

	(In thousand tons).		
	1930	1931	1932
U. S. A.	376	349	313
England	74	77	85
France	67	48	48
Germany	45	39	44
Belgium	11	11	9
Canada	29	25	21
Japan	32	43	56
Russia	17	30	28
Australia	5	7	13
Italy	15	10	14
Others	32	37	40

PIECEGOODS.

(By Our Correspondent).

Calcutta, Thursday Evening.

On account of the Holi fastival, the market has remained closed for the better part of the week. The conditions, however, remained very dull. The rise in the price of cotton had a steadying effect on the price of cloth. This steadiness in price has hindered rather than helped new business. There has been a rise in the values of staples, and should further advance take place or at least the rise be maintained, it may be expected that better consuming demand may set in; otherwise the market will again drop down in the course of the next few weeks.

IMPORTS IN FEBRUARY.

The total number of packages imported into Calcutta from all producing countries, including those from Indian ports, during February are returned at 38,873 packages. This compares with 34,450 packages for the corresponding period last year; 42,442 packages for January; 38,088 packages for December and 45,864 packages for November. The following table shows, with comparisons, importations from the three main sources of supply for February and in the four preceding months:—

	From Gt. Britain	From Japan	From Indian Ports.
October ...	4,284	18,095	24,598
November ...	4,384	15,997	22,562
December ...	4,358	12,628	18,622
January ...	6,340	11,687	22,399
February ...	5,269	9,740	19,999

The present high duties on goods of non-British manufacture appear to have had some slight success in causing a contraction of imports of Japanese goods.

A £2,500,000 scheme is being launched by the Manchester cotton trade, which is forming a Lancashire Co-operative Society in an effort to recapture foreign markets with the aid of lower production costs and improved marketing. Features of the scheme will be the supply of lint cotton direct to spinners, bulk purchases of coal, dye-stuffs etc., a centralized orders agency, a trade intelligence service and world distributing agencies.

SUGAR.

(By our Correspondent).

Thursday Evening.

The market during the week under review has ruled slightly easier with prices practically unchanged. By the arrival of S. S. Bintang with fresh shipments, 2,000 tons of sugar have been added to the present stocks. The stocks in the market are yet not very large, amounting to a little less than 4,000 tons. The stocks at the main Indian ports are:—

		(In bags, 10 bags=1 ton) 1933		1932
Calcutta	(8th Mar.)	44,000	(9th Mar.)	62,720
Bombay	(,, ,,)	50,000	(,, ,,)	235,000
Karachi	(10th ,,)	50,000	(11th ,,)	220,000
Madras	(6th ,,)	14,000	(7th Feb.)	45,000
Rangoon	(,, ,,)	19,060	(29th ,,)	25,180

The quotations at the time of writing are:—

Java White Ready ...	...	Rs. 10	6 0
,, ,, Afloat ...	...	,, 10	6 0
Cawnpore Ready ...	...	,, 9	14 0

World Markets have ruled on the whole steady with a fair amount of business passing. The N. I. V. A. S. is reported to have further increased the selling limit by 1/8 F., mainly on the strength of diminishing stocks in Java. The plantings in Java for 1934 are the smallest since 1900, and the crop is estimated to yield half a million tons less than the previous season.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

SUPPORT TO GILTEDGE.

In a friendly way, we were informed, the other day, that one, who has been reading *Indian Finance* carefully and has appreciated its worth, made, however, the complaint that there is too much reiteration in our columns. We plead guilty to the charge. In extenuation, we would only urge that to the extent that *Indian Finance* has never been content with mere haphazard and pointless comments of momentary significance and has always stood for definite principles and put forward positive suggestions, it could never miss any occasion when it should reimpress and emphasise those principles, and reinforce a plea for those suggestions. Once a journal is committed to the policy of viewing all problems only from the standpoint of constructive criticism—we have ever laid stress on the constructive rather than the critical aspect—the whole range of national or international happenings gets reduced, at bottom, to this principle or that, or in terms of this suggestion or that, for which the journal has come to stand. It has, thus, happened that all questions relating to ways and means budget of the Government; or the money market; or capital market; or Government's borrowing policy and programmes; or interlinking between exchange and money markets; or kinship between domestic and international markets, have, in our view, served only to emphasise the importance of the suggestion put forward by us that the prime duty of the State is to do everything possible to keep its giltedge securities at a healthy price-level; and that, towards this end, the appropriation towards the Debt Redemption Fund must be utilised for purchases of securities from the open market, so as to lend necessary and suitable support to giltedge. Similarly, all problems connected with the failure of budgetary realisations to come up to budget expectations; the reduced consuming power of the masses; the shrinkage in trade; poor railway earnings; unemployment; country-wide economic depression; efflux of distress gold—these have revealed, in all vividness, the necessity for the identification of the State with a comprehensive and enlightened national economic policy and for the creation of a National Economic Council whose duty it would be to take all those measures that would further, improve and strengthen the economy of the country. By the same token, whenever we hear of the absolute necessity for a Reserve Bank in relation to impending constitutional reforms; or of the important part that a sound currency system plays in the economic life of a nation; or of the need, in the case of a country like India with large recurring external obligations, to maintain adequate and substantial reserves, we cannot but recall with regret that the advice of *Indian Finance* in regard to purchases of gold by the Government in the same way as the Bank of England has been doing has not been heeded to by the authorities.

Taking a hurried view of the proposals which we have been urging with persistence and vehemence in the past few months, we believe that the most outstanding are the following:

(1) the need to utilise the sinking fund for open market purchases of securities;

(2) the establishment of a Supreme Economic Council;

and (3) the securing, for the currency reserves, of some portion of the gold that is now being disgorged by India.

We have shown how questions, apparently disconnected with one another, could, however, have a real link in the sense that they are reduced to one or other of the proposals sponsored by us. That we are able to view most problems in a manner that admits, in an analysis of the fundamentals, of an interpretation in terms of the principles specifically and categorically outlined by us may mean wearisome reiteration; but it also shows, we urge, a capacity on our part to study all problems from a broad and unifying standpoint.

* * *

As an indication of the soundness of the proposals with which *Indian Finance* has been identified, we may take the instance of the utilisation of the sinking fund for providing support to the securities market. This is a suggestion for which we have carried on ceaseless propaganda. On this suggestion, we have interviewed the highest officials in the Finance Department, time and again. This suggestion has been put forward, with great force and cogency, by many members in both the houses of the Central Legislature. Despite such reiteration on our part, the Government could not see their way to accept our suggestion till three months ago. That they did, at long last, take action on the lines indicated by us must be taken, we venture to think, as final and conclusive testimony of the soundness and aptness of our proposal. But even more impressive testimony is furnished by an examination of the results arising from the Government's adoption of the suggestion. We have, as yet, no definite or authoritative evidence of the Government's buying of securities on a large scale with the deliberate object of improving the health, and firming up the tone, of the giltedge market. But from elaborate enquiries made both in Calcutta and Bombay markets, we are in a position to say, definitely, that, in the past three months, considerable purchases have been made by the Imperial Bank, acting on its own behalf and on behalf of the Treasury. We maintain that these purchases, in so far as they relate to the latter, will be financed by the amounts available in the Debt Redemption Fund. The monthly statement issued by the Controller of the Currency as regards the Rupee Debt of India should afford confirmation of the view advanced by us; but for such confirmation, we will have to wait, possibly, another two or three months as the Notification in the *Gazette of India* is considerably belated. But it is possible to make some sort of a connected story from the weekly returns of the Imperial Bank; and it is interesting to interpret the figures disclosed in the periodical statements of the Bank in the light of the progress of the last conversion loan.

* * *

In this quarter, the Government have issued two loans—the first was a 4 per cent. 1943 cash loan at an issue price of Rs. 98; and the second was a 4 per cent. 1960-70 conversion loan pertaining to three loans of an aggregate total of Rs. 50 crores. The cash loan, which was limited to Rs. 15 crores, was subscribed within a few minutes; and this success was due to the fact that, for the first time in the last four years, the authorities had the courage to issue a new loan on an an yield basis lower than that forthcoming on existing securities on the eve of the loan. The conversion loan has resulted in holders of Rs. 33½ crores of the eligible bonds exercising the option. The favourable result in the latter case was due to the steps taken by the Government to see to it that the 4 per cent. 1960-70 loan was quoting in the market at a rate which would induce the holders of 5 per cent. 1929-47 loan, 6 per cent. 1933-36 bonds and 6 per cent. 1933 bonds, to assent to conversion. Telegrams:—"IRONCO

time when the terms of the conversion plan were made known, 4 per cent. 1960-70 was quoting roundabout Rs. 93. For the first few days, there was a reactionary tendency manifest in the market. At that time, we wrote that the aim of the authorities should be to bring up the price of this scrip to Rs. 94/8 or Rs. 95. The Finance Member, in conjunction with the Imperial Bank, did take steps to bring about such an improvement in prices.

We could have no information as to the arrangement between the Treasury and the Bank. But from a shrewd understanding of the figures in the weekly returns of the Bank, we are inclined to infer that the Government and the Bank were partners in the transactions that were put through in this behalf. The four statements between February 3, and February 24 show that the Bank increased its giltedge investments by Rs. 4 crores ; and that, in the two weeks following, there has been a shrinkage in the giltedge portfolio of Rs. 1½ crores. Our own interpretation of these changes under the head Investments in the Bank's statements is that, in order to pull up the prices of securities, it was found necessary to buy scrips like 3½ per cent. paper and 4 per cent. 1960-70 loan to the extent of Rs. 4 crores ; that, in these purchases, the Bank and the Treasury went half and half ; that an adjustment of the transactions between the two has now taken place by the Imperial Bank handing over a part of the purchases, the effect of which operation is seen in the latest return of the Bank. We give below the total showing the variations in the giltedge portfolio of the Bank :

Date.			Amount in lakhs.	Increase or decrease on previous week.
February	3	...	32,15.71	+96.79
,,	10	...	33,50.13	+1,34.42
,,	17	...	34,12.89	+62.76
,,	24	...	35,27.70	+1,14.81
March	3	...	35,20.61	−7.09
,,	10	...	33,77.44	−1,43.17

We may now turn to the progress of the conversion loan. We give below the results as they were announced, from time to time, by the Controller of the Currency :

Date.	Conversion Results. Amount in lakhs. Increase or decrease
Up to February 4	Rs. 7 crores.
,, ,, 14	,, 12 ,,
,, ,, 18	,, 19 ,,
,, ,, 25	,, 26 ,,
,, ,, 27	,, 30 ,,
,, ,, 28	,, 33.31

It will be seen that in the ten days following February 19, as much as Rs. 14½ crores was received. This was also the period during which the Imperial Bank bought considerable securities from the market. A direct result of these purchases has been that prices of leading scrips like 3½ per cent. Paper and 4 per cent. 1960-70 loan showed substantial appreciation ; and a direct result of this appreciation in prices is that holders of the bonds covered by the conversion plan were stimulated to a keener interest. We have been of the view that we have not yet seen the last of the conversion programme. In fact, the next instalment of this programme would already have been announced but for the unsettlement caused by the American crisis. The markets are already showing signs of good recovery from the shock. If the situation improves substantially—as we believe it is bound to—there is every reason why the Government should continue their present policy of supporting the securities market, thereby facilitating the early announcement of the next phase of conversion. For the operations connected with such support to securities, the Government have ample resources as the new budget, which dates as from April 1, has a provision of nearly Rs. 7 crores, and as this sum could be made available any time after April 1.

AFTER THE CRISIS IN AMERICA.

To a world accustomed in recent years to numerous crises of far-reaching consequences, the moratoria and embargos in America inevitably seemed the beginning of yet newer trials for world trade and finance. Such pre-disposition to fear was strengthened by the inexplicable and indefensible paucity of news from abroad during the week which ended with Saturday last. Though for our part, we tried to see the soul of good in the evil which apparently had engulfed America and the world, we must still confess to an inability to foresee the comparatively quiet resumption of business that has since come about. Our editorial comments on this question were on a purely hypothetical basis; and we are glad that we were able in time to afford in our columns last week a stop press message from our London Correspondent which should have gone a long way towards giving a clear idea of the prevalent position and the developments immediately ahead. Our Correspondent dealt in his opening sentence a much-needed corrective to the fear that America would go off the gold standard and a period of rising prices in America and falling dollar abroad was awaiting world trade. It is interesting to find that the London press in Air Mail week devoted considerable space to the American developments and was generally of opinion that there was no danger to the gold standard in America. The Midland Bank Bulletin contained a thorough examination of the question, leading to the unmistakable conclusion that there was neither necessity nor incentive for America to go off the standard. It would have been considerably helpful, if news agencies had communicated this opinion to other parts of the world; and we are gratified that we were able to make good that deplorable omission.

* * *

For those who had read the special cable of last week, the events of this week would not have come as a surprise. It would have led them to expect what has actually happened since, the speedy return of gold from the hoarders to the banks, the rushing of 2,000 million dollars of additional currency and last, but not least, the reappearance of quotations for the dollar at about the same level as of old. During the week there has been no serious fluctuation in the cross-rate, and such as there is might have happened even if the crisis of the week before had not intervened. But it must be remembered at the same time that business could not have revived in the same proportions as of old. America has a foreign exchange dictator—no ominous name, considering the new vogue as well in India as in foreign countries—in Mr. Frederick Kent, a prominent New York banker. Presumably, Mr. Kent will perform dictatorial functions till such time as may be required for the resumption of exchange dealings on a normal basis. As for internal banking business, some institutions have restricted withdrawals to necessity and others have forbidden excessive payments which are obviously intended for hoarding. In almost all cases, customers are required before making withdrawals to sign an undertaking that the money would not be hoarded. But the most encouraging feature is assurredly the return of gold from the hoards. And Mr. Woodin, Secretary of the Treasury, makes a just claim when he says that the "era of fear" has completely passed. Bank deposits

exceed withdrawals and business has been resumed on the New York stock exchange.

* * *

The crisis has provided Mr. Roosevelt the psychological moment in which to push through his plans of financial reform. The gravity of the situation may be imagined from the fact that the deficit for 1933 will probably exceed 1,200,000,000 dollars, exclusive of the loans made to the Reconstruction Finance Corporation and that, unless immediate action is taken, 1934 might end with a figure of 1,000 million on the wrong side of the books. The Government have to refund 100 million dollars of short-term debts in the spring. Taking all this into consideration, as also the nervousness caused by the banking crisis, the President launched an attack on the bonus of war veterans for a saving of 300 million dollars. A 15 per cent. cut in salaries would raise the saving to 400 to 500 million. Mr. Woodin has announced "that the Treasury will sell two short-term issues totalling 800,000,000 dollars Treasury certificates on March 15 to meet the maturing indebtedness of certificates totalling 695,000,000 dollars, and raise about 59,000,000 dollars to meet public debt payments. The issues will bear 4 and 4½ per cent. interest, respectively." Doubtless, the authorities are bringing the situation well in hand. But the problems of American finance and banking, which are dealt with at length in the "Overseas' News" section call for patient and courageous handling; and the succeeding months will show whether American leadership is fully equal to the tasks with which it is faced.

YOUNGEST ASSEMBLY PRESIDENT.

"Eavesdropper" writes:

To *Indian Finance,* and to me in particular, Mr. Shunmukham Chetti's election as the President of the Assembly is a matter of special gratification. I have never concealed my view that amongst public men in India, Mr. Chetti is the best informed in financial and economic matters, with a clear understanding of the fundamentals, a comprehensive appreciation of the ramifications and intricacies, a keenness to be, at the same time, abreast of events and accurate in details. The ways and means budget has ever engaged his special study; and his criticism in this regard has shown, at once, a clarity of outlook and a knowledge of day-to-day happenings in the money market. With *Indian Finance,* he fought for reinstatement of a wholesome and scientific credit policy for the Government; and he was the most convincing advocate in the Assembly of the proposal, put forward in these columns over three years ago, to utilise the Debt Redemption Fund for open market operations with a view to support securities when prices tend to sag unduly. But Sir George Schuster was not convinced at the time. It is satisfactory, however, that, at long last, the Government of India became converts to our view, and initiated action on the lines indicated, in the past few months. Result? The fifteen crores cash loan was an instantaneous success. The conversion loan of February produced striking results. We have, thus, come to look upon Mr. Chetti as a stalwart representative, in the Assembly, of the *"Indian Finance* School of Thought." From this point of view, his elevation to a status in which he can belong to no school may well mean that the voice of *Indian Finance* in the Central Legislature will be less impressive and lusty than heretofore.

* * *

I am, therefore, fully hoping that Mr. Chetti will not care to occupy the chair for a period longer than the interregnum up to the coming of the new constitution. Then, we are sure to find him back in a station where he can be a partisan, with definite views, aggressive programmes and constructive plans. I

may also prophecy that he may not be long in the Opposition. He may, for aught I know, be the first Indian Finance Minister ; but the point to be emphasised here is that unlike the President, a minister of the Government has full scope for definite views, aggressive programmes and constructive plans. Mr. Chetti is too ambitious, too keen on doing things in a way that bears the impress of his personality, to be content with an office which expects him to fill a non-committal *role*. The Presidentship is good enough for a year or two ; Mr. Chetti will feel bored if he has to stay longer. He must be back in the thick of the fight, revelling in thrust and counter-thrust. Incidentally, the Madras Local Board of the Imperial Bank, which was just congratulating itself on securing a keen and able member, will not be happy over a change in fortune which deprives it of one, on whom everyone was placing great hope for great achievement in behalf of a circle which had come to be in the shadow by the side of resplendent Bombay and Calcutta.

BOMBAY PORT TRUST FINANCES.

The memorandum of the Chairman of the Bombay Port Trust on the Budget estimates for the year 1933-34 reveals a comparatively 'safe' position and a sound policy. It is in refreshing contrast to the doleful tale which the Chairman of the Calcutta Port Trust had to recite the other day. The Commissioners of the Calcutta Port are for the convenient and complacent view, that the position is never so bad as to call for radical financial reform and that nothing can be said against a policy of increased charges and fresh borrowing to meet the current expenditure. Their confreres of the Bombay Port Trust realised long ahead, with commendable forethought, the urgency of economy in expenditure without detriment to efficiency or development, and the measures they took to retrench expenditure are now bearing fruit. The reserves built up in the past years have not been much encroached upon, though naturally, it is not possible for an undertaking so completely dependent upon international trade as a Port Trust, to claim that they have been able to balance revenue and expenditure all through this slump.

* * *

The revised estimates for 1932-33 show that while there is a reduction in expenditure of Rs. 6 lakhs on the original etismate, there has been a diminution in the receipts to which unforseeable causes contributed to no small extent. The original estimates were framed on the assumption of normal conditions of life and on the expectation of a general improvement in trade during the year 1932. While the expectation was cruelly belied, the serious Hindu-Muslim riots which took place in Bombay in May and beginning of August in 1932 brought about a sharp decline of over 25% in the volume of transactions handled by the Port Trust in the period ending September 1932, as compared with the corresponding period in 1931. To meet the alarming shortage in revenue, the committee were constrained to impose some additional charges in the form of a temporary surtax of 12½%, import wharfage on kerosine and fuel oil and increased charges for the use of the dock and harbour tugs; which were expected to yield about 7 lakhs in the latter half of the year.

* * *

The forecast of the year's working was a deficit of Rs. 8.65 lakhs, and by September 1932, it was feared that even with the surcharges, the deficit would have to be about Rs. 41 lakhs. But things improved a bit in the latter half of the year. Against an original estimate of Rs. 242.46 lakhs, the revenue for 1932-33, according to the revised estimate is Rs. 225.81 lakhs. The revised expenditure (inclusive of Rs. 128.18 lakhs for debt charges) is put at Rs. 245.12 lakhs, a reduction of Rs. 6

lakhs on the original estimate. The final deficit for the year is estimated at Rs. 19.31 lakhs.

* * *

In seeking to justify the increased charges, the Chairman urged that the Port of Bombay had the unique distinction of having avoided any major additional charges in the previous decade. Not only that, but, in the same period, the administration was able to afford relief to trade by way of reductions and remissions to the extent of Rs. 1 crore. "This was rendered possible by the curtailment of all capital and revenue works to the barest minimum,—thereby enabling the Port to avoid any new borrowing or increase in its capital charges for eight years in succession,—and by drastic retrenchment in all controllable items of revenue expenditure, a policy inaugurated by the Retrenchment investigation of 1924-25 and since pursued year by year with systemmatic thoroughness." Curtailment of capital expenditure is one of the methods of reducing expenditure which the paucity of funds in these troublous times has forced upon all public bodies. It is nevertheless necessary to sound a note of caution, for, the starving of capital outlay to the extent of impairing development and efficiency, is to be deplored. Retrenchment of establishment charges to the minimum consistent with efficiency of it and the avoidance ol wastage are always to be welcomed, even apart from the special conditions prevailing now. The result of the measures taken betimes by the Bombay Port Trust has been to reduce controllable expenditure by some Rs. 31 lakhs a year, or nearly 30 per cent. as compared with the figures of 10 years ago. But it must be remembered that a considerable portion of this saving represents deferred expenditure, which must be incurred at some time in the near future. Thus there is the danger of the present benefitting at the expense of the future. Such expenditure should be judiciously spread over several years. But the comparative solvency of the Port Trust finances and the fact of the shrunken outturn of transactions are a sufficient justification of whatever drastic economies they might have effected in the past two years.

* * *

In 1933-34 the Finance Committee expect a betterment of trade, especially as there are some indications of inter-national co-operation and the generally substantial crops of 1932, are, largely, yet to be exported. Anticipating an increase in the volume of trade, the estimated revenue for 1933-34 (including pilotage and special receipts) is Rs. 245.06 lakhs. The estimated receipts from direct trade sources are more by only Rs. 4½ lakhs or 2 per cent. than the actuals for 1931-32. Taking credit in one lump sum for the savings from the emergency cuts, the total estimated expenditure in general account is Rs. 245.81 lakhs, as compared with the actual expenditure of Rs. 250.50 lakhs in 1931-32 and Rs. 245.12 lakhs; the revised estimate for 1932-33. The anticipated result, therefore, is a rough equilibrium between revenue and expenditure, the budgetted deficit being only Rs. 75,041 to be met from the Revenue Reserve Fund.

* * *

As regards capital expenditure, the revised estimates for 1932-33 show that Rs. 7.18 lakhs have been spent on capital account against an original provision of Rs. 2.86 lakhs, the increase being chiefly due to supplementary grants sanctioned during the year for some very necessary works. This ought to bring home to the Committee that they cannot reduce capital outlay beyond a reasonable amount. The estimate for 1933-34 aggregate Rs. 4.94 lakhs. The principal item is Rs. 4 lakhs for part of a new drag suction hopper dredger which it is proposed to order, for the economical and efficient dredging operations. The estimated loan balance on hand on April 1, is Rs. 3.57 lakhs against the budgetted expenditure of Rs. 4.94 lakhs. The Port Trust proposes, therefore, to raise Rs. 5 lakhs by temporary borrowings which will be adjusted in the loan programme of 1934-35.

A mixed reception has been accorded to the remarks I made on South Indians in last week's issue. Shankar, the strube of Indian journalism, who daily delights the readers of the *Hindusthan Times* by his apt and piquant cartoons, has found a succulent theme for caricature in my description of the Madrasee as showing no lack of adventure or go-aheadness. Banker Rangaswami has written to Scribe Rangaswami, approving of the view advanced in this column. Scribe Tyson, however, has pulled me up with the taunt that as Eavesdropper, the Prophet, was, probably, not honoured in his own country, Eavesdropper's chatter on his fellows was marked by a "sting in the tail". G.L.M. has assured me that he vastly enjoyed my character study. The Editor has been struck by the justness and truth of my pen-picture including that of himself as my junior in age but senior in judgment. A correspondent, who is not only a careful reader of *Indian Finance*, and has not only an inconveniently sharp memory for earlier statements made therein, but has a provoking way of recalling them and posing the query "what about it?", has written in, pointing out that he was less interested in vague generalisations about the Madrasee's character, than in concrete facts and figures bearing on South India's economy.

* * *

"You draw a glowing picture", he says, "of the thirty cotton mills, thirty sugar factories and a good few oil mills that can be started in Madras Presidency. This is a vision of the future. What of the fact of the present? What about the cotton mills now in existence ; are they squealing for help, all the time, like their confreres in some parts of Northern India? What about the sugar companies under the management of Parrys ; are they, too, in the same crude, clumsy and plan-less state of development? What about the Tata Oil Mills ; is there any hope of the old record of Rs. 400 per share being touched? Give us some news of the matters that matters now and here. In your mid-week Supplement dated March 7, on the American Crisis (on which, by the way, I should heartily congratulate you for a notable service in giving a timely and clear lead to a dazed market), *Indian Finance* observes :

> 'In the last one month, we had opportunities to study this problem at a good many centres in South India ; and our enquiries go to confirm the correctness of the view that it is the small holders that have sold gold in large part and these sales have been entirely due to extremely distressing economic conditions'.

I presume that the opportunities of *Indian Finance* to study the 'distress' gold problem in South India mean really that you, in your last tour, made investigations on the spot at a number of centres. Why can't you give us some news of those investigations? This should prove—to use one of your own well-worn phrases—far more interesting and instructive than a thesis on the clear but narrow outlook of the Madrasee. The swan-song budget speech of Sir George Schuster contained an elaborate thesis on the wonderful and beneficial phenomenon of gold being pushed out of the mofussil to the ports, and, in turn, being pushed out of the ports to foreign countries. Have you no counterblast to offer? It is a great opportunity for you, I assure you. Seize it —to use another of your phrases—with both hands ; and your readers will devour the stuff with avidity".

* * *

To be sure, a very helpful Correspondent, a very sensible communication, and a very correct lead! The Correspondent has somewhat anticipated me and, thereby, scored a point against me. I did intend to chat on many of the issues raised by him—and especially on the gold situation in South India ; my first article was merely to serve as a background for the picture that was to be filled in later. I visited ten cities and towns in South India and over a dozen big-sized villages. At a good many places, I was only a few hours. Even so, I took particular care to steal an hour or so to call on the *Kasi Chettis* (as the dealers in gold are called), to talk with them over the happenings of the past eighteen months, to understand the various processes and stages in the transfer of gold from the humble agriculturists in India to the puissant central banks of the world, and to analyse the transactions that have actually been recorded in their books. My conclusions after this examination are as under:

(1) Of the gold received by the *Kasi chettis*, 75 per cent. is in lots of less than Rs. 100 per lot.

(2) 15 per cent. is in lots of Rs. 100 to Rs. 200.

(3) 10 per cent. represents lots of over Rs. 200.

(4) In most cases coming under (3), the local people could link the sale with some demand for tax or some expenditure on marriage or funeral on the part of the sellers.

(5) At least 40 per cent. of the gold was received not directly from the owners, but from those with whom it had been mortgaged.

(6) When gold was selling, say, at Rs. 30 per tola in Bombay, the ultimate owners would get about Rs. 25 ; the mortgagee would securt a secret profit from the *Kasi chettis* of Re. 1 to Rs. 1½ ; the *Kasi chetti's* margin would be Re. 1 to Rs. 1½ ; his agent

in the town whither the gold would be sent for refining would pile up another Re. ½ ; the provincial agent of the Bombay dealer adds another Re. ½ ; it lands in Bombay at Rs. 29.

(7) This phase of 'distress' gold has brought about an active and widespread organisation from Bombay bullion dealer down to the *Kasi Chettis* through various intermediate stages ; and the whole organisation has been propagandising the mofussil, advising sale of gold while current prices lasted.

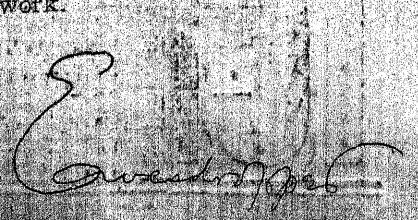
(8) In the ultimate resort, those, who have lent on pledge of gold ornaments, would bring pressure on the borrowers ; and narrate fairly tales of how, owing to rise in price of gold, the latter have an opportunity of redeeming the debt (principal and interest) and get a few odd rupees in the bargain ; and as the borrowers have, on the one hand, not much of an option in the matter ; and, on the other, are attracted by the prospect of receiving a few rupees in final settlement, they would agree to sell and, at the same time, are none too particular about the sale price, as they are impressed by the accruing of a few extra rupees.

(9) It is these "extra rupees" that make it possible for the *Kasi chettis* to buy gold at a price considerably lower than the Bombay price ; and on this fact is built the entire organisation of umpteen middlemen.

(10) Refining is done, on a large or small scale according to needs, in centres like Tinnevelly and Madura. .995 fineness is attained. Gold leaves the villages after the jewels are melted down. The refining is done in the towns. It reaches Bombay where only a final formality of assaying is necessary.

* * *

The most sensational triumph in the late Mr. C. R. Das's sensational but short political career was his complete capture of the Calcutta Corporation. Partly through their own sins of commission and omission ; partly through internecine warfare between rival claimants for power ; but mostly through the relentless propaganda carried on by all the interests antagonised by the Swarajists, the followers of Mr. C. R. Das have lost considerable ground in the citadel captured for them by their chief. The elections, which are to take place at this month-end, will prove crucial ; for, it looks as though the rival camps amongst the Swarajists will, by their mutually destructive tactics, be helping the restoration of the dethroned party. One redeeming feature of the present elections is, however, the vogue of joint electorates, so that purely communal interests will receive a deserved set-back. My friend, Mr. Durga Prasad Khaitan, is sure of election ; and though wearing a party label, he has commanded universal respect for the sincerity of his work and the sturdiness of his commonsense proposals. He will receive great and intelligent support from Mr. A. K. M. Zakaria, who is contesting in Ward No. 7. Amongst Indian exchange brokers, Mr. Zakaria is the most prominent, commands the largest business and is most trusted by bankers. The charm of this youngster is that he knows his business and just minds his business. And I am sure that in the Corporation, to which he is sure to be elected, he will be in live touch with just those matters in which he has special knowledge. Neither more nor less. He will be neither a busybody nor an easy-going slacker. You cannot think of a more harmonious combination of ideal qualifications for one who seeks to serve his City not by tall talk but by useful work.



THE READING ROOM

Some Bengal Villages; An Economic Survey; By N. C. Bhattacharyya, and L.A. Natesan, Pps. 225; Published by the University of Calcutta, 1932.

The study of Indian rural economics is obviously, preliminary to national reconstruction. "India lives in the villages" is the common remark of foreign visitors to this country, though every one of them tries to pass it off as his special discovery or revelation. We ourselves are quite conscious of it, there being few in the urban areas who haven't got permanent ties with a "native village." And yet Indian economics comprises only protection *vs.* free trade, lower against higher ratio, and so on and so forth, without touching the problems of rural economy. If ingenious brains were to set themselves the task of drawing up a Five Year Plan for India, they would probably put the erection of new factories first. Not that factories are to be spurned; but it would show our lack of touch with the realities of the problem. Only at her grave peril, could India neglect the villages either economically or politically.

The Royal Commission on Agriculture laid the greatest emphasis on this fact and strongly pressed "the claim of the rural areas upon the time and interest of the best of India's youths."

This had been anticipated by some of the organisations started by political leaders like Mahatma Gandhi and C. R. Das ; and village reconstruction societies have for some time been giving the corrective to the scholar's weakness for high economics. But their work has been more of a cultural, than an economic, nature. If the economic reconstruction of the villages is to progress on sound lines, the economist's centre of attention has to be shifted to the village. The preliminary study is not only vast in scope, but has to traverse a somewhat trackless region ; and innumerable students will have to engage themselves in it, and persist for some long time, undeterred by the lack of any definite results.

The volume under review is the beginning of a great task and—let us rest assured—a great achievement. Prof. Gilbert Slater of the University of Madras had led the way in that province under conditions which, as a student of Dr. Slater, the writer knows to have been none too encouraging. Mr. Bhattacharyya and Mr. Natesan have attempted to do the same for Bengal ; and the publication is a compilation of the student's work in a few villages. Mr. Bhattacharyya has afforded in his introductory chapter a bibliography of similar works in earlier times which should be useful to those who might feel attracted to this noble work. Mr. Natesan delineates the main features of the problem of rural reconstruction in Bengal. The questionnaire which the two professors gave to their pupils gives a good idea of the purpose of the enquiry and the purport of the essays which follow the introductory chapters. Not the least attractive part of the volume is the foreword of Sir Daniel Hamilton, whose enthusiasm at this new-found interest of the colleges in the village may be easily imagined by those who are privileged to know him.

Doubtless, the students have spent their time to good purpose ; and their professors have done well to bring out in an attractive form of their labours. I trust, however, that neither Mr. Bhattacharyya nor Mr. Natesan makes the mistake of believing that a survey of a few villages takes us any nearer the accomplishment of the tasks which rural India has set them. What is required is the completion of a survey like this for the whole province, the collation of results and the formulation of the problems and the plans to solve them.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN.

DR. SANGRADO SCORES A VICTORY.

The Bank of England continued, in the course of the week, its policy of heavy gold purchases to an even more remarkable extent than heretofore. On one single day alone—Thursday, March 2—the Bank's purchases amounted to £2,370,000. This brings the total gold purchases since the December War Debt Payment up to £32,800,000. Under the operations of the Exchange Equalisation Account, £10,170,000 of the Bank's gold purchases has been offset ; still, the expansion of the credit base effected since December has been enormous, being, in fact, no less than £22,630,000, which works out at the rate of £4,000,000 per week.

Due to the constant accumulation of gold purchases, the Bank of England's reserve, which, only three months back, stood at £24,400,000, the lowest figure within the last seven years, is now £69,053,000, and but for a difference of £2 millions, almost on a level with the Bank's high record for all time.

All conflicting interpretations of the motive underlying the Bank of England's gold policy, have been set at rest by the disclosure of Government's intentions made by the Chancellor of the Exchequer during the week in reply to a question in the House of Commons. Mr. Chamberlain made it plain that the Government intend to embark on a policy of deliberate credit expansion in the hope of raising prices.

> "It is impossible" said the Chancellor, "to isolate sterling prices completely from the effect of falling world prices, but although world prices have dropped by some 20 per cent. during the last eighteen months, the sterling price level has remained remarkably stable. I am not without hope that the policy of cheap money and plentiful credit which has brought about this result may, if contined, lead to an increase of prices, and this process will undoubtedly be greatly facilitated if international agreement can be obtained on some of the present world problems."

It may be recalled that hardly a month ago, Mr. Reginald McKenna, Chairman of the Midland Bank, advocated, with vigour, an expansive monetary policy as the only means by which the level of internal prices could be raised. But the Chancellor almost poured ridicule on the suggestion.

> "I wonder," he said, "if anyone has read the novel *Gil Blas* and remembers the famous character, Dr. Sangrado. He had the same remedy for every patient brought to him—he bled him and made him drink hot water. If he died, that was because he was not bled enough and did not drink enough hot water. Mr. McKenna is a Dr. Sangrado. His remedy is to drink more hot water and to expand the patient more."
>
> The Chancellor had grave doubts whether, by further doses of the same medicine, "we should be able to raise the sterling price when we desire."

If the "grave doubts" of January-end have vanished into thin air by the beginning of March, and the once-sceptical Chancellor has gone so far as to pursue a deliberate policy of credit expansion to raise sterling prices, the change must be accounted a triumph for Dr. Sangrado and his methods, whether the fact is plainly admitted or not.

It is computed by financial experts that "if the whole of the potential credit now available were employed in bank advances, their total could, in theory, be raised by the enormous amount of £336,000,000 or about 44 per cent.—assuming a ratio of deposits of no more than 50 per cent.—without straining the Bank's reserves."

Economy Versus *Wise Spending.*

The campaign of national economy, after touching the high summit of stringency, has now given place to a fresh doctrine of economic adjustment of which, "wise spending" is the main keynote. The Prince of Wales, the Prime Minister, Sir Josiah Stamp and Mr. Stanley Baldwin have all been recent exponents of the doctrine, but its most vigorous advocate is Mr. McKenna who has once again returned to the subject of Government's embargo on capital issues which he touched very lightly in his speech at the annual general meeting of the Midland Bank.

In the opinion of Mr. McKenna, the choice of the right time is the essence of wisdom whether for saving or spending. The need for economy was past, and the time was now ripe for the encouragement of expenditure on sound enterprise.

Mr. McKenna's proposals are :

(1) The abandonment of all remaining restrictions on new capital issues ;

(2) Discriminating perseverance in a policy of abundant money as a fillip to trade and industry ; and

(3) Utmost development of internal and Imperial markets, pending the removal of prohibitions, quotas and tariffs curbing the flow of trade, by means of international agreement and understanding.

British Railway Crisis.

The financial results in 1932 of the four main line railways in Britain, (the London, Midland and Scottish ; the London and North Eastern ; the Southern ; and the Great Western) which are now available, reveal a most gloomy position. The gross receipts for the four companies together fell by more than £15 millions—a decline of a little over 8 per cent. Passenger receipts fell by 6 per cent., while the income from freights went down by more than 10 per cent. The decline in gross receipts was different in the case of the four railways ; it was smallest in the case of the L.M.S. with 7⅓ per cent. fall in revenue, and greatest in the case of L.N.E.R. with 9½ per cent. The other two railways suffered a decline of over 8 per cent. each.

The difficulties through which the railways have been passing have been the cause of enormous improvement in their technical perfection and the cost of administration. The L.N.E.R., for instance, which is the hardest hit of the four railways, effected in 1931 economies amounting to £4,216,000, and, in the succeeding year, a further reduction of £3,010,000 in administrative expenditure. More or less the same standard of achievement was maintained by the other railways as well. What with the prospect of legislation on the lines of the Salter report to remove existing disabilities in road-rail competition, and the further fruits of economy expected under a system of pooling of traffics which has come to be seriously investigated by the main railway administrations, it was fondly hoped that an avenue of greater prosperity than any enjoyed before was in wait for the railways at the expiry of the depression almost as a hidden blessing out of adversity. But during the week, a crisis over the wages question has arisen, involving the whole future of the railways once again in possible chaos and uncertainty.

The four main railway companies have given notice, to the trade unions with whom they have dealings, to abandon in future all reference of any issues in dispute between the companies and their employees either to the central or to the National Wages Board. This means that the machinery set up by the State for the settlement of railway labour disputes has now completely broken down. The four companies have a wages bill of £96,000,000 per annum, and out of their total number of 577,000

Air Mail Week.

employees, 420,000 are affected by the suspension of the two Wages Boards.

These Wages Boards were set up by statute in 1921. It may be recalled that the companies sought the aid of the National Wages Board (consisting of six representatives each of employees and men, four independent members and an independent chairman) to replace the present 5 per cent. wage cut by a 10 per cent. one, estimated to yield a further saving of £4,600,000. The Board was equally divided on the question of the cut, and a deadlock ensued. The chairman, exercising his casting vote, recommended reduction in wages to the extent of £800,000, but the unions refused to accept the award. The present notice issued by the companies is intended to emphasise the futility of a machinery of conciliation which had virtually ceased to operate as such in practice.

Unless a fresh and more satisfactory procedure is devised soon for the settlement of railway disputes, the whole future of the railways may be destroyed beyond redemption by the evil effects of growing hostility between capital and labour within the companies themselves.

Worst Year For Shipping.

While railways have suffered disastrously on account of the depression the plight of British shipping in 1932 was even more depressing.

This was emphasieed, with gloomy authoritativeness, by Mr. Lein, Chairman of the North of England Ship-owners' Association, who said that the past year was the worst he had known for shipping in the whole of his 66 years' experience, and possibly the worst that shipping had ever known.

There is a clamour for Government action to prevent foreigners from taking part in British coastal trade.

Death Duties and Insurance.

The speech of Sir Edgar Horne (Chairman) at the annual general meeting of the Prudential Assurance Company held this week, must be full of interest to the administrators of insurance funds the world over. After expounding the sound financial position of the company reflected in the aggregate market value of investments being far in excess of the aggregate book value, without taking into account any reserve or contingency funds, he explained the services rendered to industry by the company by providing finance on reasonable terms.

He observed:

> "It often happens that a progressive company requires finance for expansion of a more permanent type than can be provided by the banks, and we feel that in utilising a certain amount of our funds in this way, we are not only contributing to the prosperity of the country as a whole, but are equally serving our own interests.
>
> We are always mindful of the fact that we are in the position of trustees, and the balance sheet in your hands is the best proof that it is possible to be faithful to this trust and yet not to disregard channels of investment outside the giltedge group."

These words should prove a valuable corrective to all directors of insurance funds, whose number is legion, who confound efficiency with an over-whelming, if not exclusive, patronage of giltedge stocks.

Sir Edgar Horne made some extremely interesting remarks about the potentiality of insurance to save estates from the depletion and attenuation involved in the levy of death duties. Death duties are a tax on capital. But it can be converted into a tax on income through the facilities for organised thrift afforded by insurance. But if this mode of insurance is to develop, it is essential that the policies effected for payment of death duties should not be aggregated with the estate and treated as part of capital for the levy of taxation. Protecting legislation in this behalf was advocated by Sir Edger Horne; and if conceded, it will have an enormous influence on the future of insurance in all countries where death duties prevail.

UNITED STATES OF AMERICA.

THE AMERICAN BANKING CRISIS.

The disintegration of the American banking system is proceeding apace. In the wake of the moratorium declared a fortnight ago in Michigan, there has been a rapid succession of similar announcements in other States to which the crisis has spread. A three days' bank holiday was declared by the Governor of Maryland, the effect of which was to close down 205 banks with $889 millions of deposits. A general banking holiday was also declared in Virginia, Kentucky, Albama and Tennessee; and the week saw a further extension if bank closures in Ohio, Indiana, Cleveland, Washington and Indianapolis. The Stock Exchanges at Baltimore, San Francisco and New Oreleans had actually to close down.

Measures to counteract the crisis are being promptly taken. The Michigan banks have reopened after the holiday, but with withdrawals of deposits restricted to 5 per cent. so as to provide cash urgently required to the public, while providing to the banks which need it, more time to set their affairs in order. The policy of restricting withdrawals, generally to 5 per cent. of deposits, is being adopted in every State where a moratorium had been declared, to enable the banks to reopen. And no less than 20 State legislatures held emergent meetings during the week to consider the protective measures to be adopted.

Meanwhile, the Federal Reserve Bank has stepped in as a bold supporter of the money market. Last week, the Bank bought $150 millions in bills and added considerably to its Government bond holdings. Monetary gold stock is falling; and currency in circulation has risen to the record level of $6,000 millions.

The prevailing chaos has thrown out a vehement prophet in the shape of Father Conghlin, a Catholic priest near Detroit, of Canadian extraction. Every Sunday, he disclaims against banks and bankers as the cause of the entire economic trouble; and his words are absorbed with avidity over the radio by eager listeners in millions of homes. Father Conghlin spends on his propaganda not less than $8,000 per week, every cent of which is paid for in 1-dollar bills by his vast and growing audience. The main point in his campaign is that the Government should re-mint every 20-dollar gold piece and make it a 40-dollar piece, thus doubling the volume of gold dollars. He contends that, by this means, more currency would be forced into circulation, and a reduction of 50 per cent. could straightaway be effected in the crushing burden of debt under which the bulk of the people are suffering.

The Father Conghlin plan has caught the imagination of the lay American public; and every legislator is inundated with appeals to endorse and support it in Congress. In a world of ruthless stickling to the principle of recovering loans at any cost, debtors have an exceptional capacity for the grateful worship of anyone appearing as their champion; and it is natural that millions of farmers and merchants, who are dteply in debt without seeing a way out for redemption, should rally to the banner raised by Father Conghlin with alacrity and enthusiasm. There is, however, a danger of judgment getting blurred and confused in every transfer of devotion from a person to a school of thought reared by him; and the danger is especially great in the complex realms of economics and finance. The evils associated with American banking are of long incubation.

Air Mail Week.

But there seems to be very little public appreciation of the truth that equilibrium cannot be restored overnight, though, of course, the position is so critical that time is the essence of any plan of reconstruction if the prevalent confusion is not to develop into absolute, irremediable chaos.

Contrary to expectations, President Roosevelt refrained from making any statement on the financial situation on the occasion of his installation at the White House, but the market is fully convinced that expedition and efficiency in dealing with the banking crisis is to be expected from the new Administration. In fact, President Roosevelt's prestige with his party and the American people at large is now enormous : and so dexterously has he contrived to enhance his reputation since his election that he has become an equal favourite with the conservatives as well as the progressives, and has successfully won over, to his side, influential sections of opinion who regarded as physically incapacitated, and otherwise lacking the qualities necessary for holding the Presidency. The personal influence of President Roosevelt is a very important factor that will have to be fully utilised for reorganising American banking on sound lines, which has now come to be the first and foremost task of the Government.

Such a reorganisation, it is evident, will by no means be easy, since it will have to address itself to the removal of the traditional structural defects of the entire banking system of the country, and these defects lie rooted down in traits which are almost a part of American psychology. The concurrent powers in the sphere of banking, of 48 conflicting legislative and judicial authorities, not to speak of the Federal Government, have prevented the development of branch banking, and hindered the co-ordination of the system on lines appropriate to the growth of business. It has remained tied down all along to the circumscribing influence of an inveterate sentiment of petty local patriotism ; and the result has been that the bulk of American banks have pursued an investment, as distinguished from a commercial, loan policy ; and lending against real estate has come to be the predominant form of American banking security. During the period of the real estate boom, the banks had a spell of apparent prosperity ; but with the slump which has followed the boom, the whole edifice of the banking system has begun to crumble to pieces, with the collapse in the value of farm mortgages which constituted its main foundation. In a similar position, banks in other countries would have made up at least a part of the losses incurred on account of the collapse of agrarian values through urban investments, by means of the power of equalisation afforded through inter-branch banking. But the parochial limitations of the banking system in the United States have put this form of compensating stability beyond reach in moments of crisis.

Of the measures hitherto adopted to undo the evil effects of the crisis which the depression has wrought in the banking system, two call for special mention, as they are remarkably characteristic of the general policy of futility so far pursued, measured by the standard of ultimate value and effectiveness. The first is the creation in February, 1932, of the Reconstruction Finance Corporation. This Corporation has advanced $850 millions to banks and trust companies between February and November, of which $595 millions was outstanding at the end of the year. Altogether, it has spent a few hundred millions short of $2,000 millions since its inception for relief of concerns threatened with bankruptcy. But on this very account, the helping hand of the Corporation has proved to be a fatal touch to its intended beneficiaries. Credit, as much as solvency, is the essence of the banking business, and once public confidence in a bank is shaken, even the soundest financial position is of no avail. The publication of the figures of relief granted by the R.F.C. to needy banks whose real condition had never before been suspected by the public, has served to undermine the public confidence in their soundness to an extent so disastrous that they have been, as a rule, unable to take any permanent advantage of the aid offered by the R.F.C. on their behalf. The Corporation has been only spasmodic in its operations ; it has helped to postpone the collapse of banking institutions, but instead of serving to strengthen the banking system as a whole, it has indirectly produced a state of panic in the minds of depositors which is now the worst impediment to recovery. Of this, the recent spread of confusion from State to State necessitating a series of bank holidays is in itself the most conclusive indication.

The second of the measures put into effect to retrieve the banking situation has arisen as a sequel out of the closing of banks under the moratoria proclaimed by the Governors of States ; it consists of the restrictive legislation which is being enacted in various States severely curtailing the rights of depositors, and preventing them from withdrawing, except to a very small degree, the sums owing to themselves and held as trust with the banks. It may be observed that the retention of deposits in this way virtually under State duress, may save the banks for a brief interval from temporary embarassments, but it is bound to deal one more blow at public faith in the financial dependability of the banks which, in the ultimate valuation, is the only sure basis of banking prosperity because it is the only effective bar to the public temptation to resort to hoarding.

The restoration of confidence is the prime necessity of the banking situation. Piecemeal expedients cannot restore confidence. What is wanted is comprehensive legislation to remove the causes which have led to structural banking developments inimical to progress. The parochial spirit must be rooted out, and room must be found for the coalescence of small institutions with branch-banking activity encouraged. These changes may go against the grain of the temper of Congress with its deep-rooted bias against any interference with State rights ; but it is precisely in the direction of inducing conviction in the mind of an unwilling or prejudiced Congress that President Roosevelt's great influence will require to be exercised within the next few weeks.

There are indications that the foreign policy of the United States will undergo no change as a result of the change in Administration. "There should be no laxity" said Mr. Hull soon after his selection to succeed Mr. Stimson as Secretary of State, "on the part of this or any other nation in the observance of both the letter and the spirit of the treaties and of international good faith. There should be sane, realistic and international co-operation, keeping in mind our traditions and constitution, to aid in preserving the peace of the world." These words, despite their vagueness, can be interpreted in only one way, especially after the announcement of the State Department at Washington that the United States would co-operate willingly in the new Committee of Twenty-one appointed by the League of Nations. A point of great immediate interest is the attitude the Government would be adopting in regard to the proposed embargo on the export of arms for the use of Far Eastern belligerents. Senator Borah favours the imposition of an embargo on Japan alone, but whatever be the decision of the executive, fresh legislation would be required to put it into effect. The question must hence await for final settlement the formation of the new Congress.

Air Mail Week.

GERMANY.

PAVING THE WAY TO DICTATORSHIP.

The avidity, with which the National Socialists have pounced upon the burning of the Reichstag to put their opponents out of the way till the date of the election, makes one almost wonder whether the incendiarism was a stroke of fiery strategy on Herr Hitler's part to make his march towards dictatorship doubly secure. Anyhow, there is all the element of mystery in the result of the investigation which followed the fire. A half-crazy Dutchman was discovered who not only confessed to the guilt, but volunteered the information that he was closely connected with the Communist and Social Democratic parties.

If there ae any two parties in Germany, who, more than others, would have given anything to prevent the Reichstag from ruin, it is undoubtedly the Communist and the Social Democratic parties. But the Nazis required an excuse to hit hard and get control over the electoral machinery, and the culprit's alleged confession, credible or incredible, sufficed for the purpose. A Presidential decree promptly ensued, placing the whole country under an absolute dictatorship. One of the clauses in the decree suspended all the articles in the Weimar Constitution protecting liberty of person; freedom of the Press, and of public assembly; inviolability of postal and telegraphic communication; privacy of domicile; and the integrity of private property. Another empowered the Reich Government to step in and assume full control in the event of any of the States failing to respect its commands in regard to the preservation of public order in pursuance of the decree.

The Nazis have not been slow to take advantage of the opportunities which the Presidential decree placed in their hands. Within twenty-four hours of its issue, hundreds of arrests were made, mostly of persons likely to prove dangerous in the election; and at least full one hundred of those thus arrested were Communist deputies in the Reichstag. The entire Communist and Socialist Press of Prussia was put out of action on the eve of the election. Above all, 60,000 Nazi henchmen were armed and enrolled as auxilliaries to the regular police to be within reach when wanted. The regular police force itself was cleansed of all Communist adherents and replaced by trusted and loyal followers of the Nazi leader. Once a stronghold of the Social Democrats, the Police has been speedily reshaped into a powerful weapon for the use of Herr Hitler and his party.

In the face of these developments, although evidently they form part of the election campaign, the election itself stands robbed of much of its importance and reality. If the Nazis secure, as is quite probable, an effective majority, they will naturally proceed to strengthen their position in the Cabinet, and use the Constitution to wield absolute political power. But even if the improbable should happen, and the result of the election should prove unfavourable, it is extremely unlikely that it would make any difference in the practical exercise of power, since the ground has been fully prepared for the seizure of dictatorial control by the Nazis, even at the cost, if necessary, of over-riding all the restrictions of the Constitution.

Herr Hitler's continuance at the helm of affairs is hence assured, irrespective of the verdict of the election. A vestly more important issue for the good of Germany and of Europe is the uses to which he is likely to put his power. From the trend of Nazi pronouncements in the past, it is almost certain that the very first endeavour of the Hitlerite *regime* would be devoted to the creation of a strong Baltic fleet and a powerful army as a sort of backing for the German colonisation of Eastern Europe.

In the financial sphere, the present Government has made no secret of its aversion for currency experiments of any kind, specially if they are associated with inflation; and in the region of economic reconstruction, the principles actuating the Government have been already defined with the utmost precision by Herr von Rohr, State Secretary in the Reich Ministry of Food. Said Herr von Rohr:

> "We expect the German leather industry to use hides, the linen industry to use German flax, the paper industry to use German pulp, the German soap industry to use German fat. Where a voluntary policy does not suffice, the National Government will employ State compulsion."

The policy here foreshadowed, which has already been given effect to in part by Herr Hugenberg's intensification of agricultural tariffs, is plainly devised to bolster up German agricultural production. But one of the toughest problems facing the Chancellor is whether he shall favour agricultural production which is almost in a state of liquidation in the incompetent hands of the East Elbian landed aristocracy, or free industry from the crushing weight of the toll it is being made to pay to agriculture in the shape of quotas and tariffs. There is also a third alternative of the reorganisation of agricultural holdings into a system of peasant proprietorship so as to strike a balance between town and village in the economic life of the country. Until work on the soil is found for nearly 7 millions of unemployed, the large percentage of the population now living on foreign trade, a policy of rigorous autarchy would only mean starvation for millions and the disruption of German economic life.

The whole keynote to the future lies in the Chancellor's capacity to put the national interest in the forefront of every other consideration. A *regime* based on pilitical power safeguarded merely by a host of armed adherents contains within itself the germs of civil war, and has no possibility of rich economic fruition. Herr Hitler has so far proved ruthlessly aggressive to precious public rights in the single-minded pursuit of power. With the power in his hands, he may yet change his methods, in which case the history of German economic progress within the next decade may reach a sensational level. Otherwise, the Nazi leader will make no mark, and all his energies will be solely absorbed in the protection of his *regime* against potential supplanters.

GENEVA.

JAPAN QUITS THE LEAGUE.

When the report of the Committee of Nineteen on the Sino-Japanese dispute came up before the League Assembly for endorsement, it met with the approval of all members except Japan which dissented, and Siam which abstained from voting. As under Article 15 parties to a dispute could not sit in judgment over their own actions, and abstentions from voting did not count, the decision of the Assembly amounted to the unanimous condemnation of Japan's aggression in Manchuria.

Following the Assembly's decision, M. Matsuoka, the Japanese delegate, walked out of the meeting accompanied by all the members of his delegation. This marked the end even of Japan's formal co-operation with the League for the peaceful composition of Sino-Japanese differences. And it was almost immediately followed by a tremendous drive of Japanese forces into Jehol province.

The League Assembly is to remain to concert measures for the maintenance of international obli-

Air Mail Week.

gations. Within 24 hours of Japan's secession, the Unied States Government announced their full approval of the Assembly report and tendered co-operation with the Advisory Committee of Twenty-one set up by the Assembly, in regard to the deliberation of future action. Russia's reply to the League's invitation for similar co-operation is being awaited.

The Advisory Committee has already started work ; and the very first of the subjects it dealt with was the advisability of an embargo on the export of arms to the Far East. In regard to this question, the British Government's policy pending final international agreement, already announced by Sir John Simon in the House of Commons, has produced an unfortunate impression in League circles. In reply to the demand of the Opposition that Britain should place an immediate and separate embargo against Japan, as the aggressor nation condemned by the League, Sir John declared that it was "impracticable to differentiate between one combatant and another, because one country had greater power than the other, and could stop supplies *en route.*" If the objective of the embargo is to put pressure on recalcitrant Japan, it also carries with it the obligation to offer material assistance to China in her attempt to defend herself; and the line of action chosen by Sir John Simon is regarded by the other members of the League as taking away from the embargo all its purpose and intention.

The French position is more rational—even though its spirit of negation is most unhelpful—than the British attitude. Its keynote, as revealed by M. Paul Boncour, the French Foreign Minister, is that it is "impossible for France to place an embargo on the exportation of arms, as that would be favouring the Japanese, to the detriment of the Chinese."

It is a remarkable fact that the most earnest and straightforward expression of opinion on the embargo question should have come from the United States, a non-member of the League. "I am not in favour of following suit" declared Senator Borah, Chairman of the Senate Foreign Relations Committee, commenting on Sir John Simon's announcement. "To put an arms embargo on China and Japan is to take sides with Japan, under the conditions and circumstances that now exist."

Proposals for legislation empowering the President to declare an arms embargo against any nation in the world are now awaiting tht decision of Congress, and this is so far the most clear-headed of the contributions made by any Government for suitable international action in the wake of the League Assembly Report.

Bolivia-Paraguay Dispute.

The progress made by the League for the ending of armed conflicts in South America is in marked contrast with the paucity of decisiveness in regard to Far Eastern affairs. The disturbance to peace in this region has arisen from two causes; (1) the fighting between Bolivia and Paraguay, and (2) the conflict between Columbia and Peru. In regard to the first, more of the combatants manufacture their own arms or war material; and the effect of an embargo enforced impartially against both, without going into the merits of the dispute, must be to stop fighting automatically, after the existing stocks are finished. And the restoration of peace would provide just the appropriate atmosphere for the League to step in with its arbitrement. At the moment, the Council of the League is considering the question of the embargo in a secret session.

Rival Claimants for Laticia.

In regard to the dispute between Columbia and Peru, the League Council has been making rapid headway in the matter of effecting conciliation between the combatnats, even without resort to any penal measures like the withdrawal of international credit or the imposition of an arms embargo. It may be recalled that Laticia, a riverside settlement in the Amazonian backwaters of Columbia, has been the bone of contention between the two South American Republics, ever since a gang of Peruvians effected a coup in September last and obtained forcible possession of the settlement. The Columbian ownership of Laticia is legally beyond question, having formed the subject of an express treaty establishing it between the Columbia and the Peruvian Governments in 1922. The formula of conciliation now proposed by the Council of the League, makes two stipulations: first, that Laticia should be internationalised and placed in charge of a High Commissioner appointed by the League of Nations; and second, the negotiations for a final settlement between the two countries should be resumed on the basis of the Treaty of 1922.

In response to the formula, Peru has suspended hostilities and Columbia has signified acceptance of the proposed conditions. Settlement can hence be regarded as having been already half accomplished.

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

OVER 86 YEARS' SERVICE IN INDIA

The STANDARD LIFE ASSURANCE COMPANY

ESTABLISHED 1825

Head Office: 3, George Street, Edinburgh.

London: 46, Queen Victoria St., E.C. 4. 15-A, Pall Mall, S.W. 1.

HEAD OFFICE FOR INDIA:

Standard Buildings, 32, Dalhousie Square, Calcutta.

THE VOICE OF BUSINESS.

The old Latin saying invests the voice of the people with the attribute of divinity. But if the Romans had a more active business life and a number of organised chambers of commerce, they would probably have said that the voice of business is the voice of robust common sense. Common sense doubtless, includes a matter-of-fact recognition of self-interest; and if at times the chambers of commerce are found to exert themselves for a restricted sectional interest, their influence on the whole is on the side of national advantage. In spite of all the tall talk of national culture and the ike, it remains an unquestionable historical truth that the flower of national culture blossoms best in a soil of gold and silver. And it is equally true that, while *voæ dei* dilates on national glory, it is the voice of business that lends shape and point to national policy. Once business outgrows the stage of unorganised individual scramble for margins, it gains a new vision and a new outlook, and with it a capacity to relate the advantage of its ranks to the prosperity of the nation. It is not a crude flunkey-like deference to big business that makes the British Chancellor of the Exchequer give the best consideration to the speeches of the Chairmen of the Big Five. And it is not personal ambition but national evolution that in each sphere of business throws up a leader whose annual pronouncement is awaited all over the country with the greatest interest. A Mckenna in banking, a Keynes as chairman of an insurance company, a Sir Josiah Stamp as the spokesman of Railway interests—these are not individuals but institutions.

In India we are yet far from that stage of ripe, acknowledged business wisdom. We are progressing with long strides towards that end. Six or seven years ago, the speech of a President of a commercial organisation lacked all public interest. In the intense political and commercial life of recent years that has changed. British commercial bodies find themselves faced with more than one danger, some of them real, some of them fancied. They regard, not unnaturally, the political progress of this country with feelings of undisguised concern. They feel the call to fill the breach caused by the retreat of officialdom. They find the condition of business in this country changing out of all recognition. There is fierce competition alround from indigenous enterprise, from European and American rivals, from the young go-ahead and impetuous Japanese nation. Just when the need for political support is at its greatest, it is unfortunately most difficult to secure. The tragedy of it all is that in pleading for the preservation of their position, they have to belie some of their most insistent professions of the past.

The speeches of the Presidents of British Chamber of Commerce reflect in full, the difficult position of British business in this country. In his address to His Excellency Sir John Anderson at the annual meeting of the Associated Chambers of Commerce, Sir Edward Benthall urged that British business was sending no hysterical calls to Government for succour. And that was more a charge against Indian businessmen than a proud boast on behalf of his compatriots in this country. And as might be expected, it drew a spirited, but reasoned, rejoinder from Mr. Nalini Sarker, the President of the Bengal National Chamber. In his speech at the annual meeting of the Chamber, Mr. Sarker catalogued numerous instances of official succour to British business in its own country. This is a sample of the speeches of Presidents of European chambers. Theirs is a trying task now. They have to make specific demands of a political character, and at the same time save themselves from a charge of mixing up politics with business. They have to plead for certain executive action in the interests of their business as, for instance, against Japanese dumping, and keep up the show of unaided private initiative. They have to urge the economic development of the country and in the same breath inveigh against discrimination against foreign business interests. It must be said to the credit of men like Sir Edward Benthall that they have done all this in the best way possible; but the scope is severely limited.

Mr. L. A. Carnegie of the Upper India Chambers of Commerce is more fortunately placed than Sir Edward Benthall in the Bengal Chamber. The Upper India has a far larger proportion of Indian members. And even most of the European member firms are so largely interested in indigenous enterprise, that there is little or no incentive for the President to range himself against Indian opinion either in political or economic questions. Mr. Carnegie's is perhaps, the only instance of a businessman's speech, which is free from any evidence of political bias. He has focussed attention on the principal industries and trades in which his fellow members are largely interested. Like every other businessman, he pleads for the resumption of capital expenditure on railways, as well to take advantage of the low money rates, as to help the revival. But unlike others he has afforded a detailed examination of the position of each trade and industry. Sugar, cotton and woollen textiles, tanning, boots and shoes and transport are dealt with at length. In regard to sugar, he draws attention to the overcrowding of factories in one province, and the consequent danger of a shortage of supply of cane, especially in the event of a rise in the prices of alternative crops, and to the difficulties of disposing of the bye-products and the need, in this regard, for research and co-operation with the petroleum interests. As for cotton, the danger of Japanese competition is too well known to call for a recapitulation of Mr. Carnegie's remarks. In the woollen industry, India works only 25 per cent. of her capital equipment. Japan has not only imported large quantities into India of woollen goods but has carried out large purchases of the raw material from Australia which shows that the threats of the future are far more serious than the troubles of the present. Even so with boots and shoes. But the social effects of foreign imports are more deplorable than in other cases. "Imports have been coming in at the rate of about 2,000 pairs per day which are probably displacing about 1,000 pairs of leather shoes per day. Working on the cottage industry system, a shoe-maker can produce a pair of shoes in about 1½ days and therefore something like 1,000 shoemakers, have been permanently thrown out of employment in addition to tanners, curriers and the employees in the other trades involved.

"During the year, hide prices touched a new low level, lower than any figure I can find on record, and until export demand revives and Indian tanners can take their normal requirements, prices are likely to remain low to the detriment of the primary producer —the peasant."

Mr. Carnegie has traversed the whole region of trade industry and transport in this country; and the omission of finance is no matter for regret. He must be congratulated on the most practical speech of the season.

The Presidents of the Indian commercial bodies have of necessity to cover a far wider area. They have in the first place, to withstand the claims of the European commercial community to statutory safeguards. They have to pronounce an opinion on questions like the Reserve Bank or the Statutory Railway Board. The political situation and the impending reforms have their claim on their attention. And as for the experiences of business during the year, it is becoming more and more fashionable for Indian presidents to take an intelligent interest in international problems. Constructive suggestions regarding the economic development of the country require that Indian businessmen should study conditions and trends in foreign countries. Mr. Sheo Kissen Bhattar of the Indian Chamber of Commerce provided an intelligent survey of world conditions as

a background for specific remedies he advocated for the various industries of India. Of such remedies as he recommended, amalgamation and rationalisation are the most important.

Mr. Nalini Ranjan Sarker approached the present problems of Indian economy from the standpoint of the immediately practicable. According to him 1932 has shown certain lines on which India might well progress without waiting for that concerted international action of which there is no sign but a lot of talk. He said that there was first the cheap money policy which bore fruit in the reduction of the borrowing rate of the Government and the saving of substantial interest charges to the taxpayer. Secondly, there was the policy of protecting indigenous industry, as a result of which the cotton mill industry and the sugar industry are expanding in the most encouraging manner. Thirdly, there was a movement towards the initiation of new enquiries of an economic nature and the co-ordination of the results of old enquiries with a view to formulate an Economic Council and an immediately practicable economic plan. All these three lines, he urged, ought to be pursued. The cheap money should grow into a controlled inflation leading to an expansion of purchasing power of the masses. Other promising industries must be brought within the scope of the present protectionist policy. The Economic Council should explore the scope for the establishment of new industries and strengthen the foundation of agricultural prosperity.

The Muslim Chamber of Commerce deserves perhaps, the greatest attention as the youngest body. At first sight, it might look like having brought communalism into a region in which it is even more indefensible than in politics. It is true that if there are no separate Muslim interests in business, the Chamber has no *raison d'etre* and if there are, the Chamber would only aggravate the discord. But the community is the best judge of its needs. For the average man all that matters is that the Muslim Chamber does not transfer to the sphere of economics the separatism and opposition to the national viewpoint which has characterised Muslim politics. That assurance, Mr. Adamjee Hajee Dawood has held out in the most unmistakable manner. Barring the references to the Muslim membership of the Chamber and exhortations to his co-religionists to improve their status in business life, Mr. Dawood's speech contains nothing which Mr. Sheo Kissen Bhattar or Mr. Nalini Ranjan Sarker may not as appropriately utter. It is in regard to the question of commercial safeguards that one might entertain the strongest suspicion of defection on the part of the new Chamber. But speaking on its behalf, Mr. Adamjee said :

"I would like to make it clear to every one that so far as the interests of the country as a whole are concerned, we are second to none in standing shoulder to shoulder with our countrymen in fighting for the rights and privileges of India, for it would but be repeating an axiom that "the part is contained in the whole" and is bound to benefit with the benefit of the whole. We yield to none in our devotion to our mother country. We should not be ashamed of demanding our legitimate share in the opportunities for all that is meant to secure the progress of the country, for, we feel, we also have a contribution to make."

In a later part of his speech he added "I would like to state categorically that Indian commercial opinion will not agree to the circumvention of the trading and commercial rights of the sons of the soil in favour of other than nationals of India. The nature and form of protection given to vested interests should assist in the assimilation of such interests in the larger life of the Indian nation and check the growth of unharmonious blocks that may tend to retard the peaceful development and progress of the community." Even in regard to the question like the Reserve Bank of India in which Muslim demands were one of the causes of the breakdown of the old scheme, Mr. Dawood evinces no narrow communalism. "By all means, he said, let us recall the useful suggestions and criticisms that were made in the course of the discussions of the last Reserve Bank Bill. Let us, however, beware of that spirit of bidding for sectional advantage which postponed by years the start in a matter of fundamental importance to the national economy. . . . It is a truism alike of modern politics and modern economics that an institution like the Reserve Bank of India should be above all danger of interference by party politicians in its internal management. But it would be novel and dangerous to suggest that the best way of providing for such freedom from party politics is to keep the Reserve Bank above the legal and juridical authority of the Indian legislature". The President of the Muslim Chamber, as observed already, is with the other leaders of the Indian commercial community on all broader economic problems of India to-day.

COMPANY REPORTS

BHULANBARAREE COAL COMPANY.

Synopsis of Balance Sheet :

Liabilities.	Rs.	Assets.	Rs.
Capital ...	7,15,000	Block (nett) ...	11,34,842
Reserves ...	6,80,000	Stores ...	31,112
Loans ...	94,962	Stocks ...	67,961
Unpaid dividends	2,063	Outstandings ...	53,674
Debts ...	1,27,848	Advances ...	3,651
		Investments ..	1,95,365
		Cash and other balances ...	14,644
		Loss ...	1,19,124
Total ...	16,19,873	Total ...	16,19,873

Extracts from Directors' Report :

Accounts for the year ended December 31, 1932, show a loss on revenue account of Rs. 79,118. After adding the sum of Rs. 43,273 brought forward from the last half-year, there is a debit balance on profit and loss account of Rs. 1,19,123 to be carried forward. Coal to the extent of 49,750 tons were raised and 33,482 tons were despatched. Further heavy expenditure in fire-stoppings and sand stowing in the depillaring area of 15 seam was incurred during the half-year under review, but it is hoped that this will now be considerably reduced. Fire-stoppings in all mines are in order. Development of 13 and 12 seams made satisfactory progress during the half-year. There was no improvement in the coal market. The health of the labour has been good.

STANDARD COAL COMPANY.

		Loans ...	4,00,000
Total	1,89,78,523	Total	1,89,78,523

Extracts from Directors' Report:

Accounts for the half-year ended December 31, 1932, show that raisings for the period under review were 326,342 tons compared with 350,149 tons for the corresponding period of last year. Despatches were 371,665 tons against 384,772 tons for the corresponding period of last ysar. Deliveries were seriously curtailed resulting in the accumulation of large stocks. Since our last report there has been no change in the coal market. Raisings were further restricted during the half-year. The health of the labour has been good. The profit and loss account, including Rs. 64,538 carried forward from last half-year and after deducting Rs. 2,05,013 for depreciation, shows an available balance of Rs. 2,39,267 which they propose to dispose of as follows:—In paying a dividend at the rate of 7 per cent. per annum, free of income-tax, on 22,998 preference shares of Rs. 100 each issued as at December 31, 1932, Rs. 80,493; in paying a dividend of 4 annas per share, free of income-tax, on 454,624 ordinary shares issued as at December 31, 1932, Rs. 1,13,656; in carrying forward, Rs. 45,118.

ONDAL COAL COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	4,50,000	Block (net) ...	1,81,501
Reserves ...	1,83,000	Stores, ...	1,645
Unpaid dividends	2,412	Outstanding ...	2,97,194
Debts ...	1,90,787	Advances ...	117
Profit ..	18,781	Investments ...	2,51,589
		Cash and other balances ...	1,12,934
Total ...	8,44,980	Total ...	8,44,980

Extracts from Directors' Report:

Accounts for the half-year ended December 31, 1932, after allowing a sum of Rs. 4,000 for depreciation, show a profit of Rs. 18,781 including the sum of Rs. 300 brought forward from last half-year. They propose to dispose of this as follows:—In paying a dividend on the preference shares at the rate of 6½ per cent. per annum, free of income-tax Rs. 6,500; in paying a dividend on the ordinary shares of six annas per share, free of income-tax Rs. 9,375; in carrying forward, Rs. 2,906. Raisings from the subleased properties exceeded the tonnage on which the minimum royalty is payable.

BORREA COAL COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	9,00,000	Block (nett) ...	5,71,081
Reserves ...	20,000	Stores ...	33,364

		Cash and other balances ...	1,72,719
Total ...	11,63,491	Total ...	11,63,491

Extracts from Directors' Report:

Accounts for the half-year ended December 31, 1932, after including the sum of Rs. 6,280 brought forward from last half-year, show a balance on profit and loss account of Rs. 7,552, which they propose to carry forward. Coal amounting to 45,573 tons was raised and 46,171 tons were despatched. There was no improvement in the coal market. The health of the labour has been good.

GOVINDPORE COAL COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	2,00,000	Outstandings ...	65,173
Reserves ...	27,600	Advances ...	28
Debts ...	6,550	Investments .	28,071
		Cash and other balances ...	35,439
		Loss ...	1,05,337
Total ..	2,34,050	Total ...	2,34,050

Extracts from Directors' Report:

Accounts for the half-year ended December 31, 1932, show a loss on revenue account of Rs. 301, to which has to be added the debit balance of Rs. 25,102 brought forward on profit and loss account. After allowing for interest, etc., there is a debit on profit and loss account of Rs. 24,379 to be carried forward. Since the last report the directors have been making every endeavour to arrange with the purchaser for the payment of the balance of the *salaami* but they regret that they have been unsuccessful and it has therefore been decided to take legal action for the enforcement of the company's claim.

CHURULIA COAL COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	1,50,000	Block (nett) ...	1,18,600
Reserves ...	20,000	Stores ...	2,921
Unpaid dividends	824	Stocks ...	472
Debts ...	18,482	Outstandings ...	37,897
Profit ...	11,079	Advances ...	506
		Cash and other balances ...	39,989
Total ...	2,00,385	Total ...	2,00,385

Extracts from Directors' Report:

Accounts for the half-year ended December 31, 1932, show a profit on revenue account of Rs. 14,232 and an available profit on profit and loss account of Rs. 11,079 after allowing Rs. 5,054 for depreciation. They propose to dispose of this as follows:—In paying a dividend at the rate of 12½ per cent. per annum, free of income-tax, Rs. 9,375; in carrying forward, Rs. 1,704. Coal to the extent of 14,881 tons were raised and 14,902 tons were despatched. There was no improvement in the coal market.

REWA COALFIELDS.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	13,50,000	Block (nett) ...	10,44,300
Reserves	35,000	Stores ...	71,370
Unpaid dividends	637	Stocks ...	6,643
Debts ...	1,61,363	Outstandings ...	1,64,796
Profit ...	44,371	Investments ...	2,27,044
		Cash and other balances ...	77,218
Total ...	15,91,371	Total ...	15,91,371

Extracts from Directors' Report:

The working for the half-year shows a gross profit of Rs. 1,08,695, to which has to be added the amount brought

forward from last half-year, Rs. 4,426, making a total of Rs. 1,13,121. After providing for depreciation, Rs. 35,217, writing off preliminary expenses, Rs. 3,500, reserve for taxation and managers' commission, Rs. 15,032, general reserve, Rs. 15,000, there remains a balance of Rs. 44,371, which they recommend should be dealt with as follows:—In payment, on application, of a dividend of annas four per share, or at the rate of 5 per cent. per annum, free of income-tax, Rs. 33,750; leaving to be carried forward Rs. 10,621. During the half-year colliery costs have been further reduced and may now be considered at the minimum possible having due regard to the safety and efficiency of the mines and equipment. Raisings were up to requirements, but are still considerably below the capacity of the collieries. Sales for 1933-34 are still in course of negotiation.

ALLIANCE JUTE MILLS COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.

Extracts from Directors' Report:

Accounts for the half-year ended January 31, 1933, show a profit on revenue account of Rs. 1,22,857, deduct insurance, debenture and other interest, Rs. 84,252, less investment interest Rs. 1,090-2-9, total Rs. 83,162. The nett profit stands at Rs. 39,695. Debit balance brought forward from last account was Rs. 8,05,961, leaving a balance at debit of Rs. 7,66,266 to be carried forward to next account. The stock of jute has been entered at less than cost price and that of manufactured goods at contract rates. Throughout the period covered by this report the mills have continued to work forty hours per week, and in accordance with the terms of settlement between the association mills and those outside the association, the full complement of looms has been at work since September 1, 1932.

LACKATOORAH TEA COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	4,00,000	Block (nett) ..	5,39,532
Working capital ...	1,00,000	Stores ...	5,300
Reserves ...	1,20,000	Bills receivable ...	24,470
Loans ...	27,699	Advances ..	2,430
Debts ...	5,153	Cash and other balances ...	8,548
		Loss ...	77,572
Total ...	6,52,852	Total ...	6,52,852

Extracts from Directors' Report:

Accounts for the year 1932 shows that crop amounted to 5,759 maunds against an estimate of 5,400 maunds and as compared with 6,032 maunds in 1931 and 5,269 maunds in 1930. On the whole the weather was unfavourable, a very severe drought being experienced at the start of the season, followed by excessive and badly distributed rain, which was bad both for crop and manufacturing and also made it very difficult to pluck and transport the leaf. The average nett price realised was 4 annas 1 pie per lb. against 4 annas 9 pies in 1931 and 8 annas 4 pies in 1930. The district average was 4 annas 3 pies. Market was very disappointing throughout the year, but showed signs of improvement towards the close in view of the proposed restriction of exports for the coming season. The total receipts amounted to Rs. 1,22,857 and the expenditure to Rs. 1,45,971, showing a nett loss on the season's working of Rs. 23,614 as compared with a nett loss of Rs. 38,996 in the previous year. After adding the sum of Rs. 44,986 brought forward from last year, the nett loss stands at Rs. 77,572 and is carried forward to the next account.

KUMARDHUBI ENGINEERING WORKS.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.

		Investments ...	3,697
		Cash balance ...	5,435
		Loss ...	3,53,188
Total ...	46,10,980	Total ...	46,10,980

Extracts from Directors' Report:

Accounts for the year ended November 30, 1932. The revenue account shows a profit of Rs. 77,055-1-8 and the profit and loss account, including the debit balance of Rs. 1,37,916 brought forward from the previous year and allowing for interest on bank overdraft and sundry charges and providing Rs. 2,46,500 for bad and doubtful debts, shows a debit balance of Rs. 3,53,188, which is being carried forward. They regret to report a continuance of intense trade depression and severe competition in the few contracts offered in the market during the period under review. The Managing Agents have foregone the interest due to them on the cash overdraft.

KARANPURA DEVELOPMENT COMPANY.

Synopsis of Balance Sheet:

Total ...	25,89,276	Total ...	25,89,276

Extracts from Directors' Report:

Accounts for the half-year ended December 31, 1932. The revenue account shows a profit of Rs. 47,828 and the profit and loss account shows an available balance of Rs. 1,38,425, which they propose to dispose of as follows:— In paying a dividend of 3 annas per share, free of income-tax, on 150,000 ordinary shares, issued as at December 31, 1932, Rs. 28,125, in paying a dividend of 9 annas per share, free of income-tax, on 50,000 founders' shares, issued as at December 31, 1932, Rs. 28,125, in carrying forward, Rs. 82,175.

BRITISH INDIA CORPORATION.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	1,25,15,000	Block (nett)	38,87,160
Reserves and other funds	33,56,701	Stores	9,52,303
Refund of capital accounts	76,939	Stocks	75,28,531
Unpaid dividends	3,540	Outstandings	16,56,638
Debts	29,92,430	Advances	4,12,415
Profit	15,33,198	Loans and deposits	3,17,545
		Investments	45,00,000
		Cash and other balances	12,23,216
Total	2,04,77,808	Total	2,04,77,808

Extracts from Directors' Report:

The profit for the year ended Dec. 31, 1932, after meeting all necessary allowances and including income from investments, amounts to Rs. 11,86,795 to which falls to be added the amount brought forward at the credit of the ordinary and deferred shareholders' accounts, Rs. 3,46,402. The nett sum available for distribution is Rs. 15,33,197 which the directors recommend should be disposed of in the following manner:—Dividend for the period January 1, 1930, to June 30, 1931, on the 8 per cent. preference shares (Rs. 12 per share), Rs. 9,72,000; carry forward to next account Rs. 5,61,197. While results for 1932 show an improvement on those of the last two years, the depression in trade, which was referred to in the directors' report last year, still continues. Prices of raw materials at the end of 1932 showed little change from those obtaining at the beginning of the year. Stocks have been priced at cost or market value as at December 31, 1932, whichever was the lower. Most of the Empire Engineering Company plant and machinery has now been disposed of and part of the property has been sold. The balance of the property will be disposed of as soon as possible. The Naini Tal Motor Transport Company has been closed down. Part of the rolling stock, plant and property of this branch was sold in 1932 and steps are being taken to dispose of the remainder. Revised proposals for the reduction of capital were passed by the shareholders at meetings held in October and November, 1932. This reduction of capital has been given effect to in the balance sheet. The directors desire to invite the attention of shareholders to the circular letter which was issued on February 1,, 1933, covering resolutions for the conversion of deferred into ordinary shares. Should these resolutions be adopted and confirmed by the shareholders and receive Court sanction, the reorganisation of capital recommended last year by the directors will be completed.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

The Calcutta Agent of the Chartered Bank of India, Australia and China has received the following cable from his London Office: "At the annual meeting of Shareholders Directors will recommend a final dividen at the rate of 14 per cent. per annum subject to income tax—£183,883-16--4, carried forward".

THE MERCANTILE BANK OF INDIA, LIMITED.

The Calcutta office of the Mercantile Bank of India, Limited has received the following cable from its London office: Final dividend declared 6% less Income Tax, making 12% for the year. Amount carried forward £170,000. Amount carried to Reserve £25,000. Written off Landed and House Property account £10,000.

THE EASTERN BANK, LIMITED.

The Calcutta Manager of the Eastern Bank, Limited, has received the following cable from his London Office regarding final dividend recommended for the year ended 31st December, 1932: "Net Profit including brought forward £156,236-0-11; Annual Meeting will be held 29th March. Directors recommend final dividend at the rate of 3/- per share less Income Tax at the rate of 5/- per pound less 10.99 pence relief in respect of Dominion Income Tax making net Income Tax per pound 4/1.01. Placed to contingency A/c £55,000/-. Carried forward £41,236-0-11. Dividend payable on and after 1st. April. Transfer Books closed from 27th March to 12th April both days inclusive."

BANK OF MYSORE, LTD.,

A CORRECTION.

We regret the inadvertant errors which occurred in the review of the Balance Sheet of the Bank of Mysore, Ltd., for the Year ended Dec., 1932, in our issue of last week. Instead of "The net profit earned by the Bank during the year 1932 was nearly 23 lakhs, which together with the Rs. 30 thousand brought forward from the previous year, makes a sum of Rs. 53 lakhs available for distribution", must be read "the net profit earned by the Bank during the year 1932 was nearly Rs. 4.25 lakhs, which together with the Rs. 30 thousand brought forward from the previous year, made a sum of Rs. 4.55 lakhs available for distribution"; and instead of "the loans and advances amount to 1.34 crores, and a part of these is considered either doubtful or bad", must be read "the loans and advances amount to Rs. 1.34 crores, and *No* part of these is considered either doubtful or bad."

(Continued from page 461.)

SHELLAC.

(By Our Correspondent).

WORLD OF INDIAN FINANCE

Calcutta, March 24, 1933.

Except towards the finish, credits were in plethoric supply and remained practically unemployable. On Friday, however, a shade steadier feeling was manifest, with borrowers emerging at ½ per cent. For a number of days, this rate of ½ per cent. for interbank call money was more or less a nominal quotation ; but at this week-end, funds can be said to have become employable at this rate. Those who have intimate contact with banking circles are inclined to think that there may be, in the next few days, a greater steadiness in the money market. It is believed that owing to the futility of remitting funds to London where, too, remunerative employment of funds is difficult, and owing to the yield on Treasury Bills declining to so low a level as 1.2 per-cent., banks are turning more and more to government securities. The yield at current quotations of giltedge is 4 per cent. or slightly higher ; and between this yield and that on three months Bills, there is a difference of nearly 3 per cent. This 3 per cent. is considered by bankers as a sufficient insurance against setbacks, if any, in giltedge values. Nor is there any reason to apprehend a landslide in government securities market. Sir George Schuster made it clear, in his budget speech, that the policy of the Government would be so shaped as to result in a continuance of the present phase of easy money and in the appreciation of securities to a substantially higher level. Once there is this assurance that, partly because their own interest requires it, and partly because consciousness of need for scientific policy has dawned on the authorities, the Government may be relied on to do nothing which would have the effect of disrupting the giltedge market, a marked change over in the affections of bankers from Treasury Bills to government securities is bound to come into increasing vogue. There are abundant indications that such a change-over is actually taking place. As a result of the diversion of the surplus balances of banks to government securities, there should, naturally, be a reduction in the spare funds of bankers. If this transfer of activities from Treasury Bills to securities assumes bigger dimensions, the money market is sure to see, in the near future, steadier conditions. There can be really no other explanation for the demand that was, in some degree, felt for funds on Friday. Nor is there any other reason to justify the expectation of less easy monetary conditions.

Nevertheless, it is quite possible that Government will continue to be able to get their Treasury Bills sold at progressively favourable rates. The average rate of accepted tenders in the current week was Rs. 1-3 per cent., as against Rs. 1-4-7 in the last week, and Rs. 1-14-7 a month ago. The market was actually expecting that the average discount might go down to as low as 1 per cent. in this very week. This expectation did not materialise. But there is every justification for the hope that over the next two or three weeks, there would be a further decline in the yield on Treasury Bills. In the balance sheet of the Central Bank for the year ended December 31, 1932, investments in Treasury Bills are shown at Rs. 5,67,75,000 ; in the accounts of the Bank of India, Treasury Bills stand at Rs. 4,54,75,000. That is, between these two banks, Bills to the value of Rs. 10¼ crores are held. Assuming that investments have been made in a manner that maturities week by week will be in equal instalments, the amounts released from the maturities held by these two banks work out to nearly Rs. 1 crore per week. In the present conditions of trade, the banks have no other alternative than to reinvest the proceeds of Treasury Bills Maturities in fresh Treasuries. Of the Rs. 1½ crores of Bills on offer per week, here are two banks who are able to, and must, take at least Rs. 1 crore. It stands to reason that the Imperial Bank, too, must have fairly large holdings in Treasury Bills ; and in its case also, reinvestment in Treasuries is the only alternative. The Bank of Baroda and the Allahabad Bank are the two other indigenous institutions which have large investments in Treasuries. Amongst these, the weekly offer of Rs. 1½ crores should prove short of their requirements. In other words, the supply of Bills is limited to Rs. 1½ crores. But there is an assured and certain demand from institutions who have funds released to them every week and whose only way of re-employing them is to purchase Treasury Bills again.

This prospect of the Treasury Bills rate becoming more favourable to the Government is, surely, a bullish factor of great significance to giltedge. Equally bullish is the future of giltedge when we view it in relation to the compulsory diversion to government securities of the funds of such banks as employed them in Treasury Bills till a month or so ago. This subject is dealt with, at length, in the Editorial Section, with a view to indicate the *what* and the *when* of the next conversion loan. Subsequent to the writing of the editorial on this subject, giltedge securities have registered further advance in prices. 3½ per cent Rupee closed at Rs. 86; and 4 per cent. 1960-70, at Rs. 98. This sensational rise in government securities might well force the hands of the Treasury in the matter of an early announcement of its conversion plan.

Apropos our remarks in our Supplement on the American crisis, an esteemed friend, in an ably written communication, differs from our interpretation that as regards commodities in which India is a competitor with America, India will cease to have her present advantage if the dollar becomes a depreciated currency. The writer states his case thus:

> "I think it is much more likely that the dollar prices of these commodities will rise and that India will suffer no disadvantage. This is partly because I consider that sterling prices will be the deciding factor and party because of the way in which I visualise what is likely to happen in America. It seems to me that one of two things may happen; either that the American authorities will keep control of the situation and go in for a regulated policy of inflation which will create a certain amount of optimism as regards the future of dollar prices of commodities, in which case one might quite well see an important speculative movement, or the alternative is that the American Government's measures will not restore confidence and that there will be continued flight from the dollar. It will not, however, be easy for American holders of dollars to fly into other currencies (even if they should wish to do so when practically all other currencies are unstable) or into gold. The only way open for flight, therefore, will be into commodities. A flight from currency into commodities has, of course, been a normal feature of every process of a depreciating currency with the sole exception of what happened as regards sterling. In that case, in a miraculous way, the British people never lost their faith in sterling, and though there was an initial rise in the level of sterling prices owing to change in international exchange value of sterling, this cannot in any sense be said to have been the result of a process of a flight from currency to commodities. But I do not think that America will go the same way and, therefore, whether the American Government is comparatively successful and is able to embark on a policy of inflation creating optimism, or whether there is continued lack of confidence in the dollar, in either case I think we shall see a substantial rise in the dollar price of commodities. I do not, therefore, think that there is any reason to fear that Indian interests will suffer in the case of those commodities which come into competition with America."

The developments since the publication of our Supplement are worth careful study, from the point of view of the observations made in the above extract. America has not depreciated her currency. It looks as though depreciation would be avoided at all costs. President Roosevelt has expressed his desire that all possible steps should be taken for the earliest assembling of the World Economic Conference. America could not have a strong case as regards international co-operation for the re-establishment of the gold standard if, prior to the Conference, she is herself forced to depreciate her currency. To the extent that the President is keen on doing everything to ensure satisfactory results for the Economic Conference, it may be assumed that there is every possibility of America maintaining the present parity of the dollar to gold. It follows that so far as prices of commodities in India are concerned, developments in America could have no effect one way or the other. Rupee prices of important commodities are more or less unchanged though it must be added that in the case of jute, a sharp rise has taken place. But the main influence in the upward trend in raw jute is the delay in the rains in the jute districts. The appreciation in this fibre, therefore, is altogether unconnected with the American situation.

In America itself, there has been a more buoyant feeling, both in commodities and in stocks. This is mainly due to the fact that the entire country has thorough confidence in the resoluteness and ability of President Roosevelt to deal with the situation in an effective manner.

The exchange market was marked by a rapidly uprising tendency in the earlier part of the week. There was, however, a sharp setback on Thursday when it was known that the Government had accepted sterling tenders at 1s. 6 3/32d. for £25,000 and that the rate for intermediate sterling was also fixed at the same rate. The market was not prepared for this.. On the side of the Government, the case may be stated thus: that they kept on the offer of sterling even during the period when exchange collapsed and even when, for, three weeks in succession, they did not get any application, may be taken as a token of the faith of the authorities that the rupee-rate was bound to recover appreciably. On the other hand, that Government accepted sterling this week at 1s. 6 3/32d. must be taken as indication that the authorities are inclined to think that exchange may not have enough strength to rise to the level prevalent on the eve of the American crisis. It may, now, be stated that whereas the Controller of the Currency has indicated that he would not insist on the old rate of 1s. 6 5/32d., he would not be prepared to go below 1s. 6 3/32d.

The closing rates are: 1s. 6 1/32d. for March-December T.T. with business done 1s. 6 1/16d. for March-April T.T.; and 1s. 6d. January-February T.T.

Bills may be quoted: 1s. 6 5/32d. up to June and 1s. 6 1/8d. July-December. But banks are reluctant buyers except with cover.

Money was slightly more usable. Interbank call money may be quoted ½ per cent. One month, two month and three month deposits are quoted 1 per cent. all through.

1677

BANKS:

It is a mistake to think of a Bank as an institution which exists merely for the purpose of taking care of depositors' money and paying it out on their instructions. Whilst it is true that this is the primary business of a Bank, it forms only a part of the duties which Lloyds Bank is prepared to perform for its customers. It is not possible in a short space to enumerate the many facilities the Bank offers, but its Branch Managers are prepared to consider, or, if they are not themselves in a position to advise, to obtain expert opinion upon any question affecting their customers' finances, investments, income tax, Trusteeships, Executorships, etc.

FINANCE ABROAD.

While the Government of India have been content to remain passive spectators to the colossal gold shipments leaving the country since September, 1931, the British monetary authorities have been availing themselves of all suitable opportunities for the acquisition of gold. The disquietude caused by the constant change of ministry in France and by the wranglings over the balancing of the budget, was responsible for the transfer of considerable balances from Paris to London in the first two months of this year. In the current month, sterling developments in America have, likewise, resulted in further acceleration of the flow of funds towards London. As a result of these and other factors, it has been possible for Britain to add substantially to her gold reserves. Prior to the payment, on December 15, of the British instalment of the war debt to America, gold stocks with the Bank of England stood at £139.4 millions. The Treasury secured £19½ millions from the Bank for meeting the December 15 payment. The gold reserve was, thus, reduced to £120 millions. This was the position in mid-December. Since then, however, rapid increases to the gold stocks of the Bank have taken place. Gold now in the possession of the Bank is round about £170½ millions. This shows an increase of £50½ millions as compared with the position on December 15. Viewing the matter in another way, it will be found that the Bank has not only recovered all the gold that it had parted with for the discharge of December 15 obligation but has improved its gold stocks by £31 millions. Let it not be forgotten that the stocks of the yellow metal with the Bank of England continue to be valued on the basis of 84s. 10½d. Recent acquisitions of gold should have been effected at about the current rate of 120s. 6½d. Though this is the price that has been paid, the value in the books of the Bank could still be only on the Basis of 84s. 10½d. The difference between the book value and the purchase price must, presumably, have been found from the Exchange Equalisation Fund.

If the Bank of England has, thus, been buying gold at a rate which is 30 per cent. higher than the rate at which gold stocks are to be valued in the reserves; and if, on account of this curious position, it had been necessary to have recourse to the device of debitting the balance to the Exchange Equalisation Fund, could not the Indian Government also have given up its tender scruples about buying gold at a rate higher than that at which their gold stocks are valued? That the British financial authorities have been purchasing gold at current rates, may be taken as an indication that, in their view, the parity, at which Great Britain will stabilise her currency when she does so, will be somewhere in the vicinity of the current rate. The present purchase of gold would, therefore, show no loss; on the other hand, as, on transfer to the Bank's books, gold is being valued at 84s. 10½d., a substantially hidden reserve will be disclosed when the new parity is finally decided on. In other words, when gold standard is re-established in Britain at a parity which will correspond to about 3.40, the present stocks of gold with the Bank of England could be re-valued in the books at about £230 millions. While the acquisition of the metal made in the last two months has greatly strengthened the currency position of England, the intrinsic strength is even far greater. It was open to the Government of India to have likewise strengthened their currency position.

What has been the effect of these gold purchases on the British note issue? Up to March 8, for which period Air Mail of London development is available, the Bank of England has increased its holdings of gold by £40,200,000. Of this, there was neutralisation of £19,300,000. The expansion in the note circulation was, therefore, only £21 million. The authorities are anxious to pursue an expansionist policy but not at too heady a pace. The policy of the authorities in this behalf is indicated in the following extract from the *Financial News* of March 10:

> "The offsetting of the gold did not come as a surprise to the market, and is not generally interpreted as an indication that the authorities have in any way altered the policy recently pursued. It was clearly inevitable that, sooner or later, some neutralisation would have to be effected, even though the authorities are aiming at credit expansion; for in the past few weeks the pace has been 'too hot to last'. Indeed, it is very doubtful whether the expansionary policy can be continued even at a lower rate without causing considerable difficulties in the money market—where bill rates have again been forced down to hopelessly unremunerative levels—unless the clearing banks can be induced to reduce their minimum money rate".

ZENITH LIFE ASSURANCE COMPANY, LIMITED.

NOTICE OF MEETING.

Notice is hereby given that an Extraordinary General Meeting of the Zenith Life Assurance Company, Limited, will be held at the Company's Registered Office, Mubarak Manzil, Apollo Street, Fort, Bombay, on Friday 7th April, 1933, at 5 p.m., to receive and adopt the Consulting Actuary's Valuation Report on the Assets and Liabilities of the Company for five years ending 31st December, 1931 and to transact any other business that may be brought before the meeting by the Chairman.

By order of the Board,
BYRAMJEE HORMUSJEE,
General Manager.

Bombay, 16th March, 1933.

Note.—The Transfer Books of the Company will be closed from 31st March, 1933 to 14th April, 1933 both days inclusive.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

MARKET REVIEWS.

CALCUTTA STOCK EXCHANGE.

(By our Correspondent).

Calcutta Thursday Evening.

Jute.—This section was quiet but steady during the period under review. On Monday, Howrahs opened at Rs. 38-15 and Kamarhattys at Rs. 376, and after keeping fairly steady during the course of the day, showed a tendency to sag. Hessians touched Rs. 8-7, while Jute improved to Rs. 28-8 but in spite of these increased rates for the finished goods, Howrahs did not proportionately respond. Every tendency to improvement in prices of Howrahs was quickly arrested by the preponderance of bear sales. Among other bigger denominations, Anglo-Indias came to business at Rs. 269, Dalhousies at Rs. 342, Gondolpara at Rs. 685, Barnagores at Rs. 109, Lawrences at Rs. 412-8, Standards at Rs. 264, Deltas at Rs. 365, Kanknarrahs at Rs. 355, and New Centrals at Rs. 315. Among smaller stocks, Presidencys changed hands at Rs. 4-8, Nationals at Rs. 18-12, Clives at Rs. 22-12 and Reliances at Rs. 63.

North-brooks and Empires did not appear on the list and were neglected. As the session progressed, Hessians and Jute gave way, which produced an easier feeling in the Stock Exchange. Howrahs came down to Rs. 38-6 and Kamarhattys to Rs. 373, and with the Government security market in an excited state, the attention of all speculators is entirely directed to dealings in paper, and Howrahs and Kamarhattys, which always commanded the attention of the entire speculative element in the market, appeared to be neglected.

The general tendency of the market was towards lower levels.

Cottons.—Only a limited business was put through at about last levels. Bengal Nagpores (Ordy.) were dealt in at Rs. 20-12, Dunbar (Ordy.) at Rs. 102 and Kesoram (Ordy.) at Rs. 3-15.

Coals.—Owing to lack of buying power, this section remained quiet, the turn being easier, and only a minimum number of transactions resulted. Amalgamated were marked at Rs. 12-8, Bengal at Rs. 210, Bokaro & Ramghur at Rs. 7-2, Equitable at Rs. 15-8 and Raneegunge at Rs. 30.

Among the lower priced stocks, Talchers were in fair demand at full rates.

Miscellaneous.—There has been no outstanding feature reported in this section. Electrical issues, however, kept fairly steady. Agra Electrics changed hands at Rs. 80, Cuttack Electrics were quoted at Rs. 6-4, Dacca Electrics at Rs. 13 and Upper Ganges Valley Electrics at Rs. 8-4.

Among Engineering, Arthur Butler again advanced to Rs. 5-4 and Indian Iron & Steel to Rs. 5-8. Indian Standard Wagon (Ordy.) were on the other hand a shade easier at Rs. 47.

Sugar shares remain steady on the whole, although a slight profit taking was in evidence towards the close. Carew & Co. are now standing at Rs. 17-8, Cawnpore (Ordy.) at Rs. 37-8, New Savan at Rs. 18 and Samastipore Central at Rs. 17-12.

Among others, Burma Corporations were quoted at Rs. 7-8, Howrah Oil at Rs. 9, Frank Ross at Rs. 3-2, Indian Wood Products at Rs. 28, Calcutta Ice at Rs. 7-4, and Port Shipping at Rs. 10-8.

Banks & Railways.—Imperial Bank's shares continued steady owing to further improvement in the prices of Government securities, of which they are large holders.

The fully paid-up issues are now quoted at Rs. 1,220 and Contributories at Rs. 295. Allahabad Bank's (Ordy.) shares advanced sharply to Rs. 325 from a quotation of Rs. 245.

Only a small business is reported in Railway Shares. Dehri Rohtas changed hands at Rs. 7-8 and Hardwar-Dehra at Rs. 101.

Government Securities.—Opened firm and ruled strong throughout the session and rates registered further advances. 3½% Govt. Paper are now quoted at Rs. 85-12, 4% Loan (1960-70) at Rs. 97-4 and 5% Loan (1955-60) at Rs. 112-8, 4½% Loan (1955-60) are now standing at Rs. 104-4, 5% Loan (1940-43) at Rs. 106 and 4% New Loan (1948) at Rs. 101-4. The Bank rate remained unchanged at 3½ per cent.

Teas.—Ruled quiet with only a limited business passing.

JUTE.

(By our Correspondent.)

Thursday Evening.

Steady conditions have prevailed in the Jute market during the week under review. A fair amount of covering business was done by the shippers at Rs. 25-8 and Rs. 26 for ready and March shipments. Later, with speculative buying, sellers withdrew, buyers not following the rise.

The futures market has ruled very steady, May futures having once touched Rs. 28-12. The strength was principally due to dry weather prevailing in the Jute growing districts. But for want of trade enquiry at advanced rates, the market had to fall down again, touching Rs. 26-12 on Wednesday. Since then, there has been a slight recovery and the quotations at the time of writing are Rs. 27-8.

The statistical position, as analysed in the last week's report, remains unaltered. With the rise in spot price, it is expected that arrivals during the next few weeks may show some improvement.

The quotations are:

Ready First London ...	...	£ 14 15 0
,, Lightnings London	...	£ 14 0 0
,, Firsts Calcutta	...	Rs. 26 0 0
Futures March ...	...	Rs. 27 0 0
,, May ...	...	Rs. 27 8 0

Foreign.—During the mail week, the market in Dundee has shown little change, but the tendency was distinctly easy. Even at these low levels spinners have no incentive to make large-scale purchases and the state of the cloth and yarn markets was not in the least encouraging.

The London Raw Jute market was equally featureless; business with Continental spinners was very poor. The stocks in Hamburg show an increase over the previous fortnight by 4,000 bales. Taking the position as a whole, there is very little indication of an improvement in the tone of the market in the near future.

JUTE MANUFACTURES.

(By Our Correspondent).

Calcutta, Thursday Evening.

Steady but quiet conditions have prevailed in the market during the week under review. The steadiness was the outcome of the strength prevailing in the Jute market. Cotton and other commodities being easier, the Jute goods market by itself was very quiet. Shipment up to the time of writing is very disappointing, and it is feared that stocks at the end of March will show a further increase, as compared with February end figures.

Demand from consuming centres was distinctly poor when compared with the previous week. The Bazar is finding the present level not very tempting for long holdings. The next few months are ordinarily dull months from the point of view of export trade. Mills are however not keen to press sales, but they naturally have to take advantage of every rise, which, in turn, acts as a damper on the market. In short, the position does not warrant wider fluctuations, and in all probability, they will continue to remain for some time within narrow limits.

The quotations are:—

	Rs.	A.	P.
Hessians 40″×8 oz.	8	4	0
,, 40″×10½ oz	10	8	0
,, 50″×10 oz.	10	0	0
,, 45″×11 oz.	10	2	0
Australian Cornsacks	22	8	0
A. Twills	26	8	0
B. Twills	22	0	0
Liverpools	25	4	0
Grainsacks	52	0	0
Sugar Bags	25	0	0
Heavy Cees	21	4	0
Light Cees	21	0	0
E. Bags	17	8	0
D. W. Flour Bags	26	0	0
Salt Bags	19	2	0
Wheat	11	8	0
Woolpacks	1	1	0

DUNDEE.—Very quiet conditions have prevailed in the market during the mail week. The purchases have been confined to small lots and bare immediate requirements. The standard widths are poorly paid, the odd weights and widths commanding comparatively better values. Linoleum Hessians are very dull, and quotations are more or less nominal.

In the yarns section the business done is equally discouraging. Good spinners stick to their own values, while buyers are not willing to pay the same.

WHEAT AND SEEDS.

(By our own Correspondent.)

Thursday Evening.

The Calcutta wheat market during the period under review has ruled easier, and values on balance are lower than the previous week's. A marked decline has taken place in the case of ready wheat. May and September Beta has not had a corresponding fall, because of the fact that ready was at a larger premium over Beta, and of the poor demand for ready flour.

Millers have booked their requirements right up to May next and are therefore not in a hurry to buy at a premium. No new business from Australia is reported to be done, and if the price is maintained at the present level, the prospects for fresh Australian business are poor.

The extension of wheat import duty for another year had practically no effect on the market as its possibility was long before discounted.

The quotations at the time of writing are:

Punjab ready ...	...	Rs.	3 10 0
Beta May ...	...	,,	3 5 9

Due to higher parity of wheat in India the exports during the current year have further considerably declined. The figures for 1st April to middle of March are:—

	1932-33.	1931-32.
	(In tons.)	
From Calcutta	173	162
,, Bombay	1,230	3.455
,, Karachi	827	18.466

Forecast.—According to the second all-India wheat forecast just published, the total area sown under wheat is estimated at 32.38 million acres in 1932-33 against 33.74 million acres in 1931-32, or showing a decrease of 4 per cent. The crop was adversely affected by insufficient rain, cold and frost, but the condition and prospects are, however, fairly good on the whole.

The detailed figures for the provinces and states are:

Provinces and States.	Area. 1932-33. Acres.	1931-32. Acres.	Increase+ or Decrease− Acres.
Punjab (*a*)	9,477,000	10,918,000	−1,441,000
United Provinces (*a*)	7,941,000	7,949,000	−8,000
Central Provinces and Berar (*a*)	3,589,000	3,488,000	+101,000
Bombay (*a*)	2,803,000	2,678,000	+125,000
Bihar and Orissa ...	1,234,000	1,220,000	+14,000
North-West Frontier Province	915,000	924,000	−9,000
Bengal	143,000	145,000	−2,000
Delhi	49,000	47,000	+2,000
Ajmer-Merwara ...	20,000	24,000	−4,000
Central India ...	2,141,000	(*b*)2,196,000	−55,000
Gwalior	1,492,000	1,240,000	+252,000
Rajputana	1,177,000	(*b*)1,517,000	−340,000
Hyderabad	1,384,000	1,383,000	+1,000
Baroda	68,000	65,000	+3,000
Mysore	3,000	3,000	...
Total ...	32,386,000	(*b*)33,747,000	−1,361,000

PUNJAB represents 33.4 per cent. of the total wheat growing area of India. The sowings there are 15 per cent. less than the previous year. The decrease is due to generally unfavourable climatic conditions and to the insufficient water-supply in some of the canals at the time of sowing. There was some damage done to the crop by severe cold in some districts. The general condition is however good, and the crop is reported to be 86 per cent. of the normal.

UNITED PROVINCES represents 22.6 per cent. of the total area of India. The sowings here are almost equal to the previous season. Although there were timely rains during the greater part of the season, the crop is reported to have been severely damaged in certain districts by frost and hailstorm. Consequently, the outturn is estimated to be 80 per cent. of the normal.

CENTRAL PROVINCES & BERAR represent 10.6 per cent. of the total area under wheat in India. Sowings here are about 3 per cent. greater than the previous season. There was lack of timely rains and the crop was also damaged by frost and cold in Northern districts. The yield is therefore expected to be 742,000 tons against 809,000 tons in 1931-32.

BOMBAY represents 7.6 per cent. of the total area. Sowings here show an increase of 5 per cent. Although some damage is reported to have been done by deficiency of rain, and by rat trouble, the crop, on the whole, is reported to be good.

FOREIGN CROPS:

The area sown with winter wheat in U. S. A. is reported to be 39.90 million acres, or 16.7 per cent. less than the corresponding crop of 1932. The 1933 winter sowings in France are estimated at 12.86 million acres or the same as last year. The Australian crop of 1932-33 is estimated at 5.4 million tons, or an increase of 5 per cent. over the previous crop. The Argentine wheat crop of 1932-33 is estimated at 6.20 million tons against 5.88 million tons in 1931-32.

(*a*) Including Indian States.
(*b*) Revised.

LINSEED.

The area under linseed in India during 1932-33 is estimated at 2,649,000 acres against 2,580,000 acres in 1931-32.

The detailed figures for provinces and states are:

Provinces and States.	Area. 1932-33. Acres.	1931-32. Acres.	Increase+ or Decrease− Acres.
Central Provinces and Berar (*a*).	1,046,000	915,000	+131,000
United Provinces (unmixed crop).	320,000	315,000	+5,000
Bihar and Orissa	640,000	662,000	−22,000
Bengal	125,000	126,000	−1,000
Bombay (*a*)	124,000	130,000	−6,000
Punjab	32,000	31,000	+1,000
Hyderabad	269,000	306,000	−37,000
Kotah (Rajputana) ...	93,000	95,000	−2,000
TOTAL ...	2,649,000	2,580,000	+69,000

Central Provinces and Berar represent 27.4 per cent., United Provinces 26.3 per cent., Behar and Orissa 18.5 per cent., Bengal 3.6 per cent. and Hyderabad 9.9 per cent. of the total area under Linseed in India.

(*a*) Including Indian States.

COTTON.

(By our Correspondent).

Bombay. Thursday Morning.

During the middle of the week, the market was closed for two days due to the Parsee holidays. On re-opening, the market ruled very quiet in sympathy with the easier tone of the American market, where bull liquidation and southern selling had a bearish effect.

On short covering and buying, there was a small rise towards the close; but the same could not be maintained, and prices again sagged on long liquidation. The lowest quotation for Broach-April-May touched was Rs. 175-8.

According to the East India Cotton Association's report, the position of Indian cotton in Bombay for the week ending March 17 was:—

Receipts for week ending 16th March.

	1933. Bales.	1932. Bales.
Bengals	4,565	9,448
Oomras	41,582	25,979

TEA.

(By Our Correspondent).

Calcutta, Thursday Evening.

There was no sale of tea in Calcutta during the week.

At the London auctions held on 20th March 26,200 packages of Indian Tea were submitted for sale. There was a good demand with little change in values.

Common qualities were occasionally higher, medium sorts were irregular and in favour of buyers. Good liquoring teas sold well and were fully firm. The following were the lowest prices fetched during the day's auction:—Common Pekoe last auction 7¼d., to-day's auction 7¼d. per lb.; Common Broken Pekoe last auction 7½d., to-day's auction 7½d. per lb.; Common Orange Pekoe last auction 7½d., to-day's auction 7¼d. per lb.; Common Broken Orange Pekoe last auction 7⅞d., to-day's auction 7⅞d. per lb. The following are the value prices:—Clean Common Pekoe last auction 7⅝d., to-day's auction 7⅝d. per lb.; Clean Common Broken Pekoe last auction 7⅞., to-day's auction 7⅞d. per lb.; Clean Common Orange Pekoe last auction 7⅞d., to-day's auction 7⅞d. per lb. Clean Common Broken Orange Pekoe last auction 8⅛d., to-day auction 8⅛d. per lb.

Tea Cess Committee.—The half yearly meeting of the comittee was held at Royal Exchange Place on March 17. A sum of Rs. 5⅓ lakhs was allotted to be spent in India during the coming year on publicity work. The Committee is conducting an extensive campaign in U. S. A., where they propose spending Rs. 4,90, 000.

According to the proposed restriction scheme, the income of the Committee is likely to be reduced, by reason of decreased exports. The committee, therefore, intend approaching the Government of India with a request that the cess be increased from 6 annas to 8 annas per 100 lbs. of tea exported from India.

SUGAR.

(By our Correspondent).

Thursday Evening.

There is no fresh development to report in the sugar market. During the week it ruled quiet but steady, without much business passing.

The quotations are:—

Java White Ready	... Rs.	10	6	0	per md.
,, ,, Afloat	... ,,	10	6	0	,, ,,
Cawnpore Ready	... ,,	9	14	0	,, ,,

Stocks in the Indian ports are estimated as below:—

(In bags, 10 bags=1 ton)

	1933	1932
Calcutta	26,100	77,500
Bombay	56,000	2,10,000
Karachi	45,000	2,10,000
Madras	16,000	68,000
Rangoon	14,860	25,240

Stocks in Java at the beginning of the month are estimated at 2.8 million tons, as against 2 million tons at the same time last year.

There has not been much change in the foreign market. The New York market was a little bit steady after the holidays. Java prices have been nominally maintained, without any important business to report.

BULLION.

(By Our Correspondent).

Thursday Evening.

Gold.—After ruling easy, the gold market has again steadied, due to further depreciation of sterling to $3.42. London prices have gone up from £5-19-7 to £6-0-9 and the local price has similarly risen from Rs. 29-8 to Rs. 29-13 per tola. The export of gold continues in full vigour, the amount exported during the previous week is estimated at Rs. 80 lakhs per s.s. *California, President Adams* and *Rajputana* Stocks in Bombay are estimated at 1½ lakhs of tolas. The trend of the market is very uncertain.

Silver.—The market during the week has ruled steady, with a small advance in price. Opening at Rs. 55 and touching Rs. 54-8, the market has reacted on better advices from London following the rise of Tael. The local market has consequently gone up to Rs. 56-8. The offerings are small. Stocks are gradually declining, and are estimated at 7,500 bars, the daily offtake being maintained at about 35 bars at Bombay and Calcutta together.

The following table shows the export and import of bullion in India:—

During the week ending 18th March, 1933, and corresponding week of 1932:—

(In thousands of rupees.)

	1933.		1932.	
Imports from Foreign Countries by sea into—	Gold.	Silver.	Gold.	Silver.
Calcutta	21	...	...	...
Bombay	6	2,79	65	
Karachi	2	39	...	10
Madras	...	...	...	...
Rangoon	...	...	...	...
Export by sea to Foreign Countries	98,41	...	2,03,31	33

From 1st April, 1932, to 18th March, 1933, and the corresponding period of 1931-32:—

(In thousands of rupees.)

	1932-33.		1931-32.	
Imports from Foreign Countries by sea into—	Gold.	Silver.	Gold.	Silver.
Calcutta ...	48	27,12	34	1,16.31
Bombay ...	74,14	1,08,67	1,65.01	2,73.09
Karachi ...	2,58	21,42	3,99	9.20
Madras ...	...	1,61	14 86	3,21
Rangoon ...	46	2,90	2,68	3,37
Exports by sea to Foreign Countries	64,10,96(a)	86,60(a)	59,49,39(a)	1,76,29

(a)Revised.

SHELLAC.

(By Our Correspondent).

Calcutta, Thursday Evening.

After ruling slightly steady during the earlier part of the week, the market has been quiet without much business passing.

The quotations are:—

Thursday 23rd Mar. 1933 ... ,,	20 2	,, 20 12

London.

During the mail week the position in the London market was rather more healthy, the outside speculators having already liquidated their holdings. Trade has been dull, and the future trend of the market depends upon the monetary policy of America. Shellac at present prices is undoubtedly very cheap, and the tendency is for slightly higher prices. Stocks in London stand at 33,427 packages.

PIECEGOODS.

(By Our Correspondent).

Calcutta, Thursday Evening.

The market continues to remain dull and featureless, without any fresh business of improtance passing. Demand from upcountry centres is very poor. The weakness in the cotton markets both in America as well as in Bombay have further reacted on the piece-goods market and values, though more or less unchanged, are certainly a shade easier without attracting buyers.

The extension of increased import duty had no effect on the market; on the contrary, it is being feared that the price of Japanese goods may be further reduced in the near future.

HIDES AND SKINS.

(By Our Correspondent).

Calcutta, Thursday Evening.

The market during the week has shown a slight upward tendency and the prices for Agras and Darbhangas have improved by 8 to 12 annas for 20 lbs. The unsold stocks of dry hides have decreased substantially, and hence the improvement in prices. The salted qualities are however lower by 0-4-0 per 20 lbs. The latest quotations are as follows:—

	Rs. AS. P.		Rs. AS. P	
Agras cows	... 5 12 0	to	6 8 0	per 20 lbs.
Darbhangas	... 4 8 0	,,	4 12 0	,,
Patnas	... 3 8 0	,,	3 12 0	,,
Salted	... 2 12 0	,,	3 0 0	,,
Goatskins	... 75 0 0	,,	120 0 0	per 100 pieces.
Rejects	... 50 0 0

WHY YOU SHOULD SHOP AT CURRIMBHOY'S

There are three chief reasons why you should shop at Currimbhoy's. Firstly, you can be certain that the very best quality cloth is being supplied to you because you can rely on the famous Currimbhoy group of mills where the cloth is made. Secondly, you are supporting Indian Industries when you purchase at Currimbhoy's Cloth Depot. Thirdly, Currimbhoy's fabrics are unequalled in India for their durability and lasting colours.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

CONVERSION LOAN—WHEN NEXT?

In our last week's review of the money market, we expressed the belief that, taking all circumstances into consideration, the last vestige of the adverse effects of the American crisis should disappear in a week or two and that the market would be back in the state in which it was on the eve of the crisis. Then we added: "Meantime, the control of the Government over the money market has become even surer. This means that, in a fortnight's time or so, the stage will be again set for the next phase of the conversion plan". Events in the current week would seem to lend further emphasis to the aptness of this comment. In the week ended March 18, exchange was quiet,and so was giltedge,in the earlier part; and there was marked strength in both in the latter part. The rupee-rate closed at 1s. 6d., after having touched 1s. 5 27/32d. immediately after the American crisis. During the current week exchange advanced to 1s. 6 3/32d., with business done at 1s. 6 1/8d., on Wednesday. In fact, the general opinion in banking circles was that there was hardly anything to stand in the way of the rupee-rate rising to a level which would admit of the Government's being able to buy sterling at 1s. 6 5/32d., which it was believed, was the rate below which the authorities would not be prepared to go for purchase of Councils. The market, however, had a somewhat rude shock on the announcement of the results of sterling tender. It was known, on Thursday morning, that the Government accepted sterling applications for £25,000 at 1s. 6 3/32d. What was even more surprising to the market was that the intermediate rate for sterling was also fixed at 1s. 6 3/32d. The usual custom in this regard is that the intermediate rate is generally fixed at 1/32 higher than the highest rate obtained on the tender day. Contrary to this practice, the rate for intermediate sterling was announced at 1s. 6 3/32d., that is, the same rate as that which was forthcoming in receipt of accepted applications on the weekly tender day. The market was not prepared for this action of the Government. It believed that the authorities would not come out on the market until and unless they could secure 1s. 6 5/32d.

* * *

That sterling was accepted at 1s. 6 3/32d., and that the intermediate rate was to be also 1s. 6 3/32d., was taken as an indication of the Government's view that in the light of recent developments, exchange might not have enough strength to reach the old level. The effect of this step was to cause a setback in exchange. The rupee-rate receded to 1s. 6 1/32d., though the undertone at this level was quite firm. We are inclined to think that if the Government had not intervened in the way they did, exchange might have stabilised itself at 1s. 6 1/8d., in the course of this week. As it is, there has been a marked retrogression ; and with Government's buying rate remaining at 1s. 6 3/32d., an upper limit of 1s. 6 1/16d., for exchange is definitely specified for the time being. Whether intrinsic conditions in the exchange market would show such sturdiness and strength as to necessitate large sales of sterling to the Government at 1s. 6 3/32d., and thereafter result in large-scale applications at a higher rate on the next week's tender day, is more than what we can say under the present circumstances. But it is safe to state that, so far as the exchange market is concerned, the earlier nervousness about the drying-up of gold exports has entirely disappeared ; that there are no grounds to justify any bearish view of the rupee-rate ; and that conditions are now nearly the same as they were on the eve of the sensational developments in the United States.

* * *

Turning to the giltedge market, it is equally noteworthy that the first effect of the news from America was to cause a regress in prices. There has, however, been substantial and sustained recovery since then. While, towards the finish, there has been some setback in exchange, the bullish factors in the giltedge situation have gathered increasing momentum, without practically any reactionary tendency. In the last week, 3½ per cent. Rupee Paper, after touching Rs. 82-2, pulled up to Rs. 83-6; and 4 per cent. 1960-70 loan rose from Rs. 94-1, to Rs. 95-1. On Saturday of last week, there was a sudden flare up in the giltedge market. Advance reports were received of the decision of the British Government to issue a 2½ per cent. loan. This caused a sensational rise in giltedge values, which have risen from strength to strength since last Saturday without any interruption and without the usual setback caused by profit-taking. To this rise, various causes have contributed. In the first place, the growing appreciation of the fact that the Indian money market can have no disturbing reactions from the American situation is responsible for a heady revival of confidence in the minds of operators in giltedge. Bulls began to adopt aggressive tactics ; and bears had to rush in to cover their sales and cut their losses. In the second place, just as the announcement of the earlier conversion loans of the British Treasury have had the most favourable effect on Indian giltedge securities, the present issue of a 2½ per cent. loan had, likewise, a heartening effect. In the third place, India sterling securities have, after a fairly long interval of sluggish and listless conditions, been showing daily increasing rates. In the fourth place, the technical position of the market seems to have been that bears had rather heavy sales. When, therefore, a sudden and startling spurt in prices took place, bears had to cover their position frantically ; and these purchases were responsible for a frenzied market. In the result, 3½ per cent. Rupee Paper, at the time of writing, is quoting Rs. 85-8, and 4 per cent. 1960-70 Rs. 97-14.

* * *

In the money market, rates have eased further ; and credits have become practically unusable. Call money is nominally quoted ½ per cent. ; and even if one were to search like Diogenes with a lantern in one's hand in broad daylight, he would find it difficult to discover borrowers. The average discount rates on accepted tenders for Treasury Bills have been declining rapidly. In the current week, the rate was Rs. 1-3 as compared with Rs. 1-4-10 on March 14, Rs. 1-7-10 on March 7, Rs. 1-10 on February 28, and Rs. 1-14-7 on February 21. There is every indication that the average rate might sink to the phenomenally low-level of 1 per cent. in the course of the next two or three weeks. As a matter of fact, the market was expecting that, possibly, in this very week, the rate of 1 per cent. might be touched. On this anticipation, there was a sharp rise in giltedge securities in the mid-week. A state has now been reached when everyone is looking forward to lower discount rates for Treasury Bills ; this very decline is exercising a markedly bullish effect on giltedge ; and easy money has no effect whatsoever on the rupee-rate. To sum

up, the Indian Financial World has left behind the adverse developments caused by the first shock of the news of the crisis in America. Exchange has risen to near the old level. Giltedge has not only captured the lost ground, but shown further remarkable gains. The money market is in a condition conducive to the health of giltedge. We are, therefore, justified in hoping that in the present position of the money, giltedge and exchange markets, we have a most favourable combination of circumstances for the successful launching of the next instalment of the conversion programme.

* * *

Sir George Schuster discussed, in the course of his last budget speech, the Government's future policy as regards conversion schemes and funding operations. Prefacing his remarks with the caution that he could not, of course, announce any precise plans, he said:

> "We have proceeded so far step by step, and at each step we have raised the level of securities and given to the investors concerned an opportunity to convert their holdings in a manner which has left them a good margin of profit. I have every reason to anticipate that this process will continue, for I believe that, subject always to the maintenance of sound Government finance, we have before us a long period of cheap money and the possibility of seeing securities reach a substantially higher level. In this policy we are looking not merely to the immediate, but also to the more distant future. We feel that with the new constitution approaching we have a special duty to prepare the way, so that the first years of the new Government may be freed from embarrassment. In particular, we desire to consolidate the position so as to make it possible to start a Reserve Bank on sound foundations."

His anticipation of the further stages in this conversion process was based on the hope of the continuance of cheap money and of the possibility of seeing securities reach a substantially higher level. Money has become cheaper since the date on which Sir George made his budget speech; and securities, too, are now at a substantially higher level. We may, therefore, proceed to consider what should be the salient features of the immediate phase of the conversion plan. At the time when the Finance Member drew up his estimates, he did not have the final figures of the February conversion loan. In the following summary of the ways and means transactions, Sir George assumed that against Rs. 50 crores of outstanding liabilities in respect of 5 per cent. 1929-47, 6 per cent. 1933-36 and 5 per cent. 1933, only Rs. 22 crores would have been taken up under the February conversion scheme."

LIABILITIES.

(In crores of Rupees.)

	Budget. 1933—34.
Railway Capital outlay	3.30
Other Capital outlay	1.23
Provincial drawings	4.37
Discharge of permanent debts	37.10
Discharge of Treasury Bills—	
(*a*) with the public	8.00
(*b*) in the Paper Currency Reserve ...	...
Repayment of Ways and Means advances ...	...
Loans and advances by Central Government	.72
Other transactions	−2.58
	52.19

RESOURCES.

Revenue surplus	.42
Rupee loans (net)	12.00
Sterling loans (net)	8.00
Post Office cash certificates and savings bank	8.40
Other unfunded debt	4.96
Appropriation for reduction or avoidance of debt	6.88
Depreciation and Reserve Funds ...	−.20
Reduction of cash balances	11.73
	52.19

On the other hand, in his description of the borrowing programme for 1933-34, he made the assumption that Rs. 30 crores of the three loans will be converted into the 4 per cent. 1960-70 loan. In the ways and means summary, we find that as against an estimate of Rs. 22 crores of maturing bonds being converted into 4 per cent. 1960-70 loan, the new rupee loan programme was fixed at Rs. 12 crores. In the estimated borrowing programme, against the assumption of conversion reaching Rs. 30 crores, the New Loan to be raised in India was placed at Rs. 4 crores. Actually, however, the results of the February conversion would be in the neighbourhood of Rs. 34 crores. This exceeds the figures assumed for conversion in the ways and means summary by Rs. 12 crores and the figure assumed in the borrowing programme by Rs. 4 crores. That the February conversion loan was responsible for the holders of 5 per cent. 1929-47, 6 per cent. 1933-36 and 5 per cent. 1933 bonds assenting to exercise the option to the amount of Rs. 34 crores, means that there could be no need to raise any cash loan at all in India.

* * *

On a further scrutiny of the figures in the ways and means summary, we are confirmed, all the more, in the view that there should be no need for any cash loan in the next financial year. So far as savings bank and cash certificates are concerned, Sir George has allowed only for receipts to the amount of Rs. 8.40 crores. In the revised budget for 1932-33, the receipts under this head are estimated at Rs. 14.35 crores. It is true that there is a substantial reduction in the rate of interest allowed on cash certificates; but even so, to the extent that the yield on government securities has also gone down and is tending to go down still further, cash certificates, at the present rate of 4½ per cent., should prove an attractive form of investment. We believe that the estimate of Rs. 8.40 crores as the receipts in this regard for the next fiscal year is unduly conservative. For our part, we shall not be surprised if the Government realise as much as Rs. 12 crores from savings bank and cash certificate receipts. Another point. Provision is made for the reduction of the floating debt by Rs. 8 crores. On March 31, 1933, the outstanding Treasury Bills with the public would be Rs. 28 crores; by March 31, 1934, the floating debt is expected to be reduced to Rs. 20 crores. We do not see any reason why the Treasury should go out of its way or should be in any undue hurry to reduce the size of the floating debt under the present circumstances. The Government are now getting their short-term requirements at about 1.2 per cent. There is every likelihood of even cheaper rates being forthcoming in the near future. At the current date, the total of Treasury Bills is round about Rs. 25 crores. This is an amount which is fully within the capacity of the Indian market to digest.

* * *

Our own view is that practically half the floating debt now outstanding is held by the two leading Indian joint stock banks, namely, the Central Bank of India and the Bank of India, from whose latest balance sheets we find that they have very heavy portfolios of Treasury Bills. The balance of the floating debt must be held by other banks and investment institutions, relying entirely on their local resources. That is to say, the exchange banks have now but a very small holding in Treasury Bills; and there is practically no investment on account of overseas interests in our short-term Bills. This proves, clearly and conclusively, that without recourse to any funds from abroad, the Indian money market could easily stand up to a floating debt of Rs. 25 crores to Rs. 30 crores. On the one hand, the size of the floating debt to-day is not beyond the capacity of the market; on the other hand, the rates at which Government are securing their requirements are so low that they could not have dreamt of them. It is, therefore, sound and prudent finance that

while present conditions last—and there is every reason to suppose that they will last for a pretty long time—the floating debt should be kept at about the present level. The provision to reduce the floating debt by Rs. 8 crores in the next financial year errs, therefore, on the side of undue caution. Assuming that the Government will find it necessary to revise their present intention of effecting any reduction in the floating debt, and that the receipts from savings bank and cash certificates would be in excess of the budget estimate by Rs. 3 crores to Rs. 4 crores, the resultant position would be that far from the Government requiring any new money, they would have, up their sleeve, a substantial cash balance of over Rs. 10 crores. We are, therefore, driven to the conclusion that in respect of that portion of the 5 per cent. 1929-47, 6 per cent. 1933-36 and 5 per cent. 1933 bonds, which has not been converted, the resources needed for repayment on the due dates can be found without recourse to a fresh cash loan. Nor is there, otherwise, any necessity for a cash loan. In other words, the programme that the Government will have to address themselves to will be one of pure conversion in respect of the loans maturing in 1934 and 1935. The loans that may be tackled from this point of view are :

	Rs.
4½ per cent. 1934 loan	25.98
4 per cent. 1934-37	9.53
5 per cent. 1935	13.83
6½ per cent. 1935	16.95
Total ...	66.29

Another loan that may be taken note of in this connection is the 6½ per cent. Bombay Development Loan for Rs. 9.39 crores.

* * *

What type is the conversion loan to be? And what is the yield to be offered? At the time when the conversion loan programme was announced in January last, long-dated securities were not in much popular favour. But the bold and thorough-going way, in which the Imperial Bank and the Government of India carried out their open market purchases with a view to strengthening securities in February, has gone a long way in inspiring the fullest confidence in the longer-dated scrips. The most noteworthy feature of the giltedge situation in the past week is the substantial buying enquiry for long-dated stocks like 3½ per cent. Rupee Paper and 4 per cent. 1960-70 Loan. In the present mentality of the market, there is, therefore, added justification for the conversion loan being in the form of a long-dated issue. If it is to be a long-dated loan, why not 4 per cent. 1960-70 itself? As this scrip is now quoting Rs. 97-14, why should not the issue price for purposes of the conversion plan be fixed at Rs. 99 or even par?

* * *

At the same time, it must not be forgotten that banks, even in this altered psychology of the giltedge market, continue to have a preference for loans of medium maturity. We would, therefore, suggest that there should be two conversion loans, one a long-dated issue, and the other a loan of medium maturity. We should think that a 3½ per cent. issue redeemable in 10-15 years issued at Rs. 99 or par should prove an extremely attractive security for banks. There can be an objection to a 3½ per cent. issue of this description in the sense that as the irredeemable 3½ per cent. Government Paper is a popular scrip in the market, it would be unwise to introduce another scrip that might cause a confusion. Apart from this, we do believe that a 3½ per cent. loan on 10-15 years basis should prove, otherwise, most welcome. We must not omit to emphasise that the yield offered on a loan of medium maturity has, necessarily, to be slightly lower than that required on a long-dated loan. That is, if for argument's sake, we assume that it would be possible to issue a 4 per cent. 1960-70 conversion loan at Rs. 99 or par, giving an

yield of 4 per cent or slightly over, an yield of 3.75 to 3.9 per cent. in the case of a loan of medium maturity should suffice.

We shall deal, in a later issue, with the problem of conversion in regard to such India sterling stocks as mature in the next three years.

FASCIST GERMANY.

Before this article appears in print the Hitler Cabinet will most probably have been invested with dictatorial powers to rule Germany. The Empowering Bill, which the Reichstag must be considering as these lines are being written, proposes to give a *carte blanche* to the Nazi Cabinet for a period of four years; which should suffice either for a substantial achievement which will ensure its popularity or for entrenching itself by extra-constitutional methods in perpetual power. The five articles of the bill are first, Government is empowered to make laws including budget and authorisation laws. Second, such laws may deviate from constitution so long as they do not affect the Reichstag, the Reich Council or the rights of the Reich President. Third, such laws will be drafted by the Chancellor and enforced on the day of promulgation, but Articles of constitution 68 to 77 establishing right of control by Reichstag and Reich Council will not affect these laws. Fourth, treaties with foreign states relating to objects of Reich legislation do not need consent of Reichstag or Reich Council. Fifth, the Bill will be enforced with promulgation and lapses on 1st April, 1937 or if the present Reichstag is replaced.

* * *

Thus the right to interfere even with the provisions of the constitution has been given to Hitler over a large field. And the only limitation on his autocracy is the intervention of President Hindenburg, which has been left unaffected. All reports are agreed that, in spite of the drastic provisions of the Bill, there is no doubt about its successful passage through the Legislature. In the first place, many of the Socialist and Communist members are in jail and their votes will not be available for the opposition. Even for such sections of the Reichstag as the Centre, the Bavarian People's Party and the Social Democrats, the official agency of the Nazi Party has uttered a significant warning that if the opposition parties should refuse to support the Emergency Bill, their action would be interpreted as a declaration of war and that punishment would be visited not only on such members but also their voters in the constituencies. These are times when Nazi threats have more meaning than when Herr Hitler was regarded as a common agitator or an extinguished volcano. There is presumably more strength behind the Government than the Nazis could impart to it by themselves. And it may be expected that before long Herr Hitler would be a nearer approximation to the object of his hero-worship, Signor Mussolini. Already the latter is reported to have congratulated himself on the evolution of Facism into a world cult, an obvious reference to the advance of Hitler.

* * *

The suddenness with which Herr Hitler, who was the object of universal jibe as a pocket-Mussolini, was called to the office of Chancellor and latterly to a virtual dictatorship is the most important feature of 1932-33. Von Papen, who should have been counted among the opponents of Hitlerism, was afterwards chiefly responsible for installing the foreigner in the Chancellorship. The most notable change of all is in the attitude of President Hindenburg. It is not long since the aged President made proposals to Herr Hitler, which were less an invitation to form a Government than a gratuitous insult to his self-respect as a party leader. And yet within a few months, conditions have changed out of all recognition. Either President Hindenberg for certain reasons, finds himself powerless before the Fascist methods of Hitler, or he himself has come to repose a new faith in the capacity of this foreigner to solve the principal problems of Germany. It is difficult to believe that, if the President chose to do so, he could not have frustrated the grant of dictatorial powers to the Hitler Cabinet. At any rate, he could not regard his power of intervention as any adequate protection against the excesses of a well-organised and growingly militant party in power.

* * *

With the President in a somewhat non-interfering, and passively helpful mood, Hitler and his followers have been energetically strengthening their position. The strong arm has been bared to the views of all their opponents. All strategic positions of power have been filled with Nazis. There can be no mistaking the fact that the Nazis are determined to bear down all opposition at home. And the notorious order to shoot is a sample of the measures that Hitler is prepared to put into operation.

* * *

Out of all these developments two questions of world importance emerge clearly into view. With Hitler so militant and Mussolini so pleased, it is necessary to ask whether the events in Germany point to a new stage of political evolution, in which the forms of government, with which the world has been familiar during the last two centuries, will undergo a substantial change? Those who believe that the greatest lesson of history is the dangers of autocracy, have cause to feel a genuine concern, whatever the failings of modern democratic government may be. But of this, we shall have much to say in a later issue of *Indian Finance*.

* * *

For the present, the more immediate concern is the repercussions of the domestic and foreign politics of an exhuberant Hitlerism on world politics, and economy. When the chances of Hitler's Chancellorship first emerged to view, the hope was widely expressed that the responsibility of high office would have a sobering effect on Hitler and that before long he would abandon many of the ideas which caused uneasiness abroad. But the speeches of Herr Hitler himself and many of his principal followers since their advent to power have belied all such hopes. The restoration of Hohenzollerns and the spirit of Potsdam, the re-armament of Germany despite the international understandings which forbid such a measure, the renewal of the claim to German colonies and the re-unification of the German peoples in one political unit—these were, and still continue to be, the chief objectives of Nazi policy.

* * *

The restoration of the Hohenzollern is almost practical politics in Germany to-day. An open reference to it was made in one of the German legislatures in the presence of the Ex-Crown Prince who naturally cheered the speaker when he expressed the Royalist sentiments. The Kaiser, too, it is reported, has applied for permission to return to Germany. As for the other planks, the Nazi deputies in the newly elected Prussian diet freely discussed these questions. It was declared by the leader that Prussians were Pan-Germans and their goal was the union of Germany and German-Austria. The return of the lost colonies is also looming large in German policy; and in this respect, Germany is keenly interested in the actions of Japan regarding the mandatory areas in the Pacific. It was urged that when Japan ceases to be a member of the League of Nations, she can have no claim to the mandatory areas, which she can hold only under the authority of the League. But a recent announcement from Tokyo makes it clear that Japan does not propose to renounce her rights; and Germany is agitated over these. The Nazi ambition ranges over so wide a range that, the moment Herr Hitler assumes a vigorous foreign policy, there must

be a great flutter in international circles. That a Germany, disarmed and economically disrupted, should so suddenly take up a high line in foreign relations is a matter which, if it is not born of sheer desperation, has an element of inexplicable mystery about it.

PLIGHT OF FOOTWEAR INDUSTRY.

A year ago, writing on the question of dumping of shoes in India from Japan and the Bata factories of Czechoslovakia, *Indian Finance* expressed the view that the minimum duty of four annas per pair would have very little effect in checking those imports. Indeed, our suggestion that the minimum duty should be increased to eight annas per pair was considered too low to be of any appreciable value to the Indian footwear industry. It may be remembered that several important manufacturers of Cawnpore, Madras, and Calcutta wrote to *Indian Finance* advocating a very much higher tariff. They seem to be justified by the present condition of the indigenous footwear industry which passed a period of extreme inactivity. It was even worse than the previous year, as the production was considerably decreased, and the unemployment in the trade was consequently severe. The duty on the import of Japanese cloth and rubber shoes was rendered innocuous by the import of ready-made cloth shoe-uppers from Japan and by assembling them here with rubber soles. The imposition of the new duty of two annas per pair on these cloth uppers, announced in the last budget, would undoubtedly have a deterrent effect on the inflow of these imports but the continued dumping of complete shoes from both Japan and Czechoslovakia continues to strangle our leather and shoe industry. This unfortunate state could surely have been avoided, had the authorities accepted our suggestion and raised the duty to eight annas per pair. Its value was two-fold. Not only would it have given some relief to the industry, but it would have considerably added to the national exchequer. The industry as a whole has been losing, making no profit during the last year, while losses in most cases have been severe. In Agra, which is called the Northampton of India, several factories have had to close down. A majority of the running concerns have been forced to restrict production. It is time that some serious effort was made by the authorities to save it from ruin. The Agra Shoe Manufacturers' Association, which, we understand, is a powerful body, is proposing to move the Government in the matter.

* * *

With the exception of a few big concerns like Messrs. Cooper Allen and Chambers, the leather and shoe industry is still more or less in a 'cottage' state. Even in Agra, which was supplying footwear to all parts of India from Peshawar to Cape Comorin, the industry was just devcloping into bigger units of production, when it was caught in the blizzard of world depression. Further onslaught of the import of cheap Japanese cloth shoes and Bata manufactures has had the effect of crippling the entire industry very seriously. Even the bigger concerns could not withstand the severe competition from these foreign imports. It would be better if the various interests at Agra, Cawnpore, Calcutta and Madras make a combined representation to the Government to produce the desired effect. Collection of reliable statistical figures will go a long way to convince the Government of the plight of the industry and the urgency of relief. By the way, we may mention that we understand that the Bata factories will start operations at Konnagar (Calcutta) by the end of the next month. This will be a serious question for our indigenous manufacturers.

BEHAR AND ORISSA BUDGET.

With the revenue better than it was expected to be, it was a comparatively pleasant task for the Finance Member of Behar and Orissa, on the eve of the separation of the province into two, to present his proposals for 1933-34. The opening balance on April 1, 1923, was Rs. 42½ lakhs which was Rs. 14½ lakhs better than the figure originally anticipated. During the current year the total receipts were expected to be Rs. 539 lakhs, while the total expenditure was estimated at Rs. 529 lakhs. There had been a total improvement of Rs. 10 lakhs in the position of the Province as the result of the year's working, and it was expected that the current year would close with a balance of Rs. 52½ lakhs, of which Rs. 31 lakhs would represent the Famine relief fund and Rs. 14½ lakhs the ordinary balance. This agreeable result had been achieved by the essentially practical retrenchment schemes effected with the strictest attention. Turing to the proposals for 1933-34, the Finance Member counted on the signs of improvement in the income under this head in the early part of the year, and in the measures taken to counteract illicit distillation, for an increase in the revenue under this head. The total revenue was expected to be Rs. 508¾ lakhs. On the expenditure side, though be Rs. 508¾ lakhs. On the expenditure side, though it had been necessary to provide Rs. 6¼ lakhs for the cost of preparing the new electoral rolls, expenditure charged to revenue would be Rs. 522 lakhs. The retention of a five per cent. cut would yield a further saving of Rs. 9 lakhs, and allowing for the effect of this factor the total expenditure would be Rs. 549¼ lakhs and the closing balance would be Rs. 46 lakhs. In addition, important savings were likely to occur owing to reorganisation in the engineering departments. Provisions for grants of Rs. 1 lakh and Rs. 1½ lakhs have also been made to enable progress to be made with the Puri and Bhagalpur waterworks schemes respectively, as in their case, it was no longer possible to hold up expenditure.

A Clive Street businessman, for whose aggressive personality, and shrewd piercing insight, I have ever the warmest admiration, upbraided me, over a *chota* peg, for being unduly pro-Government in our recent articles in *Indian Finance*. "I am sick of this constant harping on the amazing improvement in Government finance"—he declared. What is the result?—he asked ; and in furnishing the reply himself, he chaffed me, in effect, thus: "Week after week, *Indian Finance* has been advertising, from the house tops, what it calls a welcome change in the financial and exchange position of the Government. It feels as happy at the Treasury getting its short-term money at 1¼ per cent. as it would if it had itself received a largess of a few crores, free and gratis. The sharp rise in giltedge securities is acclaimed by it as a triumph no less for the aptness of its suggestions than for the Government who have thereby been able to borrow at increasingly lower rates. The large sterling balance in the India Office has given peace of mind to the writers of *Indian Finance ;* so much so, one might think that they were worried even more than the Secretary of State in the dark days when the financing of the India Office was a conundrum of the first magnitude. *Indian Finance* has breathed freely since Reverse Councils stopped. It gloated over the linking of the Rupee to Sterling. Week after week, we were given glowing accounts of these marvels that have taken place in Government finances.

* * *

"But what about the other side of the picture? Why is money so cheap? Why is giltedge soaring all the time? Why are banks tumbling, one over another, to thrust money on the Finance Member at rates unheard of and undreamt of before? Is all this due to any new adroitness or skill in the handling of Government finance by the authorities or is it merely due to sluggish trade, poor demand for money and lack of suitable investment? Is the linking of Rupee to Sterling a beneficent measure? Why is not Australia or New Zealand linking their currencies to sterling at the old parity? Why have they depreciated their currencies though they are still in the sterling group? Are they not having, by this depreciation, an advantage of 12½ per cent. or over as against India, another member in the sterling group? And when one considers that countries like Australia have depreciated their currency by 12½ per cent. as compared with the old parities, India has actually appreciated her currency by 12½ per cent. in comparison with the old parity of sixteenpence. Does this not mean that India has a handicap of 25 per cent. as against such other countries in the sterling group as have their currencies linked to sterling but on a new basis? Why should India alone be asked to have no choice in the matter? Why should she be forced to have this handicap, with no weight attached to her own say in the matter? Has there been any real alleviation in the distress of the country? Has there been any improvement in price? Are agriculturists better off? Has there been any relief in the indebtedness of the peasantry or the middle classes? Of real improvement in the economy of the country, I do not see any the slightest sign. And yet *Indian Finance* is proclaiming that Simla and New Delhi are getting ahead gloriously. These one-sided eulogies of the improvement in Government's position do a lot of mischief. The average man thinks that everything is on the mend. Haven't we turned the corner?—wistfully asks everyone of himself, turns to *Indian Finance* and lays the unction to his soul that the corner has been turned. The tragedy of the position is that we are nowhere near turning the corner."

To the charge of reiteration on the changed outlook in Government finances, *Indian Finance* will, I know, plead guilty ; but as for the impeachment that it has been content only to look at one side of the shield, it cannot, and need not, plead guilty. I need only reproduce the following extract from our *Commercial Supplement* :

> "While the Government of India have, thus, witnessed a surprising turn for the better in almost every detail which caused them trouble in the earlier phase, other economic indices continue to be disheartening. Trade has not improved. Prices, after slight rallies, have remained on the low side. Export trade is extremely quiescent. Internal trade is sluggish, as is shown by disappointing Railway traffic returns. Provincial Governments have, in most cases, still to face prospects of Budgetary maladjustments. Unemployment is acute. Business houses are still in the same predicament. Margins of profit, be it for the businessman or industrialist or banker, are hardly sufficient for making both ends meet. It is gold exports and currency expansion (made possible by the depreciation of the rupee) that are the prime—if not sole—causes of the betterment in Government of India finances. These factors have not brought a like relief to other interests and other sections."

I may go further and aver that the full story of the distress gold in India has been narrated only in these columns. It is *Indian Finance* that has, again and again, emphasised the full implications of distress gold in its relation to the economy of the country. Not many in Clive Street have ever bothered to estimate the gravity of this problem or understand it in its fundamentals. They have been content with lending silent support to the policy of the Government and registering unthinking confirmation of the views of the Government's spokesmen. To my mind, the distress gold that has been released from Indian hoards is a significant link between Government finances on the one hand and the coutry's economy on the other. Paradoxical as it may seem, it is true to say that the very distress of the population is the direct cause of the very comfort of the Government. To understand this paradox, one has to realise the part that distress gold has played in the improvement of Government's financial position. But for the distress widely and acutely prevalent in the country, all this gold would not have come out

of rural parts. But for this gold coming out, India could not have exported the yellow metal to the amount of Rs. 120 crores. But for these gold shipments of Rs. 120 crores, India could not have had the colossal favourable balance she has been enjoying. But for these colossal favourable balances, the Government of India could not have accumulated large sterling balances. But for these large sterling balances, the India Office could not have met their normal requirements and repaid some of the maturing sterling loans, without recourse to large fresh borrowings in the London market. But for the sparse borrowing of India in the London market, India sterling stocks would not have registered such sharp advances. But for the sharp advance in the price of India sterling securities, rupee securities in India would not have enjoyed booming conditions. But for booming conditions in rupee giltedge market, Government of India could not have put through their cash and conversion loan operations with such remarkable success. But for the remarkable success of the loan operations, the Treasury Bills policy of the Government could not have been so scientific and successful. But for the scientific Treasury Bills policy, interest charges should have been far higher. But for the saving in interest and other charges, the balancing of the budget would have been far more difficult.

It is true that *Indian Finance* has, time and again, referred to the change in the Government's budgetary and monetary position. But it has never suggested that the distress of the population is at all less acute. Such discussion as has been undertaken in our columns on Government finances is not by way of offering incense to the Olympian Gods but in order to indicate the directions in which this improvement can be availed of in a manner that would react to the good of the country. If, in these improved conditions, big conversion operations are undertaken and interest charges are reduced, there would be relief to the taxpayer. Lower borrowing rate for Government's loans means lower charges for the financing of industry. The easier money conditions that are thereby created should prove most conducive to a betterment in the prices of commodities. In fact, the most disturbing factor in the trade and money markets has been the constant incursions of the Treasury. Once the Government's position is assured, there is no chance of their butting in in a way that upsets and disturbs and disrupts money and trade markets. Sooner or later, the improvement in Government's finance is bound to make itself felt in improvement in the economy of the population. In order to hasten a development of this kind, it is necessary that the Government should have a clearer perception of what is meant by a national economic policy and a more active pursuit of such a policy.

In urging the need for the adoption of a national economic policy, *Indian Finance* has taken a lead over the past four years. Though the Bengal Chamber of Commerce, the Bengal National Chamber of Commerce and the Indian Chamber of Commerce have with curious unanimity demanded the establishment of an Economic Council, it was *Indian Finance* that, in the first instance, put forward the proposal for a Supreme Economic Council for India.

An Essay on the Nature & Significance of Economic Science: By Lionel Robbins: Messrs. MacMillan & Co., Ld. Pages 141: Price 7/6 net.

It is a common human failing to attach an exaggerated importance to one's own knowledge. Economists have a like partiality for their branch of study. But as a science, Economics has never commanded much respect either among other scientists or among the large mass of laymen. It is generally regarded as a fairly organised body of knowledge with a number of *a priori* deductions with a substantial, if not altogether unexceptionable, validity, resting for their usefulness at any given time on a laborious gathering of material facts. Economic controversies, for obvious reasons, loom larger in the public eye than those of other sciences ; and as even a layman can follow such controversies to a large extent they are thought to arise from the imperfections of a science which offers little help to the reduction of individual differences of opinion. This apparent lack of objectivity in economic study opens the door to intrusions of various kinds, till the nature and significance of economic science are buried under a mass of irrelevance.

To rescue the science from this predicament and thus to serve better the ends, for which this body of knowledge may be useful, is the purpose of Mr. Lionel Robbins in the book under review. An easy, but unquestionably necessary, task is to emphasise that a pure science can have nothing to do with ends. It may be that the established truths of a science may help the realisation of certain ends. But the science as such can pronounce no judgment as between two rival ends. The prevalent idea that economic science in its present state weights scientific opinion unduly in favour of an individualist, against a socialist, economy is due to a misconception and signifies a misdirected attack. Economic analysis is devoted largely, sometimes exclusively, to the individual pulls and resistances by a mechanism of prices and costs. It has most interest and utility in the exchange economy. In an isolated economy, whether it is that of a Crusoe on a lonely island, or that of a closed communist society, it is debarred from any but the simplest generalisations. The majority of the findings of economic science are, therefore, very handy to the supporters of present conditions which are in large part the subject of economic analysis.

But it is invalid to assume from this that the science as such can have a bias for one social end as against another. This point, which Mr. Robbins has brought out in an accurate, and yet telling, way, may well be developed even by the average economist when he is forced to defend himself against a charge of unscientific partiality for a particular system of organisation. But the harder task is at the same time, to impart to economic science a universality without which, any study must descend to the level of a field survey. If the registration of individual pulls and resistances in a system of prices and costs is the sole subject of economic study, it raises the individualist organisation, which is, after all, a mere incident, into a universal phenomenon. By the same token, it would exclude from its scope many other matters which have a palpable relation to the material welfare, which the invididual organisation is intended to promote. Hence, indeed, the diverse attacks on Economics, as the "dismal science," the "pig-philosophy" and all that downpour of derision against which economists have so far felt powerless.

Mr. Robbins is entitled to trounce those economists who have offered the sheepish apology that

after all bread and butter is also essential for philosophers and saints. Obviously, the fact that saints and philosophers need physical nutrition could be no excuse for a large army of intelligent men foisting, with plausible reasoning, an inadequate and unsatisfactory rule of life on the whole of humanity. In fact, the customary answer to the charge of pig-philosophy is a virtual admission of guilt, though the economist might feel innocent of encouraging low conceptions of life. Mr. Robbins traces with a sure hand the source of all this misconception. Economists, all of them, have a fairly clear idea of the scope of their study. They know what is their principal concern. But they have not troubled to delimit the subject matter of economics. They have no working definition of their Science. It is in his attempt to make up for this omission that Mr. Robbins shows his capacity for thought. He examines all the definitions of economics that have so long held the field, especially that of Professor Cannan who regards Economics as the science dealing with the causes of economic welfare. This is generally acceptable to Anglo-Saxon economists. But Professor Cannan himself points to a serious flaw in it, when he says that the "Economics of War" is a contradiction in terms, apparently because, since economics is concerned with the causes of material welfare and war is the cause of just the opposite, economics cannot have any concern with it. And yet post-War economics is concerned with the aftermath of the war. The will to war on a neighbour or other enemy, real or supposed, has as often subordinated other human desires, as, for instance, love of future provision has subordinated the desire for immediate consumption. War has claims on the attention of the economist, because the prosecution of hostility either by an individual or society involves his foregoing other needs of his or his being forced to engage in certain productive activity which he would otherwise have refrained from. The economic consequences of war are also visited on future generations through a number of problems of a particularly embarassing kind.

Mr. Robbins suggests, therefore, that Economics is concerned with that aspect of behaviour which arises from the scarcity of means relative to given ends. If it is realised that life is a perpetual choice of ends in the light of the limitation of means—Professor Marshall calls it a choice of evils—then it would be recognised that in this we have the running thread or common point of all the multifarious forms of individual and social action. The universality which apparently was missing in the elaboration of a mere exchange economy, would be regained at last. The activities of Crusoe imply a choice among the limited number of satisfactions open to him for enjoyment. Whether he ploughs the land in a primitive way or talks to his parrot, his activity is within the scope of economic study, if such action involves a choice of ends necessitated by scarcity of means. So are the orders of the Supreme Economic Council of the Soviet Russia. In the eyes of the economist there is nothing to distinguish these from the complexities of modern individualist economy except that the latter call for more laborious observation and analysis.

When economics is thus defined as the study of the disposal of scarce means which can be utilised for alternative ends, it will be seen that the economist as such need make no judgment on ends. He can regard the parson and the prostitute with the same objective interest without laying himself open to the charge of encouraging white slave traffic. He has no need to extol individualism or condemn socialism. His "subject matter is essentially a relationship between ends conceived as tendencies to conduct on the one hand, and the technical and social environment on the other."

The acceptance of this view would mean that some of the commonest expressions, in which the word "economic" is employed even by economists of great repute, would have to be discarded as inaccurate and misleading. The term "economic satisfaction" is one such. So is the "economic interpretation of history" unless it is made clear that it refers to the substantial instances in which this relationship shows itself in time. The new definition, or rather this refinement of old definitions, would also serve to shut out "the intrusions of amateur technology into discussions which should be purely economic." It defines the place of technology as determining at any given time the environment in which this choice of ends, which determines behaviour, is made.

In other words, it helps the emergence of a science of pure economics from an amorphous study which till now wallowed in a mass of material over which few people employed any genuinely selective faculty.

With Mr. Robbins' definition of economics, few would be disposed to quarrel, either on the ground of any theoretical inexactitude or in the suspicion that it militates against any one's pet idea in the economic field—economic in the conventional, not the new scientific, sense in which Mr. Robbins would have us employ the term. But when all is said and done, it would be difficult to regard economics as anything more than a study dealing with the causes of material welfare. Much as Mr. Robbins' definition might heighten the self-esteem of the economist as a scientist, it is difficult to believe that the science of economics would ever develop to a stage in which the economist would be adequately cognisant of all the alternative ends (with scarce means) which occur to the mind of man. No one will deny that the scarcity of means for most social and individual ends lies mainly, almost solely, in the insufficiency of material provision. Economic life is so organised that the large mass of mankind have to relegate other ends to a distant background. Man's energies are consumed in the effort to gain a livelihood. And socially too, to preserve a standard of material comfort has become the one preoccupation of every government, though conditions are little better for it. In these circumstances, it were best to pursue economic study with an eye to applied economics.

Mr. Robbins claims for pure economists the capacity to point out the costs involved in pursuing one end or the other. For the present, individual valuations are reflected in the prices of the market; and prices can at best reflect relative costs of various satisfactions, all of which are economic in the sense in which economics is defined by Mr. Robbins; so that comparisons between prices of different periods, an exciting pastime with statistical faddists, have only a very limited value without any claim to an unexceptionable validity. But what pure economist has yet been able to determine the rival satisfactions which individuals and society will have to forego, if they choose to eliminate the trials and uncertainties of an individualist economy by establishing a socialist organisation? Mr. Robbins has, no doubt, succeeded in giving a definite outline to the subject matter of economic study; but its confines are too far for an economist to exercise control over the realms of his enquiry. It were better far to recognise frankly that economics is a study undertaken with the definite purpose of making it easier for mankind to find the means of its material happiness. It might provoke the condign laughter of scientists and philosophers alike; but the attempt to dodge their criticisms through changes in definition must end in reducing the study to a state of practical sterility.

To say this is not to detract from the value of Mr. Robbins' *Essay*. It is the most stimulating work on the *nature* of economic study, though I personally believe his definition has tended to reduce its *significance*.

"JNAN."

OVERSEAS' NEWS:

By Air Mail

UNITED STATES OF AMERICA.

EARLY DAYS OF CRISIS.

President Rossevelt took the oath of office on Saturday, March 4, and in his Inaugural Address, called upon the nation to face boldly the facts confronting them.

"This is pre-eminently the time to state the truth—the whole truth, frankly and boldly", said Mr. Roosevelt. "Nor need we shrink from honestly facing conditions in our country to-day. This great nation will endure as it has endured. It will revive and will prosper." The President continued:

"Our greatest primary task, to put people to work, can be accomplished in part by direct recruitment, by the Government itself treating the task as we would treat the emergency of a war, but, at the same time, through this employment, accomplishing greatly needed projects to estimulate, reorganise and use our natural resources.

"Hand in hand with this, we must frankly recognise the overbalance of population in our industrial centres, and by engaging on a national scale in a redistribution, endeavour to provide better use of the land. Our task can be helped by definite efforts to raise the values of agricultural products, and with this, the power to purchase the output of our cities can be helped by preventing realistically the tragedy of the growing loss, through foreclosure, of our small homes. Our farms can be helped by national planning for and supervision of all forms of transportation and communications and other utilities which have a definitely public character.

"In our progress towards a resumption of work, we require two safeguards against a return of the evils of the old order. There must be strict supervision of all banking and credits and investments. There must be an end to speculation with other people's money. There must be provision for an adequate but sound currency.

"These are the lines of attack. I shall presently urge upon a new Congress in special session detailed measures for their fulfilment, and I shall seek immediate assistance of the several States. Through this programme of action, we address ourselves to putting our own national house in order and making income balance outgoing.

"In the field of world policy, I would dedicate this nation to the policy of the good neighbour—the neighbour who resolutely respects himself, and, because he does so, respects the rights of others—the neighbour who respects his obligations and respects the sanctity of his agreements in, and with, a world of neighbours.

"I am prepared under my constitutional duty to recommend measures that a stricken nation in the midst of a stricken world may require. These measures or such other measures as Congress may build out of its experience and wisdom I shall seek, within my constitutional authority, to bring to a speedy adoption.

"But in the event that Congress shall fail to take one of these courses, and in the event that the national emergency is still critical, I shall not evade the clear course of duty that will then confront me. I shall ask Congress for the one remaining instrument to meet the crisis—broad executive power to wage a war against the emergency, as great as the power that could be given me if we were, in fact, invaded by a foreign foe."

President's Proclamation.

The next day after his installation, President Roosevelt issued a Proclamation under an Act passed in 1917, ordering a complete banking holiday for five days, and expressly prohibiting the export of gold, the making of loans, payment of deposits and dealings in foreign exchange. The text of the Proclamation is as follows:

"Whereas there have been heavy and unwarranted withdrawals of gold and currency from our banking institutions for the purpose of hoarding.

"Whereas continuous and increasingly extensive speculative activity abroad in foreign exchange has resulted in severe drains on the nation's stocks of gold.

"Whereas these conditions have created a national emergency.

"Whereas it is in the best interests of all bank depositors that a period of respite should be provided with a view to preventing further hoarding of coin, bullion or currency, or speculation in foreign exchange, and permitting the application of appropriate measures to protect the interests of our people.

"Whereas it is provided in the Act of October 6, 1917, that the President may investigate, regulate or prohibit any transactions in foreign exchange and the export, hoarding, melting or earmarking of gold and silver coin or bullion or currency.

"Whereas it is provided in the said Act that 'whoever shall wilfully violate any provisions of this Act, and whoever shall wilfully violate, neglect or refuse to comply with any order of the President issued in compliance with the provisions of the Act, shall upon conviction be fined not more than $10,000 or be imprisoned for net more than ten years or both'.

"Now, therefore, I, Franklin D. Roosevelt, President of the United States, do hereby proclaim, order, direct and declare that from Monday the sixth day of March to Thursday the ninth day of March, both dates inclusive, there shall be maintained and observed by all banking institutions and all branches thereof located in the United States of America, and including its territories and insular possessions, a bank holiday, and that during the said period all banking transactions shall be suspended.

"During such holiday, excepting as hereinafter provided, no such banking institution or branch shall pay out, export, earmark, permit the withdrawal of or transfer in any manner or by any device whatsoever any gold or silver coin or bullion or currency, or take any other action which might facilitate the hoarding thereof. Nor shall any such banking institution or branch pay out deposits, make loans or discounts, deal in foreign exchange transfers or credits from the United States to any place abroad, or transact any other banking business whatsoever.

"During such holiday the Secretary of the Treasury, with the approval of the President, is authorised and empowered.

(a) To permit any or all such banking institutions to perform any or all banking functions.

(b) To direct, require, or permit the issuance of clearing house or other evidences or claims against the assets of the banking institutions, and

(c) To authorise and direct the creation by such banking institutions of special trust accounts for the receipts of new deposits, which shall be subject to withdrawal on demand without any restrictions or limitations, and shall be kept separately in cash or on deposit in the Federal Reserve Banks or invested in obligations of the United States.

As used in this order the term 'banking institutions' shall include all Federal Reserve Banks, national banking associations, banks, trust companies, savings banks, building and loan associations, credit unions or other corporations, partnerships, associations, or persons engaged in the business of receiving deposits, making loans, discounting business paper, or transacting any other form of banking business."

The provision, in the President's Proclamation, for the issuance of clearing house certificates, has led to much speculation about the future currency policy of the Government. It is surmised that the provision could only have been intended for the creation of a temporary inconvertible scrip, on the joint obligation of all the banks, in payment of deposits, in the place of the present system of cheques on the Federal Reserve Banks and currency bearing the obligation of the Federal Government. It is of interest to note that the question of solvency is the root of the American banking crisis. Of the 18,000 and odd banks left functioning, many are in truth bankrupt on account of the disastrous decline in the value of their assets owing to the slump, and cannot be said financially to be in any position of superiority to the thousands of institutions that actually failed within the last three years.

Two courses were open to President Roosevelt. One was to follow the cautious lines of traditional finance, and confine State assistance solely to the credit-worthy banks. The result of this policy would necessarily be to precipitate the doom of the remaining banks, and lead, for a time at least, to a further fall in prices and reduced purchasing power for millions of people who have had deposits in such banks. The second course was to follow a bold plan of controlled inflation, very much on the lines advocated by Mr. McKenna for Great Britain, up to a point of bringing about a recovery of prices, so that from out of that very recovery, the banks might be enabled to gather value from their now unrealisable assets.

Which of the two courses will President Roosevelt adopt? For the time being, he seems to be following the more cautious policy, forcing the majority of banks to remain closed, and permitting only a small minority of sound banks to reopen under drastic restrictions. If this policy is not to result in popular panic and shrinkage of all business activity, it is necessary that it must very soon be followed up by arrangements to enable the sound banks to take over the business of the insolvent banks, which implies the introduction of branch banking into America. In fact, the issue of licenses is already regarded as a virtual Government guarantee of all deposits.

Banking Reorganisation Bill.

That restriction in the number of banks permitted to do business is to be accompanied by a bold expansionist policy, is indicated by the Banking Reorganisation Bill which President Roosevelt signed on March 9, and which was rushed through Congress in record time.

The Bill, which embodies the suggestions made by the President in his message to Congress, provides for a new National currency of Federal Reserve Bank notes based on Government bonds, whereas the present reserve notes are based on gold. A vast increase in currency is contemplated by the Bill as more than $11,000,000,000 of Government bonds are now outstanding. It is estimated that actual expansion will be up to $2,000,000,000, and Federal printing presses are already working full steam ahead to provide for it.

The first use to which President Roosevelt put the Banking Reorganisation Bill was to extend the banking holiday at the expiry of the five days' moratorium already announced. Meanwhile, a White List of sound banks which will be allowed to resume full operations, is being prepared by the Treasury, and more than 3,000 are already on the White List. The number is expected to go up to a minimum of 6,000 banks. All the banks on the White List are expected to open simultaneously.

Since the signing of the Bill, Federal Reserve Banks have been asked to keep a watchful eye on all exchange dealings, and no bank is to be permitted "to engage in any foreign exchange transactions except those undertaken for legitimate and normal business requirements or reasonable travelling and other expenses, and the fulfilment of contracts entered into prior to March 6."

Balancing the Budget.

Simultaneously with the drastic measures adopted to deal with the banking crisis, the President has announced the wholesale reorganisation of Government departments as a means of balancing the budget. In a message to Congress, he declared that at the present level of expenditure, the Federal deficit would amount to $5,000,000,000 in four years' time, and if the budget was not balanced forthwith, national bankruptcy would be the inevitable result.

A 15 per cent. cut in the salaries of Government servants saving $500,000,000 and reductions in the pensions and bonuses of ex-soldiers are among the most imporatnt of the proposals of the President to reduce expenditure. He has given the nation the pledge of a 25 per cent. cut in Federal expenditure

Congress, political acumen of a very high order is a strong point in Mr. Roosevelt's character. He has already given evidence of this acumen in his choice of administrators to form the Cabinet. These comprise men drawn from all parties; radicals and conservatives, wets and drys, Democrats and ex-Republicans. They are bound by personal ties of intense affection and loyalty to the new President, as helpful a factor as can perhaps be possibly desired for the success of Mr. Roosevelt's task of recreating order from out of the financial crisis he has inherited from his predecessor.

GERMANY.

PARTIES IN THE NEW REICHSTAG.

The General Election which was held on March 5 gave a sweeping victory to the two governmental parties. They now command a majority of 33 in the new Reichstag with a combined total of 340 out of 647 seats. In the Landtag, they have secured 254 seats out of 474, with a majority of 34.

THE LAST FOUR GERMAN ELECTIONS.

	240	226	222	206
Various	4	...	...	...
Total Reichstag ...	577	608	581	647

An analysis of the election figures yields a number of interesting points. Of the two governmental parties, it is the Nazis that have won all along the line. The significance of the election results can be fully grasped only on a comparison with the results of the last three Reichstag elections held since September, 1930. It will be found that within less than three years, as many as six of the smaller German political parties (the People's party, the Economic party, the Hanoverians, the Christian Social and Agrarian parties and the State Democratic party of the Left) have been almost wiped out. The Communists, who appeared to be gaining in influence, and whose seats rose from 77 in 1930 to 100 on November 6, 1932, have sustained a heavy defeat with a loss of 19 seats. All the other parties in the Reichstag, including the Nationalists, have maintained an even balance.

The losses of all other parties which suffered a rout in the election, have gone to swell the gains of the Nazis. Their progress since the September, 1930 election has, in fact, been little short of meteoric. In this interval, they have more than

doubled their power and influence. And both the rapidity and the magnitude of their success point to an enormous change, during the interval, in the German political attitude towards National Socialism. Barely three years ago, it appeared to be the extravagant and fantastic creed of a few resolute cranks. But on March 5 this year, it almost took the nation by storm, and is now the greatest single political force in the country.

The election has proved a triumph to the Nazis, not only as against their opponents, but also as against their colleagues in the Government. Herr Von Papen cuts a melancholy figure with the gain of one Reichstag seat secured by his party as against the 92 additional seats captured by the Nazis. It is to Captain Goring, the Nazi lieutenant of Herr Hitler, that the honours of the election campaign belong. He and his Brown Shirts threw the Stahlhelm of the Nationalists into the shade in the vigour and brutality of their methods of "direct action." And the spirit in which the whole election was fought,—and the power of the Government was utilised in the service of Nazi political ambitions, is indicated in a speech delivered by Captain Goring at Frankfurt only two days before the election:

> "I hereby summon the whole line to the onslaught on Commission. My measures will not be hampered by legal considerations. It is not my business in this matter to practice justice, but only to annihilate and to extirpate. In future, nobody will enter the Government who does not come from Nationalist circles."

By whatever means achieved, indisputable Nazi supremacy is the outstanding result of the election. It is there. What use will be made of it, and what effect it will have on the internal constitution of the Cabinet, are two of the problems of immediate moment in German politics. The victory in this election has almost completely lifted Herr Hitler above any necessity to bow to the wishes of his incompatible colleagues in the Cabinet. He is the sovereign master of the whole situation; so soevereign, in fact, that he can, at will, easily alter the character of his Cabinet by purging it of all troublesome elements, and replace them with instruments more amenable to his influence. Even the dream of a two-third majority in the Reichstag, prescribed for any amendment of the Weimar Constitution, does not now seem unattainable. A successful bid for the support of the Centre partes, and it is done. Once master of a two-third majority, Herr Hitler will have the ground fully prepared for a straight march to political dictatorship even along the constitutional road.

Supposing such a majority proves difficult to secure, what then? There is little hazard in the prophecy that Hitler will still strive to grasp dictatorship, by means beyond the Constitution, if constitutional means fail. There is sufficient evidence of this in the ruthlessness with which Nazi chiefs like Captain Goring and Dr. Frick have already commenced to evict men of other parties from strategic positions in civic life and in police service, and replaced them with helpful and subservient agents of their own.

The reaction of the election on German stock exchanges has been decisively bullish. Herr Hitler's dramatic pledge to wipe out unemployment in four years, has roused great hopes of a vigorous economic and industrial drive under Government auspices. The result was that, in the wake of the election, the turnover of the share market was greater than it had been for weeks before, and commissions to buy flowed in from all classes of clients. Even the reports of the American crisis had no depressing effect on the German stock exchanges, on account of the buoyant influence of political events.

FRANCE.

GOVERNMENT'S NEW LOAN.

As a result of strenuous effort in both the Chambers, the budget deficit for 1933, has been brought down from 10,500 millions to about 5,816 million francs. This is the fourth deficit year in succession. In 1930-31, the deficit amounted to 6,708 million francs; in 1931-32, to 5,611 millions; and in 1932, it was about 6,000 millions.

To meet the budget deficit, it is proposed to raise a long-term loan. In July last, the Herriot Ministry raised 2,151 millions. Subsequent loan issues were 1,407 millions in September, and 548 millions in December. Thus, with the amount now required, the borrowing accomplished by the Government would be brought into the neighbourhood of 9,000 millions for eight months.

For the purpose of the new loan, a one-clause Bill was introduced on March 7, asking for authority for the issue of long or middle-term Treasury obligations, up to a maximum of 10,000 millions, "the proceeds to be utilised definitely to cover insufficiency of revenue during the financial years 1930-32." The Bill made no mention either of the issue price or of the interest offered. Naturally, it has aroused little enthusiasm in banks.

The Bill was adopted by the Chamber of Deputies by 360 votes against 185, but its omission to supply information on vital points, is regarded with considerable misgiving. It is feared that the omission was deliberate, and must be taken as a clue to the very high cost which it would involve, so high indeed that the Government themselves were not sure of sanction by Parliament, or rather, were quite sure of not obtaining such sanction, if the full terms and

conditions of the issue were revealed beforehand. This impression has been converted into a positive certainty by the resolute refusal of the Finance Minister to be drawn in by questions put in the Chamber on the subject, and his persistent resort to evasion as the only refuge.

The borrowing capacity of the Government would seem to have reached a stage of grave crisis. The impression had gained ground that the deficits of the Government have ceased to be temporary and become a permanent factor ; and loss of public confidence in Government's financial prestige has reacted adversely on their power to raise loans in the capital market at favourable terms, and entailed increasing difficulty for obtaining even temporary accommodation, and progressively heavy prices on capital loans. There is a vast amount of unemployed capital ready for investment in France, but the trouble is that investors are thoroughly disinclined to subscribe to Government loans because of their deep-rooted fear that the chronic neediness of the Treasury would impel it to go on raising the interest on future loans, thereby necessarily depressing the capital of stock for people already holding Government securities. The recent conversion operation, whereby the interest on Rents was reduced to 4½ per cent., with the result that it dropped subsequently in capital value, has not served to restore the diminishing confidence of the French investing public in Government loan issues.

Meanwhile, French finances are enmeshed in a vicious circle the effect of which must be a steady worsening in the financial position. With insolvent finances, borrowing cannot be done away with, but the cost of borrowing will mount up in proportion to its necessity. This enhanced cost must, in its turn, make a heavy inroad on income in the shape of interest on the public debt, and to the extent of that inroad, it will render the balancing of the budget more and more remote. The twin evils of debt and deficit bid fair for ever to nourish each the other with its evil potentiality and render the balancing of the budget an eternal impossibility. And yet, without a balancing of the budget, there is no prospect of a change for the better in the financial fortunes of France. A personality of outstanding political influence is required to mobilise a sufficiency of public support for measures of economy on the lines of M. Cheron's Finance Bill, for balancing the budget. But no such personality has as yet shown signs of appearing among the groups and parties of the Chamber of Deputies.

GREAT BRITAIN.

The announcement of a bank holiday in New York on March 4 created a feeling of such intense uncertainty in the London exchange market that all business in foreign exchange dealings had to be suspended for the day. It was fortunate that the crisis happened on a Saturday ; since the following Sunday provided sufficient respite which could be utilised by the principal representatives of London banks for making up their minds as to how the situation was to be dealt with.

When the exchanges opened on Monday, it was decided to discontinue business in American dollars pending the reopening of the U.S.A. banks. With New York put out of action, the sterling-dollar-franc triangle which had come to be the basis of world exchange dealings was temporarily broken, and interest centred on the franc. The British control at once came into operation to counteract any tendency for a large-scale flight of foreign currencies into sterling, as a result of the cloud in the fortunes of the dollar. There is, of course, a grave danger in this form of intervention. Exchange control can be effected only through holdings of *devisen*. If any real flight to sterling were to develop, the depreciation in the value of *devisen* therein involved, would not only mean heavy loss, it would sweep away the very instrument by which control is capable of being effected. With the worth of the dollar imperilled by the banking crisis, the exchange value of other currencies still on gold cannot be blindly assumed to be of superior sacrosanct quality, and the utility of seeking to control the pound in terms of currencies with uncertain future, must be seriously called into question. For this reason, the *Economist* is of opinion that the Bank of England will very soon have to face the problem whether the control of sterling should not be exercised by merely fixing the price of gold from time to time leaving the exchanges to shift for themselves. That is to say, that "sterling would be controlled in relation to gold directly, instead of indirectly as at present through the dollar or the franc.

The question of the foreign currency against which the pound should be pegged forms also one of the subjects dealt with in an interesting little book by Dr. Paul Einzig published this week under the intriguing title, "The Comedy of the Pound." The author holds the view that it is wiser to choose the stronger of two gold currencies both because the operation would require less use of sterling, and would entail little interference with the normal working of the gold standard in other countries.

But Dr. Einzig is more an opponent than an advocate of exchange control as effected by means of the Exchange Equalisation Fund. For the foreign exchange policy of the Government has been, in his opinion, "hopelessly mismanaged", and he gravely questions the advisability of publicly having a fund for control purposes, since it meant letting the whole world into the secret of Government's intentions and proposals. There is much sound sense in the objection, and Dr. Einzig is right in stating that the Treasury and the Bank between them could, at any time, make all the necessary exchange arrangements, without forfeiting that element of secrecy which is necessary for the successful materialisation of the intended objectives of operations of this kind. But where the Doctor blunders is in failing to realise that the magnitude of the work of the Equalisation Fund, involving as it does borrowing to the extent of some £150 millions, cannot possibly be accomplished without Parliamentary sanction and the appeal for Parliamentary sanction necessarily involves publicity.

FINANCE MEMBER'S TRIBUTE TO CENTRAL BANK.

SIR GEORGE OPENS DELHI BRANCH

At the opening of the new Delhi branch of the Central Bank of India, Ltd., Sir George Schuster, Finance Member of the Government of India, spoke before a large and distinguished gathering of officials, bankers and commercial men of influence and said:

"It is a great pleasure to me to have this opportunity of meeting a gathering of those concerned with this notable Indian institution and be able thus to testify my great interest in the progress of Indian banking. I might add, perhaps, it is also a great and unusual pleasure to find myself addressing an Indian gathering where I can speak as a friend among friends and not as one who knows that when he finishes, he will have to sit for two days listening to critical speeches from political opponents. These moments, when the weapons of political controversy will be laid aside are very welcome, for the task of the Finance Member during the last few years has been a heavy one.

"As regards the Central Bank, one of whose important branches I have come to open to-day, I need only testify my admiration for the unique position which it has achieved in the world of Indian banking. You, Sir Phiroze, have shown us in a striking and most interesting way what wonderful growth has been achieved. I can only say I trust that this bank will continue to grow in prosperity and advance step by step in importance, consolidating its position as each further step is taken.

"I feel sure that all who are concerned in the management of the Central Bank realise the magnitude of their responsibility. A bank such as this, though it is an example of private enterprise, carries, nevertheless, great responsibilities to the public. All deposit banks, of course, do this, and can never be run with regard merely to the making of profits for the shareholders. But a bank such as the Central Bank of India has a special responsibility for, on its sound management and prosperity, one can almost say the good name and credit of Indian banking is staked. I know that all those who are concerned with the management of the Central Bank appreciate this and you, Sir Phiroze, reminded us of this, when you said at the beginning of your speech, that "the aim and object of the promoters of this bank was to build up a national institution and prove that Indians were capable of managing their own affairs, when they are afforded an opportunity." You have succeeded splendidly so far, but your very success has increased your responsibilities for the future. I feel confident that you will live up to this responsibility.

"I hope, moreover, that in the future, other Indian banks will grow up, not as rivals competing with you for business, but as collaborators, which she needs. There is, indeed, ample scope for such a development, for a mere glance at the statistics which you have quoted shows, all too clearly, how small, as yet, has been the development of banking institutions in comparison with the vast size and population of this great country. I hope, moreover, the day will soon come when there will be so many great Indian banks and it will no longer be a matter for special comment that any particular bank is owned and staffed by Indians. When that day comes, I feel confident that any feeling of rivalry between Indian and Englishmen in the matter will disappar, for I am one of those who believe that although the time has come for a complete change in political direction in this country, nevertheless, the future interests not only of India and England but of the whole world, can best be promoted by close and friendly association on terms of complete equality between Indians and Englishmen.

The East and the West.

"One used to hear in one's schoolboy days of the well-known tag "East is East and West is West and never the twain shall meet." There may be certain truths underlying the tag, but in its general popular sense, I believe it to indicate a profoundly mistaken attitude which has done much harm. In any case, with the increasing development of rapid communication, the world is daily getting smaller and the East and the West are being brought into even closer contact. They got to meet and they got to understand each other. Speaking for myself, one of the things which impressed me most since I have been in India is the close co-operation and understanding which can be created between Indians and Englishmen. Another is the way in which what Lord Irwin used to call Political India has, as a result of two centuries of close association, absorbed some of the best ideals on which British traditions are based. I refer particularly, to the ideals of personal liberty and representative political institutions. If the West could also absorb all the best in Indian traditions, I think, perhaps, that would have been better for the world. I am sure those who believe a corrective is now needed to the extreme materialism of the West—in other words to Society which is based predominantly on the money-making motive —to the acquisitive sense which has developed among Western civilisation, I believe such a corrective may well come from close association with and understanding of a country like India. I trust India is strong enough to preserve what is best in her own ancient traditions in spite of closer contact with the West. Perhaps this may seem a curious line of thought in a speech made at the opening of a bank which, in some way, is so essentially based on money, and materialism, but in reality, I feel that the sentiment is not inappropriate, because as I have already pointed out, I regard a bank of this kind essentially as an institution which performs public service essential to any form of civilised society and which does so with no more than a reasonable remuneration and profit to all concerned.

"Economic ordeal by Fire."

"If I might continue on the theme of how India can gain by absorbing the best traditions of the West, I can certainly say most emphatically that as regards banking, India is likely to do best by following British traditions. The world, as everyone knows only too well, is at present going through a terribly severe crisis. It is a sort of economic ordeal by fire and under this ordeal, all that is good and true is showing up in contradiction to all that is bad and unsound. It is, indeed, encouraging to those who believe in British traditions to see how British institutions are coming through that ordeal for it is clear that only sound and solid banking institutions have best stood the test. One has only to compare the crisis through which England passed in September, 1931, with that through which the United States is just passing. England's crisis came

upon her from outside. In her position as the international banking centre of the world she naturally is both a debtor and a creditor to other countries on a stupendous scale. Her crisis really came about, because while she continued to pay her own debts, her debtors were unable to pay her. But throughout all the trouble the confidence of her own people, both in her own currency and in her own banking institutions, never wavered for a moment. In the United States, the position was exactly the reverse. She was not embarrassed by having to meet foreign obligations at a time when her own foreign creditors were failing to meet their obligations to her. Quite on the contrary, her trouble came about solely because her own people lost confidence in their own banking institutions. If any one wants to know why this happened, he has only to study the result of the recent disclosures before the Senate Banking Committee on Wall Street methods. It seems to me that the essential vice of all these methods arises when people depart from sound methods of business aimed at producing legitimate and moderate profits and expect, instead, to make quickly enormous fortunes, not by the creation of genuine productive power and real wealth, but by the manipulation of paper values on the stock exchange. The labourer is worthy of his hire, whether the labourer be a director of a big enterprise or capital which he employs, or the poorest worker in the fields. But when the labourer expects to get more than his fair hire, then he can only get it at the expense of others and unfairly. When that happens, not only does the whole business organisation become unsound as a business organisation, but the whole of human society suffers because the scramble for mere money-making blinds men's eyes to all those purposes and values which are of so much importance than mere money.

"I must apologise to you, Sir Phiroze, and to this gathering for having been led into something which sounds like a sermon. My excuse must be that the particular public duty which rests upon me, at the present, forces me always to appear before the public as one who thinks of nothing but finance and is out to forget all other aspects of human life. It is a curious fate which has cast me for this role, for my own philosophy leads my thoughts in quite a contrary direction. I trust therefore, you will forgive me if for once I behave like a boy out of school and say what I really think. Nevertheless, I must not carry this licence too far and I must return to points more closely connected with this special meeting.

"Finance only a means to an end."

"The underlying purport of what I have been saying is really this—that Finance is only a means to an end and that if it becomes more than that, it does harm in many directions. But it is a very important means, and there are certain conditions such as those which now prevail in which it becomes all-important. So far as public finance is concerned, its main object should be to preserve for any country conditions of confidence and security in which the whole mass of private individuals may conduct their ordinary business. Finance cannot by its own acts alone, create prosperity, because that depends on the activities of the mass of private individuals. But if it is mishandled, then such mishandling can, by its own acts alone, destroy prosperity, for it may introduce such chaos as to make it impossible for the mass of private individuals to conduct their business. At present, we are passing through times when any weakness of the State may really land the country in such a chaos so that consideration of Public Finance must take priority before everything. It is one of those occasions when one may say that the proper cry is "Hands to the pump" just to keep the ship afloat. But, in the meanwhile, those of us who are responsible for public finance, must very closely watch what is going on in the world of private enterprise. Nor must we lose sight of the future in concentration on our immediate task. For this reason, I have been very much interested, Sir Phiroze, in listening to what you have said as to the decline in the volume of trade bills throughout the country and your remarks have set up in my mind certain queries on which I do not at present propose to enlarge, but which I shall endeavour to follow up after this meeting.

"I should be very glad to have some further discussion on this matter, with you and your staff particularly, your Managing Director, Mr. Pochkhanawala who has made such a very special name for himself in the banking world in India. Your remarks on this subject have brought you to another important question, the establishment of a Reserve Bank. On this subject again, I cannot say very much to-day, except that it is one which will shortly be engaging our very earnest attention, for it has become the key-point in the whole plan of constitutional advance. I may add that I will give most careful consideration, so far as I have anything to do with this matter, to the remarks which have fallen from your lips, Sir Phiroze, to-day.

Indian Finance Minister's Special Difficulties.

"There was one passage towards the end of your speech to which it gave me particular pleasure to listen. I refer to your comments on the cordial relations established between your bank and the Imperial Bank of India and also to the greater measure of co-operation which has recently made itself manifest among the indigenous banks and British and foreign banks. Such co-operation is of vital importance to the future welfare of India. I would like to add another party to this co-operation, namely, the Finance Member or the future Finance Minister of the Government of India. The experience of England and indeed of all countries shows that in the present conditions when any particular crisis or difficulty comes upon the country, it is of vital importance that the responsible Minister of the Government should work in close co-operation with the central or Reserve Bank of the country and with all the leading banks. Here we are brought up against one of the difficulties of India, namely, its vast size and the absence of any single centre which is at the same time both the seat of the Government and the focus of the country's commercial activity. When we have been through crises in the past few years, I have frequently been tempted to compare my position with that of the Chancellor of the Exchequer in London. If you go to London and walk down Whitehall, past an unassuming door over which stand the words Treasury Chambers,' you will, every evening between 6 and 6-30 regularly see a motor car drive up and a romantic looking figure with a pointed beard and a broad black felt-hat get out and walk in. This is Mr. Montague Norman, Governor of the Bank of England. Every evening, on his way home from the Bank, he calls to see the leading officials at the Treasury and often confer with the Chancellor of the Exchequer. When any crisis arises in London, it is only a matter of a few minutes for the Governor to summon the chairman of the leading banks to meet him in his quiet parlour at the Bank of England. And the whole tradition and machinery in London is such that if anything in the nature of a crisis arises, everyone is ready at once to co-operate in a concerted policy. How different are the conditions in India! I sit here either at Delhi or Simla, removed by rail about a thousand miles from Bombay, about thousand one hundred miles from Calcutta and about thousand six hundred miles from Madras, the main centres. I have often wondered what would be thought if anyone were to suggest, for example, that the financial policy and administration of Europe were to be directed, from say, some small mountain village in the centre of

(*Continued on page 530*)

COMPANY REPORTS

NATIONAL BANK OF INDIA, LD.

The local Branch have received a cable from the Head Office in London intimating that the net profits for the year ending 31st December, 1932, including amount brought forward amount to about £729,007. It is proposed to pay a dividend for half year 20% per annum equal to £1-5-0 per share making 20% for the year, less Income Tax, to place £50,000 to Officers Pension Fund, £30,000 to Contingency Account and to carry forward £249,007.

PUSSIMBING TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	4,10,000	Block	...	4,10,000
Reserves	...	85,000	Crop A/c.	...	8,720

Profit & Loss	...	7,872	Investments	...	29,924
			Cash & Deposits	...	56,961
Total	...	5,14,315	Total	...	5,14,315

Extracts from Directors' Report:

Report for 1932. The outturn was only 1,428 maunds against the estimate of 2,200 maunds and a crop of 1,457 maunds 17 seers in 1931. The shortage is due to extremely unfavourable weather throughout the season and to the extensive damage caused by hail last April. Crop Sales realised Rs. 60,948-3-11, equivalent to a net average of 8.54 annas per lb. compared with 10.91 annas in 1931. Owing to the severe hail damage, no fine second flush teas were made and this and the very much lower market ruling throughout the season for the inferior quality which invariably follows hail combined to bring about the exceptionally low average. One small invoice of fine autumnal tea was manufactured at the end of the season and sold very well.

Comparative figures of expenditure are given below:—Estimated Rs. 1,07,300, Actual, Rs. 93,874-10-9. There is a deficit of Rs. 8,520-4-4 transferred from the Revenue Account to the Profit and Loss Account. After the adjustments disclosed there is a loss for the year of Rs. 6,531-13-0 which, deducted from the balance from 1931, leaves Rs. 7,872-7-4 at the credit of this Account to be carried forward to 1933, subject to your approval.

The Regulation of Exports Scheme provides for the export of 68½ per cent. of the highest crop in any year from 1929 to 1932 inclusive, which for this Company is 1929, but to ensure that the total quantity of tea remaining for consumption in India is not far in excess of the demand, which would have a disastrous effect upon the local market, restriction of crop also is definitely essential and we are therefore estimating for a total of 81½ per cent. of the 1929 crop, which is the figure indicated by the Indian Tea Association, as meeting both Export and local requirements.

CHANDPORE TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	2,50,000	Block	...	2,18,188
Reserves	...	73,316	Crop A/c.	...	31,677
Debts	...	5,528	Outstandings	...	2,341
			Cash	...	74,908
			Profit & Loss	...	1,780
Total	...	3,28,844	Total	...	3,28,844

Extracts from Directors' Report:

Report for the year ended 31st December, 1932. The Revenue Account shows a loss of Rs. 4,148-9-1, from which has to be deducted the amount standing at credit of Profit and Loss Account, Rs. 2,368-10-2, leaving a debit balance of Rs. 1,779-14-11, to be carried forward in Profit and Loss Account. Although there was some damage by hail early in the year, the crop harvested was in excess of the previous year. A substantial reduction in expenditure was effected but unfortunately prices were lower and a small loss on the season's working has to be recorded.

The following is a comparative return of tea marketed and average prices realised for the last three years:—1932, 4,669 mds. at As. 4-4 per lb., 1931, 4,445 mds. at As. 4-10 per lb.; 1930, 3,797 mds. at As. 7-8 per lb.

Tea to the value of Rs. 2,780 was sold to Russia on the 12 months' credit scheme sponsored by the Indian Tea Association.

For the current season the estimate provides for a crop of 4,400 maunds to cost Rs. 1,14,208 laid down in Calcutta, Jardine Skimmer & Co., Managing Agents.

COOLIEKOOSIE TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	1,30,600	Block	...	1,88,568
Reserves	...	37,299	Outlay	...	2,804
Debts	...	41,198	Outstandings	...	14,307
			Cash	...	3,418
Total	...	2,09,097	Total	...	2,09,097

Extracts from Directors' Report:

Report for the year ended 31st December, 1932. Results of the working for Season 1932 are as follows:—Loss as per Revenue Account, Rs. 9,455-13-9, to which has to be added the balance brought forward from season 1931, Rs. 20,244-8-4, making a balance at the debit of Profit and Loss Account, which has been deducted from Working Capital Account, Rs. 29,700-6-1. In view of the lower prices which ruled throughout the season, and the smaller crop manufactured, the results cannot be considered unsatisfactory.

The crop was again sold in Calcutta, particulars for the past three years being:—

Season	Tea Crop	Average price per lb.
		As. p.
1930	2,430 maunds	8 4
1931	2,853 ,,	5 4
1932	2,536 ,,	4 8

The fall in the average price for Assam teas on the Calcutta Market for season 1932, as compared with season 1931, was As. 2-1 per lb., so that a reduction of only 8 pies per lb. for this Company's teas may be considered satisfactory.

No additions were made during the year, but a new Fermenting House is at present in course of construction.

The total area remains the same as last reported, but 20 acres of unremunerative tea have been abandoned, leaving 457 acres under tea.

For the current year the crop allowed under the proposed Restriction Scheme (2,317 maunds) has been provided for at a cost of Rs. 65,915.

BELGACHIA TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	1,25,000	Block	...	48,247
Reserves	...	30,000	Crop A/c.	...	1,179
Debts	...	6,147	Outstandings	...	3,638
			Investments	...	51,434
			Cash & Deposits	...	10,480
			Profit & Loss	...	46,169
Total	...	1,61,147	Total	..	1,61,147

Extracts from Directors' Report:

Report for 1932. Against an estimate of 2,000 maunds the outturn was 1,850 maunds 18½ seers, the shortage being attributed to a drought at the beginning of the year and to severe mosquito blight in October. Crop Sales realised Rs. 40,303-15-3, equivalent to a net average of 4.36 annas per lb., compared with 5.58 annas in 1931. A useful standard of quality was maintained throughout the season and the depressed state of the tea market was entirely responsible for the low average.

Comparative figures of expenditure are given below:—Estimated Rs. 66,900, Actual Rs. 59,711-9-3. There is a deficit of Rs. 18,532-10 transferred from the Revenue Account to the Profit and Loss Account. After adjustments there is a Net Loss of Rs. 16,938-14-10 for the year, leaving a total deficit on this Account of Rs. 46,169-7-7 to be carried forward to 1933.

Estimates for 1933.—The Regulation of Exports Scheme provides for the export of 68½ per cent. of the highest crop in any year from 1929 to 1932 inclusive, which for this Company is 1930, but to ensure that the total quantity of tea remaining for consumption in India is not far in excess of the demand, which would have a disastrous effect upon the local market, restriction of crop also is definitely essential and we are therefore estimating for a total of 81½ per cent. of the 1930 crop, which is the figure indicated by the Indian Tea Association as meeting both Export and Local requirements. Crop 1,615 maunds to cost Rs. 60,000.

IRINGMARA TEA CO., LD.

Synopsis of Balance Sheet:

		Cash ...	2,879
		Profit & Loss ...	1,33,838
Total ...	4,00 626	Total ...	4,00,626

Extracts from Directors' Report:

Report for the Season 1932. The balance of loss carried forward from last season is Rs. 1,14,091-1-9, the loss for the season 1932 is Rs. 5,435-13-5, we have paid Interest Rs. 12,241-9, written off New Cultivation Rs. 2,069-5-3, making a total loss as at 31st December, 1932, Rs. 1,33,837-13-5, which we propose to carry forward to 1933.

The comparative outturn for the past three seasons is as follows:—1930, 179,748 lb.; 1931, 179,272 lb.; 1932, 265,086 lb.

This is 49,086 lb. more than the quantity estimated for. The total labour force on the garden at 31st December, 1932, was 599.

If the restriction scheme now under discussion is agreed to, the export will be 2,270 mds. or 181,600 lb. at a cost in Cachar of Rs. 52,740.

The Calcutta Expenditure is estimated at Rs. 10,685.—George Henderson & Co., Ld., Managing Agents.

GIELLE TEA CO., LD.

Total ...	5,96,193	Total ...	5,96,193

Extracts from Directors' Report:

Report for 1932. The outturn for the season was 2,555 maunds against the original estimate of 2,400 maunds and a crop of 2,630 maunds 26½ seers in 1931. Crop Sales realised Rs. 1,13,989-8 equivalent to a net average of 8.92 annas per lb. compared with 9.61 annas in 1931.

Comparative figures of expenditure are submitted below:—Estimated Rs. 98,100, Actual Rs. 95,100-15-11. After making provision for Staff Commissions there is a credit balance of Rs. 17,110-0-4 transferred from this Account to the Profit and Loss Account. The net profit for the year, after adjustments, is Rs. 18,348-10-9, and with the amount brought forward from 1932, there remains a final balance on this Account of Rs. 28,131,-15-3, which we propose, with your approval, to deal with as follows:—Pay the Preference Dividend for 1932, Rs. 12,000; pay a Dividend of 5 per cent. on the Ordinary Shares, Rs. 10,000; carry forward to 1933, Rs. 6,131-15-3; total Rs. 28,131-15-3.

The Regulation of Exports Scheme provides for the export of 68¾ per cent. of the highest crop in any year from 1929 to 1932 inclusive, which for this Company is 1931, but to ensure that the total quantity of tea remaining for consumption in India is not far in excess of the demand, which would have a disastrous effect upon the local market, restriction of crop also is definitely essential and we are therefore estimating for a total of 81¼ per cent. of the 1931 crop, which is the figure indicated by the Indian Tea Association as meeting both Export and local requirements. Crop 2,137 maunds to cost Rs. 1,00,500.

TEESTA VALLEY TEA CO., LD.

Total ...	5,29,921	Total ...	5,29,921

Extracts from Directors' Report:

Report for 1932. **Crop.**—The outturn was 4,202 maunds 18½ seers compared with the estimate of 4,000 maunds and a crop of 4,043 maunds 7 seers in 1931. A drought was again experienced early in the season but fortunately climatic conditions in the latter months of the year were distinctly favourable. Crop Sales realised Rs. 1,68,438-13-5, equivalent to a net average of 8.02 annas per lb. against 9.40 annas in 1931. The second flush teas were again disappointing, otherwise a useful standard of quality was maintained, but unfortunately a low market prevailed for everything except the best teas and these combined to bring about such a poor average.

Comparative figures of expenditure are given below:—Estimated Rs. 1,33,230, Actual Rs. 1,24,978-14-3. After provision for Secretarial and Staff Commissions there is a credit balance of Rs. 40,121-0-1 transferred from this Account to the Profit and Loss Account. The Net Profit for the year, after adjustments, is Rs. 43,992-13-10, and with the amount brought forward from 1931 there remains a final balance on this Account of Rs. 55,126-4, which, with your approval, we propose to deal with as follows:—Pay a Dividend of 10 per cent. for the year, Rs. 32,000; transfer to General Reserve Account (bringing this up to Rs. 1,20,000), Rs. 10,000; carry forward to 1933, Rs. 13,126-4; total Rs. 55,126-4.

The Regulation of Exports Scheme provides for the export of 68½ per cent. of the highest crop in any year from 1929 to 1932 inclusive, which for this Company is 1932, but to ensure that the total quantity of tea remaining for consumption in India is not far in excess of the demand, which would have a disastrous effect upon the local market, restriction of crop also is definitely essential, and we are therefore estimating for a total of 81¼ per cent. of the 1932 crop, which is the figure indicated by the Indian Tea Association as meeting both Export and local requirements. Crop 3,414 maunds to cost Rs. 1,26,500.

KUMARDHUBI FIRECLAY & SILICA WORKS, LD.

Extracts from Directors' Report:

Report for the year ended 31st December, 1932. The Revenue Account shows a loss of Rs. 40,148-13-10 and the Profit and Loss Account, including the credit balance of Rs. 10,842-15-11 carried forward from the previous year and allowing for Interest, etc., shows a debit balance of Rs. 54,245-14-9 to be carried forward.

Market conditions have remained unfavourable throughout the year. Manufacturing costs continue to receive our careful attention. While no provision for Depreciation has been possible, the efficiency of the plant and machinery has been fully maintained.

ARTHUR BUTLER & CO. (MOZUFFERPORE), LD.

Total ...	8,20,698	Total ...	8,20,698

Extracts from Directors' Report:

Report for the year ended 31st October, 1932. The Revenue Account, after making provision for Bad Debts, shows a loss of Rs. 31,378-9-1, and allowing Rs. 16,971-6-11 for Block Depreciation there is a balance to be carried forward at debit of Profit and Loss Account of Rs. 1,04,349-9.

In common with all Engineering Concerns in the country the Company has felt the full effect of the slump. Such work as was obtainable for Sugar Factories was unprofitable owing to severe competition. After the close of the period under review important building contracts in connecion with three large Sugar Mills have been secured and prospects for the current year are brighter than they have been for some time. The additional plant required to enable the works to deal with the heavy repair work required by Sugar Factories is now being installed and should prove an additional source of revenue.—Balmer, Lawrie & Co., Ld., Managing Agents.

Total ...	3,90,437	Total ...	3,90,437

Extracts from Directors' Report:

Report for the half-year ended 31st December, 1932, which, we regret, shows a loss on Revenue Account of Rs. 6,764-1-10. Taking into account the amount of Rs. 8,165-11-6 brought forward from the previous half-year, and Rs. 2,700, which the Managing Agents have again refunded from their allowance, the Profit and Loss Account shows a credit of Rs. 4,101-9-8. After setting aside Rs. 2,174-10-6 to Depreciation, there remains Rs. 1,926-15-2 which we propose to carry over.

As we indicated in our last Report, and concurrent with the general depression, conditions in the Lime trade have continued to be difficult. Offtake has been poor and it has been necessary to sell at reduced rates in order to secure orders.—Gladstone Wyllie & Co., Managing Agents.:—

Extracts from Directors' Report:

Report for the year 1932. You will see from the accounts that after providing Rs. 18,647-6-6 for Bonus to Staff and Operatives and Rs. 80,826-2-7 for Depreciation on Machinery, Buildings, etc., and after paying Income-tax and Super-tax Rs. 77,122-2 on the profits of last year, the profit for the year 1932 is Rs. 2,03,338-4-11 which added to the balance brought forward from last year Rs. 22,056-5 makes a total of Rs. 2,25,294-9-11 which it is proposed to deal with as follows:—Dividend at 30 per cent., Rs. 1,95,000; Charity for the Development of Local Industries, Rs. 1,059-0-11. balance carried forward, Rs. 29,335-9; total Rs. 2,25,394-9-11.

During the year under review, a sum of Rs. 880 has been paid to the shareholders of the 11th and 12th dividends forfeited, and a sum of Rs. 896 has been paid to the members of the Sub-Committee appointed under the resolution of the Extraordinary General Meeting dated 29th November, 1931. These require your confirmation. We are glad to say that in spite of continued economic depression during the year under review, our Company has been able to make a good profit. Your Directors are glad to note that the management of the Mills under Mr. P. S. Sathappa Chettiar has been highly satisfactory with the result that the Company is able to keep up he high rate of Dividend and hope that the working for the year 1933, would also be very profitable. Your Directors resolved to indemnify Mr. P. S. Sathappa Chettiar, Secretary, Banker and Local Agent, against loss and expenses sustained and incurred in the criminal cases in due performance of his duties and office. Your Directors have, therefore, sanctioned the payment of Rs. 35,000 to the said Mr. P. S. Sathappa Chettiar, Secretary, Banker & Local Agent, and we recommend that the same be set off against Reserve Fund.

SARAN ENGINEERING COMPANY.

Extracts from Directors' Report:

Accounts for the six months ended September 30, 1932, show a profit on revenue account of Rs. 39,427, add balance at credit of profit and loss account on April 1, 1932, Rs. 9,116. Deduct amount placed to depreciation Rs. 6,132, leaving at credit of profit and loss account Rs. 42,411. This balance they recommend should be disposed of as follows:—Transfer to reserve fund Rs. 30,000; carried forward Rs. 12,411. With the expansion which is taking place in the Indian sugar industry, the volume of engineering business offering has increased and, for the greater part of the period under review, the works were kept well employed. In spite of the continued economic depression, satisfactory progress has been made in disposing of the agency stocks of the Cawnpore and Muzafferpore branches and also the realisation of their relative outstandings.

Extracts from Directors' Report:

Accounts for the half-year ended December 31, 1932. The profit earned during the half-year amounts to Rs. 24,099, which, together with the amount standing at credit of profit and loss account, amounts to Rs. 89,310 which the directors recommend be dealt with as follows:—To dividend at Rs. 6 per Rs. 100 share, Rs. 24,000; and the balance Rs. 65,310 be carried forward to current half-year's account. The buildings and presses have been kept in good working order. Mr. T. C. Duncan retires by rotation from the board at this time but is eligible for re-election. Mr. R. Ferguson having returned to Calcutta resumes his seat in the board in place of Mr. G. C. Sweet. The prospects for the coming half-year are unfavourable owing to the prevailing depression in trade. Owing to the silting up of the river, it has become necessary to extend the present jetty by 150 feet at a cost of Rs. 24,432. This work will be taken in hand and completed during the coming six months.

BRITISH CEYLON CORPORATION, LD.

Synopsis of Balance Sheet:

Total ...	51,03,380	Total ...	51,03,380

Extracts from Directors' Report:

Report for the year ended 31st October, 1932. Before providing for depreciation the net profit for the year amount to Rs. 36,383.61 brought forward from he previous year. An interim Dividend of 3 per cent. per annum was paid on the Preference Shares on 30th April, 1932, absorbing a sum of Rs. 45,000 and since the

close of the financial year the balance of 3 per cent. per annum due for the year ended 31st October, 1932, has been paid. A sum of Rs. 1,22,267.89 has been written off for depreciation and a further amount of Rs. 35,000 has been transferred to Income Tax Reserve, leaving the sum of Rs. 1,84,706.35 available for distribution. Your Directors propose to deal with this amount by the payment of a first and final dividend of 7 per cent. per annum on the Ordinary Shares, absorbing Rs. 1,57,500 and to carry forward the balance of Rs. 27,206.35 to the new year's accounts.

Except for the necessary stoppages for cleaning up and changing over, etc., the electrical machinery installed in 1931 has been running smoothly and satisfactorily throughout the year. The quantity of oil turned out exceeded last year's output by some 835 tons.

Under the conditions prevailing in the market for this commodity and the likelihood of their continuance, it has been found impossible to run the Mills at a profit and after mature consideration your Directors decided that it would be to the nterest of the Shareholders that this branch of the Company's activities should be closed down. The Desiccating Mills were, therefore, placed on a care and maintenance basis at the beginning of October last and the properties arrived in Colombo. The Estate has contributed a small general conditions on other estates in the neighbourhood, and machinery will be sold as soon as favourable opportunities occur.

The output of Poonac for the year exceeded the previous year's output by nearly 500 tons and all the poonac turned out met with ready sales at fairly satisfactory prices.

It was considered advisable during the year to instal a modern drum welding plant manufacturing the latest type of drums. This is now working satisfactorily and it is conxdently hoped, will lead to a considerably larger output of drums for which in normal times there would appear to be ready sales.

This Estate is in extent approxinately 578 acres. The Estate was visited in November last by Mr. C. de E. Collin who expressed himself as thoroughly satisfied with its general appearance. The young areas are making steady progress towards maturity and, as time goes on, this estate should prove a valuable asset to the Company. The crop for the year amounted to 6,09,309 nuts as against a crop of 6,33,531 nuts for the year 1930/31. The shortage in crop was due to unseasonable weather in the early months of 1932, and is in accordance with the general conditions on other estates in the neighbourhood. The nuts were converted into Copra which was taken over by the Company at the market price of the day on arrival at Colombo. The Estate has contributed a small profit of Rs. 753/23 during the year which amount has been written off the capital value of same.

These stand in the Balance Sheet at the same figure as at 31st October, 1931, viz., Rs. 91,875. The only investment now held by the Corporation consists of 45,000 Ordinary Shares of Rs. 10 each Rs. 3 paid, in the Orient Co., (Ceylon) Ld. This Company improved its position during the year by a sum of Rs. 5706/88.

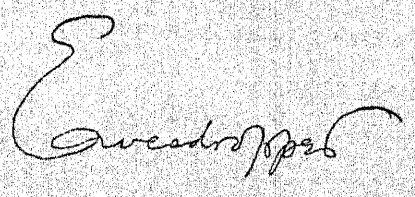
In accordance with the wish expressed at the last Annual General Meeting an Extraordinary General Meeting of the Ordinary Shareholders was held on 20th February, 1933, when it was decided that in future Preference Shareholders should be allowed to attend and vote at Meetings. This resolution was subsequently confirmed at an Extraordinary Confirmatory Meeting held on 8th March, 1933. The opportunity was taken at the same time to amend certain other Clauses of the Articles of Association which had become obsolete owing to the termination of the Agreement with the former Managing Agents.

It has been apparent for some time past that the Company has not been able to employ usefuly all of its capital and after giving the matter careful consideration your Directors have come to the conclusion that it would be in the best interest of both classes of shareholders if some of the capital were repaid.

They propose therefore in due course to send out Notices calling Special General Meetings to consider and, if thought fit, to pass resolutions to repay Preference Shareholders a sum of Rs. 5 per share thereby reducing the capital of the Company by 7½ lacs of rupees making the nominal value of each Preference Share Rs. 5. There after the approval of the Court will have to be obtained and Rs. 5 per share would be refunded in cash to the Preference Sareholders as soon as convenient to the Company. Before definitely proceeding with the scheme the Directors would, however, welcome some expression of opinion from the Shareholders in order to ascertain what measure of support the proposition is likely to meet with and with this end in view the matter has been placed on the Agenda for the Annual General Meeting.

(Continued from page 518.)

Sir George Schuster will bear me out when I say that I should have discused this matter with him on more than one occasion, even before Sir Arthur Salter came out to India. Now that European commercial opinion and Indian commercial opinion are agreed on the need for an active identity of the State with a national economic policy, I hope that in the favourable atmosphere created by an absence of embarassment for the Government in their finance there will be a powerful drive, under the joint auspices of the Government and the governed, of Europeans and Indians, for the adoption of all those measures which will re-vivify and re-vitalise the economic conditions of India. Meantime, I may tell my Clive Street friend that the improvement in Government's finance is not without significance to the well-being of the millions in the country. In one sense, the comfort of the Government's position is the result of the distress of the people. But in another and more important sense, the very comfort of the Government's position will be the starting point of sustained and many-sided effort to strengthen national economy.



(Continued from page 526)

Switzerland, with the main commercial centres at Glasgow, Constantinople and Moscow, the distance of which from the middle of Switzerland corresponds fairly closely to the distance of Bombay, Calcutta, and Madras by rail from Delhi, to say nothing of Simla. I think, at least that such a graphic comparison would make them appreciate some of the special conditions which make the central direction of policy so difficult in India. No doubt, the telephone has come to help us and in future, we shall see great improvements in its use, which may make a profound difference in the possibility of close intercommunication, but telephone conversations connot replace daily personal contact and the difficulties for the Finance Minister in India will always remain very great. He will, therefore, need to rely all the more on public-spirited help from the main leaders in the banking world and that is where a bank such as the Central Bank can be of such great value in the future and where people like the leaders of this bank will be able to play so great a part.

"I can only say that if I were in the place of an Indian Finance Minister of the future, I would try to keep very close touch with you, Sir Phiroze and with Mr. Pochkhanwala, and I would make a great point of telling you that you must have a very good man indeed at your Delhi branch. No doubt, I should say to you that you must keep Mr. S. C. Fozdar, and not only that, but that he must be in your fullest confidence, and able to talk things over. I can also foretell that if I were in the Finance Minister's place, I should do my best to encourage that creation of other banks, like the Central Bank—though as to this, I am afraid I should have to recognise that it is not really the Government that stimulate such development—for great banks, if they are to be of any value, must develop as a process of natural growth, preferably starting from small beginnings and as I have said, once before, advancing step by step, gaining experience as they go and consolidating each step before further advance is made. All those who are engaged in private enterprise and who will devote their energy and capital to fostering growth of this kind, will be doing real public service to India of the future.

"I am afraid, I have kept you a long time, and I must not detain this meeting any longer. I should only like to repeat again, in conclusion, that it has been the greatest possible pleasure to me to come here, to-day and that I am most grateful to you, Sir Phiroze, for having done me the honour of inviting me. May the future of the Central Bank and this Delhi branch be a prosperous me."

WORLD OF INDIAN FINANCE

Calcutta, March 31, 1933.

The market has experienced a fairly acute spasm of stringency. Towards this firming up, one of the contributory causes, whose effect is necessarily of short duration, is, possibly, the window-dressing arrangements of banks like the P. & O. Banking Corporation and Allahabad Bank who close their accounts as on March 31. To the extent that there has been, on this account, any special demand for funds, the monetary pressure should be correspondingly reduced as from to-morrow—at any rate, as from early next week. As a matter of fact, credits were in good demand in the early banking hours to-day ; but, towards the finish, the enquiry had considerably abated. There is, however, a far more important factor to be taken note of in connection with the firmer money conditions of this week. This change in the money market was anticipated in these columns last week when we wrote as follows :

> "Those who are in intimate contact with banking circles are inclined to think that there may be, in the next few days, a greater steadiness in the money market. It is believed that owing to the futility of remitting funds to London where, too, remunerative employment of funds is difficult, and owing to the yield on Treasury Bills declining to so low a level as 1½ per cent., banks are turning more and more to government securities."

The forecast in this regard has come true ; and the correctness of the underlying causes of the steadier money market has been confirmed. From the enquiries that we have made, we understand that banks have gone in, on a considerable scale, for investment in giltedge. Short-dated securities of all descriptions have received good attention in banking circles. Professional operators have bought longer-dated scrips for substantial amounts. Ultimately, these purchases of securities by dealers and jobbers are being financed by loans taken from banks. These loans are in great vogue in Bombay. Even in Calcutta, there is more widespread interest in government securities on the part of a new class of jobbers. Hardly anyone of some means in any important business house has now kept free from a "flutter" in giltedge. It is common to find that accountants and assistants hold half a lakh at least of 3½ per cent. Rupee Paper or 4 per cent. 1960-70 loan. We believe that holdings of this class in Clive Street are now substantial. These holdings are also financed from funds borrowed from banks. This means that in Bombay and Calcutta, an increasing part of he surplus funds of banks is being employed in the way of loans to jobbers of various descriptions in securities. Banks themselves are, as has already been stated, increasing their holdings in securities. The combined effect of these developments is to cause a considerable reduction in the surplus funds in financial circles. We do not, therefore, look to see the revival of such easy conditions as were witnessed a fortnight ago when funds were literally unusable. Nor is there, however, any reason to apprehend the present steady feeling becoming transformed into acute stringency. As a matter of fact, what has happened is the very result of, and an escape from, a state of the money market in which money was so easy as to be unemployable. Happenings herein discussed have the effect of creating a better balance and a more healthy equilibrium in the money market.

In spite of the better demand for money and the higher rates, the progressive decline in the average discount rate on Treasury Bills did not receive any setback on this week's tender-day. It is true that the total amount of applications received was substantially lower than in the previous week. As against Rs. 4.20 crores tendered on March 22 applications on March 28, were only Rs. 1.56 crores. But the average rate of accepted tenders was Rs. 1-2-6 this week as compared with Rs. 1-3 last week. The total amount accepted came to Rs. 1.46 crores. After the rapid decline in the discount rates from Rs. 1-14-7 a month ago to Rs. 1-3 a week ago, the decline of ½ anna per cent. in the current week is inconsiderable. But it must be remembered that the rate now ruling is so low that there will be considerable resistance to further declines. While, therefore, there could not be any striking variation in the average rate of accepted tenders in the coming weeks, there is hardly any reason to suppose that the steadier conditions in the money market would result in the receipts on account of Treasury Bills falling very much short of the full weekly quota of Rs. 1½ crores. It must also be added that the smallness of

tenders this week is due to the absence of any Treasury Bill maturities. We do not, therefore look forward to any adverse developments in the Treasury Bills situation.

On the other hand, it is quite possible that, as and when the loan programme is announced, it will contain a provision for a modest cash loan. The inclusion of a cash loan in this programme would, doubtless, be due to the announcement made this morning that the 4 per cent. 1931-36 Conversion loan of Rs. 9.90 crores is to be redeemed on July 1. But the market is likely to interpret the cash loan as a step in the funding of the floating debt. As a matter of fact, if the holders of 1931-36 loan should assent to conversion with more alacrity than was shown in the case of the last February loan, it will result in the cash receipts of the next Rupee loan yielding such surplus resources to the Treasury as would enable them to have an even stronger Treasury Bills policy than has been the case hitherto. From every point of view the Treasury Bills position is under the full control of the authorities. The total outstandings are between Rs. 25 crores and Rs. 30 crores; and the latter figure may be taken as the outside limit. A floating debt of less than Rs. 30 crores is barely sufficient to meet the requirements of the Indian money market in its changed outlook towards Treasuries. So long as short-term bills are only of the smallest size, there is bound to be great competition; and this very demand will keep the rate on a basis that will continue to be extremely favourable to the Government.

This morning's Notification that the 4 per cent. loan is to be paid off has lent further point and emphasis to the reports current in business circles as regards the impending conversion loan. There can now be no doubt that there cannot be much delay in the announcement of the Government's plans. All indications would seem to point to two likely features of such plans: (1) the loan is sure to be of medium maturity, which means that the issue will be a 3½ per cent. loan; (2) the loan programme may not be a pure and simple conversion loan, but also contain an element of cash loan. In visualising the prospects of success of the operations in this regard, it is necessary to realise the fundamental change that has taken place in the position and capacity of the Government in the matter of initiating and carrying out such operations as will have an effect on giltedge prices. Because of the large-scale purchases that were made in this quarter for the purpose of lending support to the securities market, the Government are now in possession of a big parcel of securities. The significance of this position is that if in the future the need should arise for recourse to like operations, the Government would not hesitate to initiate or be half-hearted in executing suitable measures as the lesson of the adoption of this policy in these three months is that it is the aptest aid to the success of a new loan. The further significance is that if, however, speculators push up securities to giddy heights—a position resulting in a lack of balance between India sterling securities and India rupee securities—the Government have now the requisite power and the requisite stock of securities to arrest such unharmonious or ill-timed advance in prices and ensure a rough parity between the prices in London and those in India. For the first time after two years, Rupee securities have forged ahead of sterling securities to-day. But an instantaneous corrective was administered. We do not suggest that the sharp decline in prices after the sharper advance was caused by sales of securities by the Government. But we do say that the market would do well to understand that the Government have now the power and the policy to administer correctives if developments of a hectic nature should take place in the giltedge market.

The market closed quiet, but with a very steady undertone. There were very good sellers at 1s. 6 1/32d., with business possible at 1s. 6 1/16d. On the weekly sterling tender day, applications for £150,000 at 1s. 6 3/32d., were received and allotted in full. Tenders for £3,330,000 at 1s. 6/16d., were

FINANCE ABROAD.

Now that the banking situation in the United States has become more or less normal, it is perhaps desirable to examine, in some detail, the various factors that are likely to affect the position of the dollar on the gold exchanges of the world. Ever since the reopening of the American markets, after the recent crisis, dealings in the dollar have been conducted on orderly lines ; speculative interests have not been particularly large and the fluctuations in terms of other gold currencies, principally francs, have not been beyond the legitimate bounds of the gold points. The dollar-sterling exchange, which in the early days showed a tendency to move up towards the 3.50 level, has, by the judicious intervention of the official 'control' in London, and the pegging of sterling in relation to the franc, been brought down and kept steady during the week round about 3.42.

Notwithstanding this relative steadiness, there is a distinct undertone of uncertainty owing to the unwillingness of the American authorities to declare their exchange policy even after such a lapse of time after the crisis. It was expected, early in the week, that a communique would be issued, defining the official attitude and relaxing the embargo, now in force on the export of gold. This statement has so far not been published, and the absence of any pronouncement is naturally causing some concern to operators in the American exchange.

At present, the exchange market in America is working under restrictions very similar to those imposed in England immediately after the suspension of the gold standard. Payments in gold are prohibited and banks are not permitted "to engage in any foreign exchange transactions except those undertaken for legitimate and normal business requirements or reasonable travelling or other expenses and the fulfilment of contracts entered into prior to March 6." Fortunately, however, for the American authorities, the position of the New York market in relation to foreign short-term funds has been such as to render the control of exchange operations a very light one. In fact, the threat to the dollar from foreign balances employed therein definitely disappeared as long ago as the middle of 1932 and in the subsequent flight from the dollar, the only institution that had to acquire substantial dollar resources was the Bank of England, whose enlightened policy in regard to the safeguarding of the balances was such as not to cause any undue embarassment to the Federal Reserve authorities.

One of the salient features of the American crisis has been the extraordinarily level-headed attitude of London towards the dollar. Financial circles in London have throughout held that the dollar is unassailable by foreign interests and that the problem of America is not an exchange problem at all but a banking problem, pure and simple. Foreign balances in New York since June, 1932, could have hardly been more than the absolute minimum necessary for the day-to-day operations of inernational banking and even the entire withdrawal of these balances, which would be hardly possible, could not affect the 'free gold' of the United States Reserve system.

A close examination of the weekly returns of the Federal Reserve Banks during February and the first week of March amply bears out the fact that the crisis, which developed in those days, was one which threatened the international convertibility of the dollar more than the maintenance of its external value. During the four weeks preceding the banking suspensions, gold was paid out to the extent of $564 million and currency expanded by $1,485 million to meet the demands of the member banks who financed this efflux of currency and coin by drawing on their deposits with the Reserve Banks to the extent of $620 million and increasing their rediscounts by $1,442 millions. From the two returns issued subsequent to the reopening of the banks, it is found that gold of the value of $510 million was returned to Reserve Banks. Part of this amount, no doubt, represents the return of gold hoarded over an extended period of time, but even making allowance for this fact, it is obvious that gold earmarked or withdrawn by foreign banks could not have been very large and that it was purely the domestic demand on an unprecedented scale that nearly forced the dollar off the gold standard and rendered the general moratorium inevitable.

In assessing the factors affecting the maintenance of the external value of the dollar unimpaired, it is important to remember that the enactment of the Glass-Steagall Act on February 26, 1932, has made a considerable difference to the power of the Federal Reserve Banks to regulate the value of the currency. What this Act does is not to reduce the statutory minimum reserve requirement in the form of gold, but to liberalise the provisions relating to other eligible cover for bank notes by placing government securities in the same category as commercial bills, so that, at a time of trade depression when commercial bills are in short supply government securities could be utilised to fill the deficiency rather than draw on gold for this purpose. For instance, just before the Passing of the Act, the Federal note issue was covered to the extent of 75 per cent. by gold, by reason of deficiency in eligible bills. And the effect of the passing of the Act was to release the excess amount of gold which had to be held as note cover and increase the "free gold" from $450 million to $1,200 millions. The free gold according to the latest return is $900 million.

The new Bank Act has created a class of notes, known as the Federal Reserve Bank Notes, which are treated as distinct from Federal Notes, the former requiring a backing of government securities only coupled with a redemption fund of 5 per cent. in gold, while the latter requires a minimum of 40 per cent. gold. The former class of notes is inteded to impart liquidity to the banking system ; and any expansion of currency based on the eligible assets of the commercial banks would not increase the total available credit in the country and would not bring about any inflationary position. Such addition to the currency really take the place of bank deposits and considering that an amazingly large percentage of the country's bank deposits is frozen in the small banks of the West and Middle West, fears of expansion of Federal Reserve bank notes threatening the gold value of the dollar are very remote. In fact, the continued maintenace of the gold standard in the modified form which has come to be known as the gold bullion standard is an easy proposition. When it is remembered that in the recent crisis, currency was hoarded in preference to money being left in banks, there is clearly no immediate fear of flight of capital on any large scale from the country ; and the conclusion is, therefore, irresistible that nothing in the American situation warrants the divorce of the dollar from gold. Short of the United States authorities deliberately deciding on the devaluation of the dollar as a means of giving relief to the huge mass of internal indebtedness, the dollar should continue to maintain its parity with the franc. As far as sterling is concerned, however, the Bank of England is the determining factor as to the future course of the dollar-sterling exchange.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.

(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

The Company issues Policies covering :—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

MOTOR CARS - - -
MOTOR CYCLES - - -
COMMERCIAL VEHICLES

NATIONAL INSURANCE BUILDING,
7, Council House Street, Calcutta.

BUY

CENTRAL BANK'S 3 YEARS CASH CERTIFICATES

FREE LIFE INSURANCE POLICIES

Every Rs. 88/8 deposited will bring you Rs. 100/- after three years which works out at the rate of 4⅓ per cent Compound Interest.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 3 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3¾ per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 4 per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.

For further particulars please apply at any one of our Branches.

COMMUNIQUES AND RETURNS.

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Tuesday, March 28. The total amount offered was Rs. 1,56,50,000. Tenders at Rs. 99-11-3 and above were accepted in full and lower tenders rejected. The total amount accepted was Rs. 1,46,25,000, the average rate of accepted tenders being Rs. 1-2-6 per annum.

Tenders for Rs. 1½ crores of three months Treasury Bills will be received on Monday, April 3. Successful tenderers should make payment on Wednesday, April 5. Other conditions are as usual.

STERLING TENDERS.

The Controller of the Currency notifies that on Wednesday, March 29, tenders to the amount of £150,000 at 1s. 6 3/32d. were received and allotted in full. Tenders for £3,330,000 at 1s. 6 1/16d. were also received and allotted approximately 25 per cent.

On Wednesday, April 5, £1,000,000 (one million) will be offered for tender on the same conditions as previously announced.

MARKET REVIEWS.

CALCUTTA STOCK EXCHANGE.

(By our Correspondent).

Calcutta Thursday Evening.

Jute.—This section was quiet but steady during the period under review. As usual the fluctuations in Howrahs and Kamarhattys was confined within very narrow margins. Hessian prices also dropped down to Rs. 8-3 in the absence of any buying enquiry from overseas. Jute also was steady at a drop although mills were not interested. Even the appearance of cloud was taken as a bear factor and every effort was made to pull down prices. The attention of professional speculators is entirely devoted to sales and purchases of 3½ per cent. paper, which has gained in popularity and which fluctuates widely during the course of a single day. Among bigger denominations, enquiry was confined to small lots. Anglo-Indias were placed at Rs. 269-8, Ballys at Rs. 106, Gondolparas Rs. 699-8, Kamarhattys Rs. 369 and later et Rs. 371, Budge Budge Rs. 290, Dalhousies Rs. 340, Standards Rs. 260 and Kankinarrahs Rs. 357. Among the Rs. 10 stocks, Presidencys were dealt at Rs. 4-6, and Rs. 4-8, Empires Rs. 30-12, Nationals Rs. 19, Reliance Rs. 62-8; Megnas were quoted at Rs. 20, after a long time, with buyers over. The general tone of the market is quiet but steady.

Cottons.—Dull conditions have obtained and only a minimum of transactions were put through. Kesorams (Ordy.) changed hands at Rs. 3-14 and Elgin Mills (Ordy.) at Rs. 56. Bengal Nagpore (Ordy.) may nominally be quoted at Rs. 20, and Dunbars (Ordy.) at Rs. 95.

Coal.—Except for some enquiry in Amalgamateds round about Rs. 12-12 there has been nothing of any interest reported in coal shares. Burrakurs (Ordy.) were on offer at Rs. 9-4 ex dividend. Bengals were dealt in at Rs. 211 and Equitable at Rs. 15-10. Pench Valley recorded a deal at Rs. 29-2. Among the lower priced stocks Talcher kept remarkably steady round about Re. 1-9.

Miscellaneous.—Very little interest was evinced in this section. Among the Iron and Steel shares Bengal Iron changed hands at Rs. 2-6 and Indian Iron and Steel at Rs. 5-6. Engineering shares have been neglected. Public Utility Companies' shares were in fair demand but business has been restricted, due to scarcity of sellers. Bengal Telephone (Ordy.) were marked at Rs. 14-4, Upper Ganges Valley Electrics at Rs. 7-14 and U. P. Electrics at Re. 1-6. Sugar shares ruled easier but at the time of writing they were a shade steadier. Among others, Burma Corporation changed hands at Rs. 7-4, Frank Ross at Rs. 4-2, Hooghly Flour at Rs. 14-8, Bengal Flour Rs. 138, Indian Wood Products quoted Rs. 28 and Triton Insurance at Rs. 164-8. Britannia Biscuit improved by a rupee to Rs. 3-10.

Banks & Railways.—Imperial Banks' fully paid up issues changed hands at Rs. 1,230, while the Contributories were a shade easier at Rs. 293. Central Banks shares recorded a deal at Rs. 21-12; only a small business was reported in Railway shares. Hoshiarpur-Doab changed hands at Rs. 77 and Mymensingh-Bhairab Bazar (guaranteed) at Rs. 80.

Government Securities.—These ruled strong throughout the session, and a fairly large turnover resulted at advancing rates. 3½ per cent. Paper and 4 per cent. Ioan (1960-70), naturally monopolised the attention of the market. They were marked up a rupee higher in each case. 3½ per cent. Government Paper are now quoted at Rs. 87-4, 4 per cent loan (1960-70) at Rs. 104-13 and 5 per cent loan (1940-43) at Rs. 106-2. 5 per cent. loan (1945-55) changed hands up to Rs. 113.

The undertone was very strong at the close, with an upward tendency.

The Bank rate remained unchanged at 3½ per cent.

Teas.—This section remained featureless, with very little business passing.

JUTE.

(By our Correspondent.)

Thursday Evening.

The market has ruled dull and featureless. The fluctuations were very narrow, May futures ranging between Rs. 25-8 and Rs. 26-8.

The weather conditions have continued to remain dry for the most part of the week, the sowings in many districts being very much behind those of the previous year. The conditions, however, changed during the the middle of the week and the rains, though small, have been helpful for sowings. The sowings from many districts are reported to be less than the last season, but they are proceeding satisfactorily in the bigger districts like Mymensingh, Rajshahi, Chandpur etc. There has been very little business done either by shippers or the mills. Sellers were also scarce and reserved. Those who are holding the stocks wish to watch the progress of sowing and prospect of new crop. The quotations at the time of writing are:—

	£	s.	d.
Ready First London	14	12	6
,, Lightnings London	14	2	6
	Rs.	AS	P.
,, First Calcutta	25	0	0
,, Lightnings Calcutta	23	8	0
Futures May	26	4	0
Indian Jat LR	4	4	0
,, "XLR	3	12	0

London.—The market in London during the mail week was firm. Bears on Calcutta advices deemed it advisable to narrow their commitments. The sellers were not prepared to lose the opportunity and naturally took a firmer stand. After the covering was over the market could not maintain the level and a setback in prices took place. So far as the demand from spinners was concerned, France, Italy, and Czechoslovakia did a fair amount of business. The conditions in Germany, however, were very quiet, and buyers were reluctant to operate. The closing tendency of the market was, however, firm.

The following table shows that during the eleven months, April to February, when compared with the previous period there has been a drop in the exports of jute to United Kingdom, Germany, Belgium, Italy, Egypt and U. S. A.; on the contrary, France, Spain, Japan, Australia have taken more.

Export of raw jute (in tons) from India during the eleven months, April to February, 1932-33 and the corresponding periods of 1931-32 and 1930-31:

(In Tons).

(By Our Correspondent).

Calcutta, Thursday Evening.

The market has remained idle throughout the week with small day to day fluctuations. The cotton market has ruled dull and easy; consequently, a sympathetic ease has prevailed in the Hessians. Demand from consuming centres continues to remain poor and no business of importance is reported done, except short and near covering.

Heavy goods have likewise ruled easy, there being a slight recovery towards the end. Hessian 40" × 8 oz is comparatively higher in price when one takes into account the low price of heavy goods, this is mostly due to the fact that mills are producing the particular size and weight with great reserve.

Shipment of hessians up to the time of writing is reported to be below 7 crores of yards which is less than the market expected. The exports being smaller than production during the month of March, the month-end stock position will reveal an increase in stocks over the previous month. During the last few months there has been a continuous, though small, increase in stock of hessians as well as heavy goods, which by itself constitutes a bear factor for the trade. The months ahead are considered dull months from the point of jute manufactures, therefore the position of the trade in the near future is far from promising, unless the general outlook undergoes a material change.

The quotations at the time of writing are:—

	Rs.	A.	P.
Hessians 40"×8 oz.	8	4	0
,, 40"×10½ oz	10	8	0
,, 50"×10 oz.	10	0	0
,, 45"×11 oz.	10	2	0
Australian Cornsacks	22	8	0
A. Twills	26	8	0
B. Twills	22	0	0
Liverpools	25	4	0
Grainsacks	52	0	0
Sugar Bags	25	0	0
Heavy Cees	21	4	0
Light Cees	21	0	0
E. Bags	17	8	0
D. W. Flour Bags	26	0	0
Salt Bags	19	2	0
Wheat	11	8	0
Woolpacks	1	1	0

Dundee.—During the mail week a better tone was noticeable in the Dundee market, when both speculators and genuine buyers showed a lively interest, and a fair amount of business was reported done. Enquires were made more freely and due to appreciation in the values of raw goods, manufacturers were able to sell for some weeks ahead. Thereafter sellers were reserved and were thinking of raising their prices. Trade in other sections, such as Linoleum hessians and odds was poor, the change in values being negligible.

COTTON.

(By our Correspondent).

Bombay. Thursday Morning.

There has been very little change in the cotton market either in Bombay or in Liverpool or New York. The rise in price that took place after the banking holidays in U. S. A., could not be maintained and the pre-holiday levels have been reached all over. There was slightly better trade enquiry but the demand was fully met by the long and tired bulls who were waiting for a long time. Liquidation has been free and full; this therefore is a bull factor. Buyers are inclined to consider these levels the best for short purchases. It can therefore be assumed that a fresh break in cotton prices is not a near contingency. Taking into consideration the relative supply of American and Indian cotton the latter would be a good purchase.

According to the weekly American cotton statistics for the week ending March 20, exports to Great Britain totalled 17,000 bales against 10,000 bales in the previous week while those to Japan totalled 29,000 bales against 14,000 during the previous week. The American mill consumption has, however, fallen by 3,000 bales to 67,000 bales. The total number of bales taken by the world's mills amounted to 176,000 against 191,000 bales.

The United States Bureau in its final ginning report places the American cotton crop of 1932 at 12,703 thousand bales. The crop position for the previous five years was:

	In thousand bales.
1927	12,783
1928	14,296
1929	14,544
1930	13,754
1931	16,596

The position of Indian cotton for the period September 1, to March 23, was:—

	Bales.
Receipts	1,394,114
Exports	8,79,522

The stocks with Bombay mills and dealers are estimated at 731 thousand bales against 603 thousand bales at the same time last year. The estimated mill consumption in Bombay is 386 thousand bales against 457 thousand bales, during the same period last year. The consumption of Indian cotton in India including states, during the six months, September to February, is estimated at 1,226,000 bales in 1932-33 against 1,191,000 bales during the same period in 1931-32.

SUGAR.

(By our Correspondent).

Thursday Evening.

There is no material change to report during the week. Values have been a shade steadier mainly on account of the low stocks of Java sugar. It is, however, believed that after the season of Indian sugar is over, some appreciation in the price of sugar, particularly Java, might take place.

The quotations at the time of writing are:—

Java Sugar Ready	... Rs.	10-6-0 per md.
Java Sugar Afloat	... ,,	10-5-6 ,, ,,
Cawnpore Ready	... ,,	10-0-0 ,, ,,

Stocks in Calcutta godowns are again down, being estimated at about 2,000 tons while the stocks at the main Indian ports in bags, (ten bags being equal to 1 ton) are:—

	1933.	1932.
Calcutta ...	22,160	68,500
Bombay ...	40,000	238,000
Karachi ...	49,000	205,000
Madras ...	13,000	62,000
Rangoon ...	12,540	23,180

London futures market has ruled quiet but steady, values having declined from 5s. 9½d. to 5s. 9d.

New York.—Like London, New York Terminal market has also declined from 1.09 cents to 0.95 cents per lb.

World Consumption.—Consumption of sugar during 1932-33 is believed to be 26.5 million tons against an estimated production of 26.4 million tons. It thus turns out that the reduction in production has come to a level where is just meets the world requirement. The stock position at the moment therefore remains unaffected.

Indian markets.—Bombay and Karachi markets continue to be more optimistic so far as sugar is concerned. It is because of the fact that they are served less by Indian manufactures, and are governed by the consideration of the position in Java. As opposed to Bombay, Delhi and the Punjab markets continue to remain very dull, the demand being readily and fully met by the Indian factories.

WHEAT.

(By Our Correspondent.)

Calcutta, Thursday Evening.

The market during the period under review has ruled quiet but steady without much change in values. The new crop is being moved and the hedge sales consequently are

BOMBAY LIFE
LIBERAL BONUSES
ASSURANCE
ABSOLUTE SECURITY
COMPANY LTD
1933-VALUATION
BOMBAY
AND
JUBILEE YEAR

plentiful. The demand for flour is very poor, consequently the price for spot wheat is fairly low. This has checked fresh business in Australian wheat and should be considered a healthy factor for Indian wheat. h

The quotations at the time of writing are:

		Rs. A. P.
Punjab and Cawnpore Ready	...	3 12 0 per md.
Beta, May ...	...	3 5 6 ,, ,,
Beta, September ...	...	3 7 6 ,, ,,

London.—During the mail week the firmer tendency of wheat has been maintained. There was, however, no expansion in buying. Continental buying has been very small. The world shipment of wheat during the current season up to the middle of March amounted to 50 million bushels against 61 million bushels during the same period last year. The Flour market has ruled comparatively easier the volume of shipments being less than the previous weeks. Values are, however, well maintained. The visible supply of Canada stands at 94 million bushels against 75 million bushels a year ago.

PIECEGOODS.

(By Our Correspondent).

Calcutta, Thursday Evening.

There is not much change to report during the week under review. The demand from consuming centres continues dull and the trade interest is consequently poor. As the Bengali New Year is aproaching most of the merchants are busy squaring up the accounts. Fresh business is, therefore, naturally postponed at the moment.

The important feature of the week is the fresh business negotiated in Japanese artificial silk and mixed goods. Since the enhancement in the imports duty on artificial mixtures fresh business was at a standstill. Dealers were not willing to pay higher prices and manufacturers were not reducing their limits. Recently, however, 15 to 20 per cent. reduction in prices has been effected by the manufacturers, consequently fresh business has been placed. The retail price, thus, will not be much higher than those rulling before the import duty was increased.

There has been a considerable increase in the imports of artificial silk during recent years. The imports during the eleven months were:

(In thousands of yards).

Cotton and Artificial Silk—	1930-31.	1931-32.	1932-33.
United Kingdom ...	559	1,054	2,944
Italy	1,619	4,625	4,186
Japan	733	1,146	2,639
Total all countries ...	3,816	9,576	11,574
Artificial Silk—			
United Kingdom ...	80	397	407
Italy	91	331	122
Japan	17,083	67,259	103,653
Total all countries ...	17,558	68,315	104,728

The increase in the quantity of artificial silk imports has been from 68 million yards in 1931-32 to 104 million yards in 1932-33, or roughly 50 per cent., the increase in values is from Rs. 195 lakhs to Rs. 235 lakhs or about 18 per cent. only.

In woollen piecegoods, Japan has taken great strides and has come to have an increasing share of imports. The prices at which woollen shawls and serges were offered during the last cold weather was simply surprising. Merchants are already busy placing fresh business in this line for the coming season, and it is expected that larger business is assured from many houses who imported during the past two seasons.

The imports of woollen piecegoods during the eleven months, April to February was:—

(In thousands of yards).

	1930-31.	1931-32.	1932-33.
United Kingdom ...	1,949	1,213	2,624
France	2,008	1,884	4,558
Italy	2,012	1,336	3,952
Japan	567	115	1,399
Total all countries ...	7,552	5,201	13,708

COAL.

(By Our Correspondent).

Calcutta, Thursday Evening.

Extremely dull conditions have prevailed in the market during the week under review, prices on the whole being lower. Competition is very keen and sellers are eager for whatever small business comes in their way.

The quotations are:—

Deshergurh ...	Rs.	3-12 per ton
Super-selected Jherria ...	,,	3-12 ,, ,,
Selected Jherrias ...	,,	3-8 ,, ,,
Other Jherrias ...	,,	2-4 to Rs. 3-0 per ton
Raneegunge ...	,,	4-0 per ton
Victoria ...	,,	2-4 to Rs. 2-12 per ton

TEA.

(By Our Correspondent).

Calcutta, Thursday Evening.

Threre was no sale in Calcutta during the week under review.

At the London auctions held on Monday last 28,000 packages of Indian tea were offered for sale. There was a good demand for better sorts, medium qualities, however, were very irregular.

The following were the prices of the day:

	Last auction	To-day's auction
Common Pekoe	7¼d.	7½d.
Common Broken Pekoe ...	7¼d.	7¼d.
Common Orange Pekoe ...	7½d.	7½d.
Common Broken Orange Pekoe ...	7¾d.	7¾d.
The following are the value prices:—		
Clean Common Pekoe ...	7⅝d.	7⅝d.
Clean Common Broken Pekoe ...	7⅞d.	7⅞d.
Clean Common Orange Pekoe ...	7⅞d.	8d.
Clean Common B. O. Pekoe ...	8⅛d.	8⅛d.

The important happening during the mail week was the discovery of an o cial error understating the stocks of tea in London. According to the official statement the stocks were estimated at 289 million lbs. against 316 million lbs. The mistake was discovered on March 18. Had the intrinsic strength in the market been lacking there would have been a sharp decline in the price of tea and tea shares. But, unfortunately, the case has not been so. The market has absorbed the stock without being disturbed in the least. A Socialist M.P. has asked a question in this connection in the House of Commons desiring information as to what steps the Government proposed to take to see that such mistakes do not recur.

BULLION.

(By Our Correspondent).

Thursday Evening.

Gold.—With a small decline in London—New York cross rate and steadier exchange, the local price of gold have gone up to Rs. 29-13-6. London is ruling at £60-11½ against lower levels last week. The arrival of distress gold has once again increased, simultaneously with the increase in exports. Stocks are, however, more by half a lakh to 3½ lakhs of tolas, daily offtake continuing as usual. The shipment per S. S. "Kaisir-i-Hind" has amounted to just about Rs. 1 crore.

Silver.—Narrow fluctuations were the characteristic of the week. The consideration of the Pittman Silver proposal having been postponed till the World Economic Conference meet, the interest that was displayed by the dealers and the speculators in India and China is withdrawn. London market was confined within 17½ and and 17 11/16d. While the local market fluctuated between Rs. 55 and Rs. 56-4. The stocks are reduced to 4,500 bars in Bombay and 1,000 bars in Calcutta with a daily offtake of about 45 bars at the two places taken together.

(Continued from page 542)

received and alloted approximately 25 per cent. The market was not prepared for the Government going below 1s. 6 3/32d. This was an unpleasant shock and resulted in there being a setback in the Rupee-rate. But after the first shock was over, a steadier feeling has been gaining ground.

The closing rates were: 1s. 6 1/32d., May T. T.; 1s. 6d., June-October T. T. and 1s. 5 31/32d., November-December T. T.

Bills may be quoted: 1s. 6 1/8d., June; 1s. 6 3/32d., July to November; and 1s. 6 3/32d., and 1s. 6 1/16d., combined for December.

Money has been keenly bid for, with the rate for interbank call money touching 2½ per cent. at one time. One month, two months, and three months deposits may be quoted 1, 1 and 1¼ per cent. respectively.

(Continued from page 565)

Paper, is the biggest advance in self-government consistent with safety may answer the needs of British diplomacy but would hardly carry conviction to the Indian intelligentsia.

There is, however, one consolation in the recent debate of the House of Commons. The debate, which was intended to reveal the strength of die-hard opposition, also furnished an opportunity for Labour to state the Left wing attitude towards the proposals of the White Paper. The statement made on behalf of the Labour opposition is a refreshing reminder that the Government have not the support of the entire House of Commons in their present policy, though in India such a feeling would be tempered by the recollection of repressive measures in a Labour regime. The Labour Party has made it clear that in agreeing to be represented in the Joint Select Committee, it does not commit itself to any acceptance of the proposals of the White Paper. It would assist in the task of examining the proposals but without prejudice to its contention that the repeated pledges of self-government made to India should be fully implemented and that there can be no true consultation of Indian opinion, so long as the Congressmen are not released from jail. The practical value of the opinions of the Labour Party may not be much. It may also be that with a return to power, Labour might again show some leanings to the Right. But the significance of an opposition party refusing to commit itself to the support of the White Paper cannot be under-rated. It encourages the hope that if even at this late stage, the Indians co-operating with the Joint Select Committee would interpret the feelings of the country aright, the formulation of more liberal proposals is not quite outside the bounds of practical politics.

(Continued from page 578)

Extracts from Directors' Report:

Report for 1932.

Despite hail damage and a more severe drought at the commencement of the season than that experienced in 1931, the outturn was 8,645 maunds 37 seers against an estimate of 8,500 maunds and a crop of 7,477 maunds 26½ seers in the previous year. The loss of crop through hail was assessed at an average of 7,233 lb. of tea and Rs. 3,545-10-10 was recovered under insurance. Crop Sales realised Rs. 1,92,513-12-11 equivalent to a net average of 4.45 annas per lb. compared with 5.72 annas in 1931. A useful standard of quality was maintained throughout the season and the depressed state of the Tea Market was entirely responsible for the low average.

Comparative figures of expenditure are given below:— Estimated Rs. 2,13,840, Actual Rs. 2,00,434-8-7.

There is a deficit of Rs. 4,194-14-10 transferred from Revenue Account to the Profit and Loss Account.

After adjustments there is a loss of Rs. 8,437-11-3 for the year, leaving a net deficit on Profit and Loss Account, of Rs. 2,200-0-1 to be carried forward.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

NEARER CONVERSION.

Examining, in last week's issue, the current financial position in relation to any likely conversion operations in the near future, we came to the conclusion that the stage was set for the next phase of the conversion plan; that there would be no need for a cash loan in 1933-34; that the option of conversion should be offered in terms of both a long-term issue and a loan of medium maturity, the assentor having the right to choose whichever alternative suited him best; and that the long-dated issue should be a 4 per cent. 1960-70 loan at Rs. 99 or par, and the short-dated issue, a 3½ per cent. 10—15 year loan at one discount or par. In the same number of *Indian Finance,* we also pointed out that the sensational rise in government securities might well force the hands of the Treasury in the matter of an early announcement of its conversion plan. The following Notification appearing in the Gazette of India Extraordinary dated March 30, shows that the hands of the Finance Member have been forced to even earlier action than we anticipated:

> "Under the terms of the Government of India Finance Department Notification No. 901-F dated June 8, 1916, the Governor-General-in-Council has the right to redeem the whole of the 4 per cent. Conversion Loan of 1916-17 or any part of it at par on or after October 1, 1931, on giving not less than three calendar months' notice in the Gazette of India. It is accordingly notified that the whole of the 4 per cent. Conversion Loan of 1916-17 is to be repaid at par on July 1, 1933, with all interest due up to date. The interest will not accrue on the loan from and after July 1 .

* * *

The significance of this move on the part of the Government is firstly, that the Finance Member believes in being able to launch his next instalment of conversion on a yield basis lower than 4 per cent.; secondly, that in the next programme of conversion, holders of 4 per cent. 1931-36 loan would also be given the option; and thirdly that to the extent that any portion thereof remains unconverted, a cash loan might be necessary. Considering that those who did not avail themselves of the conversion offer in August, 1931, and February, 1932, have learnt a painful lesson by their reluctance in this behalf resulting in heavy losses, it may be taken as certain that the holders of 4 per cent. 1931-36 loan would show far greater alacrity in taking advantage of such offer as is made to them in the present conditions. We are, therefore, led to infer, from this point of view, that not much cash would be required towards meeting the commitments to those investors who do not exercise the option to convert. This means that though there may be, perhaps, a need for a small cash loan, it is quite possible that due to the larger realisations in postal savings bank and cash certificates and due to a revised policy to refrain from reducing the floating debt, the Government would find themselves able to cope with the situation without recourse to a cash loan. It may, however, also be that the proposal takes the form of a cash *cum* conversion loan, the list to be closed as soon as certain specified results are reached. But looking at this matter in reference to the effect of the loan operations on the future of giltedge, it may be safely said that whether the next plan of conversion contains an element of cash loan or not, the net result is that no new money would be required by the Government. In other words, whether we have only a pure conversion loan or a major conversion loan with an offer of a small cash loan, the effect on the market must be distinctly bullish.

* * *

A bullish view of this kind is amply justified by events in the giltedge market in the current week. Just a week ago, 3½ per cent. Rupee Paper was quoting Rs. 86; and 4 per cent 1960-70, Rs. 98. In this week, there has been a hectic rise in both. 3½ per cent. Rupee Paper, after shooting up to Rs. 89-8, has slightly reacted to Rs. 88-11; and 4 per cent. 1960-70, after touching Rs. 100-12, is quoting, at the time of writing, Rs. 100-3. In our last week's discussion of the prospects of the conversion loan, we suggested that the 4 per cent. 1960-70 conversion loan should be offered at Rs. 99 or par. This week's developments necessitate a revision of our ideas of the issue price. So stratling is the revision, indeed, that the Government have themselves given a clear indication to the market that their next borrowing rate would be certainly less than 4 per cent. From the present temper and sentiment in the giltedge market, it is possible to say that the conversion issues now to be offered should be a 4 per cent. 1960-70 at a premium of Re. 1 or Rs. 2, and a 3½ per cent. medium loan at par. We wonder whether it is our last week's suggestion of a 3½ per cent. 10-15 year loan at Rs. 99 or par, which is responsible for the sensational rise which has taken place in the last three or four days. Be this as it may, it is certain that the market is not expecting anything more than a 3½ per cent. return on a loan of medium maturity. If the Government, for any reason whatsoever, offer an yield higher than 3½ per cent. on such an issue, they would be making their borrowing dearer than need be the case; at the same time, they would be administering a setback to the advance that has taken place on all fronts in the giltedge market.

* * *

Never has there been such a complete assertion of bullish sentiment in the giltedge market as we have witnessed in this week. Bulls have made good profit; those who assented to conversion last February have had an appreciation in their securities far more than they could have expected in their most sanguine moments. Bears have been entirely routed. As a matter of fact, the major cause in the sharp rise was the technical position of the market and the frantic attempts of bears to cover their sales. So complete is the discomfiture of those who had oversold, that for many a long day, bearish tactics would continue to be in popular disfavour. Viewing the policy of open market purchases, actively sponsored by the Government, and aptly supported by the Imperial Bank in the last quarter of 1932-33, two remarkable conclusions emerge. First is that intelligent and adequate purchase of securities is an infallible aid to the success of any new loan programme. The second is that the authorities have meted out a most drastic punishment to those who dared to challenge the capacity of the Treasury and the Bank to lend the fullest possible support to the securities market. The vindication of the wisdom and triumph of the policy of open market purchases is no small achievement. But even far greater is the retribution meted out to bears who, till a few months ago, had played havoc in the giltedge market.

* * *

It will be remembered that on the advent of the boom in rupee giltedge securities, following the

announcement of the British Treasury's plans of conversion in respect of the 5 per cent. 1929-47 War loan, *Indian Finance* pointed out, repeatedly, the glaring disparity between India sterling stocks and India rupee stocks; we emphasised, again and again, that this disparity is too unnatural to last; we predicted that in the course of a few months, such disparity should disappear. It is only in the current week,—and it is nearly nine months after we wrote in this strain,—that the disparity between India rupee securities and India sterling securities has finally been wiped out. 3½ per cent. India sterling paper was quoting on Thursday £87¾; and 3½ per cent. Rupee Paper was quoting Rs. 87-10. That is, March 30, 1933, saw the parity established between the two corresponding scrips, namely, 3½ per cent. sterling paper and 3½ per cent. Rupee Paper. On Friday, however, 3½ per cent. Rupee Paper has taken a leap forward and is actually ahead by nearly 1½ points.

* * *

As a result of this closer approximation between the prices of India sterling stocks and rupee stocks, the finishing touch has been, so to say, given to the plan for the revival of the fullest confidence in giltedge securities on the part of investment institutions like insurance offices. Owing to the serious and numerous embarassments with which Indian insurance companies came to be confronted in the latter half of 1931 on account of the disastrous fall in the prices of their giltedge holdings, these concerns had come to show marked reluctance towards long-term securities of the Government; in fact, investment in Treasury Bills were in great vogue even with institutions with whom liquidity of funds is no necessity at all. Now, on the one hand, the yield on Treasury Bills has sunk to so low a level as 1¼ per cent.; on the other, experience of the past eighteen months has been altogether happy so far as long-term securities are concerned. We may, therefore, conclude that insurance offices will not be taking further or great interest in Treasury Bills; and that they would be investing on a larger scale and with a greater confidence in long-term scrips. Let it not be forgotten that a very cautious policy was being pursued in this regard by insurance companies for nearly two years. There is, therefore, the possibility of the investment of all current accretions to the funds of insurance companies; what is even more important is that a good part of the extremely short-dated investments made in the past two years would also now be changed into long-term stocks. We should, accordingly, think that considerable support will be derived by the giltedge market from investment institutions.

* * *

So far as we can see ahead, there need be no new loan, for a year or two, issued for the purpose of raising new money from the market. Whatever loans are issued in the following twelve months or so would be purely for conversion purposes. This means that such surplus funds as accumulate amongst institutions and individuals who have, for some reason or other, a preference only for trustee stocks, can have no scope for investment in any fresh issues of Rupee Loans. Owners of such surplus funds will have to seek investment only from among existing securities. This in itself constitutes a most powerful factor in the giltedge situation.

* * *

At the present moment, many are inclined to consider that the rise in giltedge has been overdone. They look forward to an inevitable reaction. We may readily admit that there may be, in fact, there should be, occasional reactions due to profit-taking. But such reactions as occur for this reason would only have the effect of consolidating the advance in giltedge in stage after stage. When we view this matter from the standpoint of the ways and means position, present and prospective, of the Treasury; of the total absence of any major loan operation in the Indian capital market once the loans maturing in 1934 and 1935 have been dealt with; and of the annual accumulation of funds that must seek an outlay in giltedge and only in giltedge, we have no reason to suppose that giltedge prices to-day are unduly high. On the other hand, we look forward to further notable gains as soon as the conversion programme has been fulfilled in its entirety. 3½ per cent. British War Loan is quoting Rs. 101. We do not see any reason why 3½ per cent. India sterling stock and 3½ per cent. India Rupee Paper should be quoting less than 95 as soon as India's financial position has been placed on a most secure footing by the anticipation, in the next conversion plan, of the loan requirements of the next two years.

A NEW PROGRAMME BY MR. J. M. KEYNES.

In a series of four articles in *The Times*, Mr. J. M. Keynes has propounded a programme of what may be called "controlled international inflation." In his opinion, there is no other way to recovery, and he appeals to the world to act upon his programme or challenges, in the alternative, to disprove its efficacy.

* * *

The main points in Mr. Keynes' programme can be summed up thus. If there is to be recovery, prices must be raised. They can be raised only if there is a large expansion of credit. But utilisation of credit on any considerable scale, is more likely to follow recovery than precede it. So long as the anxiety about the stability of currencies prevails, neither Governments nor central banks will embark on any large scale international lending. Some means of increasing the reserves of international

ORIENTAL GOVERNMENT SECURITY

LIFE ASSURANCE CO., LTD.

INCORPORATED IN INDIA 1874.

HEAD OFFICE: BOMBAY.

1931 RESULTS

New Business: 26,486 Policies assuring Rs. 535 Lakhs.
Net Interest Income: Rs. 57 Lakhs.
Total Premium Income: Rs. 187 Lakhs.
Claims Paid: 3,877 for Rs. 86 Lakhs
Loans to Policyholders: 11,130 for Rs. 44 Lakhs.
Funds Increased to nearly Rs. 11½ Crores.
Policies in Force: 1,90,713 assuring with Bonuses: Rs. 41 Crores.

All the operations involved in the above conducted at the low expenses ratio of 21·4% of the premium income.

money, from out of which lending on a grand scale can ensue, must hence be found by artificial expedients. Gold is, of course, the only acceptable form of international money, but the supply of gold is limited, and its distribution lies beyond the possibility of any immediate readjustment by agreement. Mr. Keynes suggests an international issue of gold notes through some central organisation to be specially created for the purpose. The participating countries, acting together, would guarantee the scheme against losses, should they exceed the margin of the interest charged on the advances. When the scheme has served its purpose, and the international price level rises to that of the period before the slump, the issuing authority could call in the notes advanced by it. As a condition of participation, every country should remove such tariffs and quotas and exchange restrictions as have been brought into vogue to protect its trade balance. To check undue short time money movements from country to country, there is to be a margin of 5 per cent. between the buying and selling prices of gold, and in cases of emergency, the parity figures themselves must be liable to adjustments, within limits.

* * *

Under this scheme, a total issue of 5 billion dollars is to be made by the international authority, and rendered available up to a specified maximum to each participating country against its bonds, the international notes being acceptable, under legislation, as the equivalent of gold for central bank reserves. The following maximum quotas for each country are tentatively fixed in the scheme in the first instance. Great Britain, the United States, France and Germany are to have a quota of $450,000,000 each; Holland $175,000,000; Sweden $63,000,000; Norway $39,000,000; Austria $24,000,000; Greece and Chile $7,000,000 each; Roumania $30,000,000; Peru $20,000,000; and so on.

* * *

Notwithstanding the ambitiousness of the scheme, Mr. Keynes is fully confident of its immediate feasibility. "Gold," he says, "has received such a gruelling that conditions might now be laid down for its management which would not have been acceptable otherwise."

* * *

Mr. Keynes' programme has had a mixed reception. *The Economist* welcomes it as a "legitimate plan for meeting the situation by positive action—whereas the only other proposition in the field is to adopt a policy of cheap money in countries where this is possible, and to hope for the best." At any rate, it is recognised that the scheme "at least meets one great immediate difficulty of financial recuperation which would otherwise be a great stumbling block, namely, that a general policy of credit expansion, without which prices cannot rise, requires a normal distribution of gold; and for this to occur through ordinary processes of trade or through normal lending may take years."

* * *

On the other hand, Mr. O. R. Hobson, writing in the *Financial News*, dismisses the proposals as amounting to "a grand piece of international humbug." "There may be" be observes, "something in mass-produced Coueism—but who is going to trust Austria with $24,000,000 against her gold notes of hand alone, or Greece or Chile with $7,000,000, or Roumania with $30,000,000, or Peru with $20,000,000? Heaven help the British Government which tries to get such a scheme through Parliament!"

* * *

When one recollects the fate of the League Loans, Mr. Hobson's criticism does not appear to be either unreasonable or out of place. Of the aggregate of £80,000,000 raised for the rehabilitation of the smaller European countries economically raised by the War under the guarantee of the League of Nations, default in payment has arisen in respect of all but £5,000,000. Mr. Keynes' programme is essentially an extension, over a wider sphere, of the expedient embodied in the flotation of the League Loans. Might it not be that the present plight of the League Loans provides an apt comment on the potentiality of Mr. Keynes' programme?

* * *

On the basis of his scheme of "controlled international inflation," Mr. Keynes would have the British Government undertake an immediate increase in public loan expenditure as the first step in a policy of raising prices. Public loan expenditure inevitably suggests, as the *Economist* points out, the "hanging of a still lager mill-stone round the neck of the heavily burdened taxpayer"; but Mr. Keynes contends that if £200,000,000 worth of profitable and productive work is put through with public money *now*, when money is cheap and labour plentiful, the repercussions set up thereby in the shape of reduced expenditure on unemployment and increased taxation returns on income, would cover a substantial part of the burdens incurred in the shape of debt. It cannot be denied that the present is a favourable time for embarking on works that are necessary or desirable in themselves; but has not Mr. Keynes over-estimated the capacity of public works to promote recovery? The following comment of the *Financial News* sums up the general impression left by Mr. Keynes' proposals:

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

OVER 86 YEARS' SERVICE IN INDIA

The STANDARD LIFE ASSURANCE COMPANY

ESTABLISHED 1825

"Public works, as experience has proved over and over again, do not work any miracles in the industrial field when the trend of the trade tide is against them. And the cost is heavy. They have certainly no innate virtues such as would justify the perpetuation of clever freak tricks with the Budget, such as segregating at the same time the far bigger item of "capital nature" receipts in the shape of the death duties. If we want to encourage living on capital for a time, it should be done honestly; for under any programme of uneconomic public works, that part of the 'repercussions' represented by increased imports will see to it that we do."

ZENITH LIFE ASSURANCE CO., LTD.

The strongest point about the Zenith Life Assurance Company is its rigorous adherence to a rigorous and puritanic policy as regards investments ; and this very strength became the cause of serious embarrassment, by virtue of the coincidence of the date of the last valuation with the darkest phase in rupee and sterling giltedged securities. At the very outset, it may be stated that since the date of valuation, there has been such remarkable recovery in the price of government securities, that simultaneously with the Actuarial Report, the Directors could also issue a report that the position as on the current date presents a most welcome surprise in contrast to the position that was studied by the Actuary. In this connection, it will be remembered, that, because of the very abnormality of the conditions prevalent in giltedged market at the end of 1931, the Zenith, in company with other indigenous insurance offices, applied to the Government Actuary to allow a certain elasticity in the interpretation of the statutory obligations as regards actuarial investigation of Indian companies. Red tapism refused to budge an inch. It declared that the letter of the law must be strictly observed. The result is that we have the curious, but not unexpected, phenomenon of an Actuarial report needing revision ere yet it reaches the hands of shareholders and policy-holders. We understand that the Zenith is proposing to have a valuation made as at December 31, 1932. This is a wise decision. Anything less than this would have been unfair to policyholders. Anything other than this would have been equally unfair to the management, who have had to cut a poor figure just because their investment policy has been the first and last word in integrity.

* * *

The valuation has disclosed a surplus of Rs. 18,177-7-9. The rate of mortality that has been assumed, is that of the H. M.-table with an addition of 6 and 5 years for whole life and other classes of policies respectively to allow for the heavier mortality in India. The average rate of interest earned during the five-year period of 1927-31 was 5.6 per cent., while the rate assumed for valuation is 5 per cent. Taking into consideration the fact that the average rate of interest has gone down since the date of the valuation—the appreciation in giltedge having had the counter-effect of lowering the yield on the investments—the rate assumed by the Actuary provides a fair margin for contingencies. Provision for expenses in the valuation has been made at the rate of 20 per cent., the actual renewal ratio experienced by the company being 19½ per cent. It may also be noted here that the ratio was 18.75 in 1931 as against 19.63 in 1930, and is expected to go down still further.

* * *

The consulting Actuary has recommended that, in view of the fact that credit was taken for the Investment Reserve Fund in the valuation balance-sheet, and that provision for depreciation of securities as at December 31, 1931 had not been made in the way required by the regulations of Government for the distribution of a surplus, the surplus disclosed by the valustion should be carried forward undivided.

The Zenith has made progress in the period covered by the valuation, as is evident from the report of the Directors, accompanied by figures relating to the three quinquennial periods which the company completed on December 31, 1931. The following figures indicate the progress achieved by the company :—

Period	Sums Assured	Premium Income	Interest	Expense Ratio to Income
1916-21 ...	15,49,290	2,37,357	14,949	62%
1922-26 ...	32,02,497	6,28,871	55,741	48%
1927-31 ...	76,07,342	16,46,365	1,45,614	43%

In spite of the progress of the company, it has not been found expedient to declare bonuses or dividends. The following words of the Actuary, however, ought to show that this is purely a temporary phase :

"You have had the misfortune of having the valuation fall due as at a date which was the worst in the economic history of India; and so the result is somewhat disappointing. It should not, however, be discouraging, as there is nothing intrinsically unsound so far as the position of your Company is concerned, and with your management in efficient hands the evil effects of working with very low rates of premium which were in your prospectuses for the first nine years, and which are still payable under a fairly good number of policies submitted for valuation, will very soon wear off, and the advantages of increased rates of premium will begin to be felt. You can also get the advantage of the appreciation in the values of securities which has occured subsequently to the date of the valuation, and it is quite likely that the condition of your company will show much better results within a very short period.

GOLD PLAYS HIDE AND SEEK.

The extent to which the abandonment of gold standard by Great Britain has affected the supply of gold is clearly brought out by the statistics now available of the production and distribution of gold in the year 1932. Till two years ago, the view generally held was that the production of new gold would steadily decline and the addition to the world's monetary reserves would fall short of the rate of growth necessary to maintain a steady level

BOMBAY TELEPHONE COMPANY, LTD.

NOTICE

NOTICE is hereby given that at the 11th Ordinary General Meeting of the Company held on the 27th March, 1933 a Final Dividend of Rs. 2 per share equal to 4 per cent. free of Income-Tax for the year ended 31st December, 1932 was declared payable on all issued shares of the Company to shareholders appearing on the Register as on the 27th day of March, 1933, and that such dividend will be paid by warrant posted to such shareholders on the 28th day of March, 1933.

R. H. PARKER,
General Manager & Secretary.

Bombay, 27th March, 1933.

of prices and that in consequence very great economy in the use of gold should be exercised if it is to continue to act as a universal currency standard. The expectations of a recurring shortage in the supply of gold have now been belied by the response of production to the higher prices of gold in terms of most currencies.

* * *

The world production during 1932 amounted to £100.1 million, of which the British Empire contributed 71.6 million or 70.5 per cent. South Africa was the largest producer with 49.1 million. The corresponding world figures for 1931, 1930 and 1929 were 94.3 million, 85.5 million and 82.8 million respectively. Prof. Gustav Cassel assumes a rate of increase of 2.8 per cent. of the aggregate gold production as being required by the economic development of the world. Actually, however, between the years 1923 and 1929, the rate of increase was annually about 1½ per cent. per annum. But in the three following years, 1930, 1931 and 1932, the growth of production increased to 7, 7 and 8 per cent. respectively. South Africa is now off the gold standard, and the producers there are now assured of a currency premium of no less than 30 per cent. on their output. Gold mining activity has, therefore, increased in South Africa, and it is highly probable that 1933 will show a very much larger increase in the gold output and the record established this year will certainly be eclipsed.

* * *

Apart from an increase in the output of the mines, the release of gold from Indian hoards and distress offering assumed very important dimensions and amounted in 1932 to £36 million or 35 per cent. of the world's new production. A further amount estimated at about 14 million was made available at the open market by the gold rush in England. The total visible supplies of gold in 1932 amounted to £151 million.

* * *

Not all this gold was added to the monetary stocks. According to the figures published in the Annual Bullion Letter of Messrs. Samuel Montagu & Co., the gold reserves of the Central Banks and Treasuries of the various countries of the world amounted to £2,443 million as compared to £2,328 million at the end of 1931. The addition to the monetary reserves is thus only £114 million. The difference of 37 million is accounted for principally by hoarding in western countries, notably in France and America. The extent of this hoarding is brought out still more strikingly, if a comparison is made of the figures of 1930. The comparison reveals that the actual increase of the world's monetary stocks during the two years 1931 and 1932 was £216 million, although the world production in the two years amounted to £196 million and the release of Indian gold alone amounted to £55 million. It is estimated that during these two years nearly £100 million was hoarded in the two countries alone. We have thus the striking phenomenon of the Indian masses, who had traditional partiality for hoarding gold, fresly drawing on their reserves during the time of depression, when highly civilised western countries with well-established monetary systems resorted to hoarding on a large scale. The drastic action recently taken under the new Bank Act in the United States has however had the effect of drawing out part of the gold hoarded during the last two years in that country.

* * *

Thus the international gold problem has not only eluded the plans of economists and statesmen but has even played cruel pranks with them during recent years. The Genoa Conference claimed to foresee a period of continuous decline in the production of gold and the consequent uninterrupted fall in the world prices. Armed with prescience, they thought that the dire consequences of falling prices could be avoided if the nations would agree to exercise the utmost economy in the monetary use of gold and establish the gold exchange standard. The new device has well-nigh proved the undoing of the world's currencies. Much of the travails of London and New York during recent years could be attributed to the maintenance of a large volume of foreign balances, which in their movements ruined alike the country which they deserted and the country to which they flew. In the place of an actual shortage there came a mere mal-adjustment whose causes lie embedded in numerous political settlements amongst the majority of nations of the world. In the end, we see that far from gold production showing any decrease, it has actually expanded during the years following the enquiry of the Gold Delegation of the League of Nations. With the record of calculations so consistently awry, faith in the capacity of any generation to provide against upsets in the economic and monetary world must inevitably be on the wane. More gold instead of less, European and American, instead of Indian, hoarding, falling prices, due not to reduced gold stocks but to maldistribution, these are the experiences of the world in regard to gold and the monetary uses thereof. If they point to anything, it is the futility of making monetary programmes without the assurance of goodwill and co-operation among the nations.

JUTE—POSITION AND PROSPECTS.

Our Commercial Correspondent writes:—

According to the figures published by the Director of Commercial Intelligence, the total arrivals of jute into Calcutta from July 1, 1932 to March 25, 1933, were 67,57,000 bales. The Director of Agriculture in his forecast issued in September last

STATEMENT FOR 1932.

TOTAL ASSURANCES IN FORCE, December 31, 1932	Rs. 8,02,45,26,118
This large amount, the accumulating estates of nearly a million Sun Life policyholders, will become payable to them or their dependents during this generation—a stablizing factor of great social and economic value.	
NEW ASSURANCES PAID FOR	77,83,53,235
TOTAL REVENUE	43,98,38,935
TOTAL DISBURSEMENTS	39,71,54,190
PAYMENTS TO POLICYHOLDERS AND BENEFICIARIES:	
During the year 1932	29,17,83,747
Since Organization	1,94,65,36,353
ASSETS	1,67,51,67,541
Bonds: government, municipal, public utility and others; stocks: preferred and common; loans on mortgages; real estate; loans on Company policies; cash in banks, and other assets.	
LIABILITIES	1,63,62,76,495
Almost nine-tenths of this sum represents the policy reserve—the amount set aside to guarantee all policy payments as they become due.	

PAID-UP CAPITAL (Rs. 54,79,452) and balance at credit of shareholders' account	Rs.	93,59,181
RESERVE for depreciation in mortgages and real estate		1,30,99,134
SURPLUS		1,64,32,731
	Rs.	3,88,91,046

The valuation of assets has been carried out on the bases prescribed by the Insurance Department of the Dominion of Canada; also on the basis prescribed by the National Convention of Insurance Commissioners of the United States, and the Superintendents of Insurance of the Provinces of Canada.

Policy reserves have been valued by the full net level premium method, on bases more exacting than those required by the Insurance Act of the Dominion of Canada.

Rate of exchange used: 1 Rupee equals 36½ cents. (par).

Sun Life policyholders number nearly a million.

Assurances in force have increased since 1929 by Rs. 1,27,39,00,000.

Assets have increased, during the same period, by Rs. 11,84,00,000.

Applications for new assurances were received by the Company during 1932 at an average rate of more than Rs. 27,39,000 for every working day.

During 1932 the Company paid to policy-holders and beneficiaries more than Rs. 9,50,000 for every working day.

Income from renewal premiums was the largest ever received by the Company in a single year.

Cash in repayment or reduction of policy loans exceeded in amount that of any previous year.

Revivals of lapsed policies were in excess of those of any previous year, with one exception.

The net amount of policy proceeds left with the Company at interest was substantially increased.

SUN LIFE ASSURANCE COMPANY OF CANADA

CALCUTTA.

estimated the 1932-33 crop to be about 58½ lakhs of bales. The total imports into Calcutta have already exceeded that figure by more than 9 lakhs of bales. For the week ending March 25, the arrival of jute into Calcutta was 1,33,000 bales. From the rate at which jute is coming in, it seems almost certain that the total imports of jute by the end of the present season will be somewhere near 80 lakhs of bales. The export of jute up to now as compared to last year is less than half a lakh of bales. We expect that the export of jute during the present season will be about 30 to 31 lakhs of bales. This means that there will be no reduction in the stock carried by the mills, and that dealers are likely to be left with a good deal of unsold jute, unless the mills purchase more than their consumption and increase the stocks carried by them.

Immediately after the placing of an embargo on gold by the United States of America, there was some improvement in the price of jute and jute manufactures. The price of hessian which at one time dropped down to Rs. 7-10 per 100 yards improved to Rs. 8-7. On the day the news of the embargo on gold was received in India the price of jute in the futures market touched the low level of Rs. 23-14 per bale. From this level there was an improvement to Rs. 28-12. A good deal of this gain has already been lost.

The principal reason for this improvement was the feeling of optimism that swept over the American markets in anticipation of constructive action by the new Administration, to improve the economic condition in that country. In August last, the feeling of optimism originating from the stock exchange in New York spread to every other market of the world, as a result of which there was a fairly good rise in the price of all commodities. It was expected by some that there might be a repetition of what happened then. But the improvement in New York sentiment has proved to be of a very temporary nature. The price of leading stocks on the New York stock exchange has receded to the pre-embargo level. American gunny buyers in expectation of better business conditions in the U.S.A. are reported to have done good business with Calcutta shippers. During the last few days there has been a falling off in that demand.

Another cause of the recent steadiness was the absence of rain in the jute districts. There have been thunder storms in some places, but rain is still wanted in many districts to enable the cultivators to commence sowings. Want of rain can have only a temporary steadying effect on the market. If the rains are late by a fortnight the extent of sowings would not be affected. The crop may be late, but what does it matter when the godowns of the buyers are chokeful of jute?

Though the price of hessian has been keeping fairly seady, the market for bags is in a very depressed state. There is very little demand from Burma Manchuria and other places. April May and June are the dullest months for the export of jute bags. It is expected that there will be a substantial addition to the existing stock of bags in Calcutta, during the next three months. Lower prices for bags, therefore, are to be looked for. The unexpectedly good shipments to the Plate during January, February and March have kept the stock of hessian from increasing. It was expected that stocks of hessian during the first quarter of this year will be increased by about 4 crore yds. This has not been so owing to the cause mentioned above. So far as hessian is concerned, the position for the next six months seem to be sound.

Coming back to jute, we think that the future course of prices will depend, to a great extent, on the extent of sowing for the next crop. The experience of this season does not give us any reason to think that there will be a reduction in the size of the crop. It is said that the price of paddy is very low and, therefore, the cultivator has no alternative to producing a normal crop. If the next crop is equal to the present one, unless there is an improvement in world trade, there is no hope of any improvement in the jute trade.

DEBATE ON THE WHITE PAPER.

The British Government is doing its best to create the impression that the work of the Reforms is being carried out with the utmost possible speed. Within a fortnight of the publication of the White Paper, the House of Commons has passed the motion of Sir Samuel Hoare regarding the appointment of a Joint Select Committee to examine the White Paper and the proposals of the Government embodied therein. But at the same time, the Government are taking care to make out that in their task of endowing India with a Reformed Constitution it is not all smoothsailing for them. A three-day debate on a motion which commits Parliament to no definite policy and in a House assured of a big majority for the Government is obviously a means of magnifying the opposition of small groups. For an Indian, alive to the hard facts of politics in his country and with the knowledge that the retired Indian officials are too experienced to regard retrogression as practicable, the speeches of the diehards smacks strongly of a got-up affair. Little or no significance can attach to the comment on the White Paper that in the matter of safeguards the Government have yielded much and that for this reason, the authority of Parliament over India is set on an inclined plane. The speeches of the Government's spokesmen have tended, during recent times, to become too stereotyped to call for detailed notice in Indian newspapers. To say, as Sir Samuel Hoare did, that the White Paper is neither a white flag from the standpoint of Great Britain nor a red flag to flout Indian nationalism is to call for the obvious retort that, if Britishers interpret it aright, it is a red flag to flout Indian nationalism, and by the same token, Indians could regard it as a sign of abject surrender to die-hardism "at home". Clearly, it is not a halfway house between the two. Every demand of extreme reactionarism has been faithfully embodied in the White Paper proposals. And even the supplications of Indian moderates have been scornfully brushed aside. In these conditions to contend that the new Constitution, as formulated in the White

Christmas marks the end of the calendar year ; this week celebrates the conclusion of the fiscal year. The former is rung out in festival and feast, in frolic and fun ; the new calendar year is rung in in hope and best wishes for the best, in high resolves and grandiose plans. The financial year is a tame, prosaic, commonplace affair. Not bells nor song nor gambols —but grim determination to clear up arrears, drastic programmes to make ends meet, frenzied work and crowded hours, are the distinguishing traits of the fiscal year-end. And the new year opens with no roseate vision or alert doings to match alert resolves. One just feels that after the strain and stress of the earlier weeks, one can take things easy, stretch oneself a bit and be content with the day for the evil thereof. In the calendar year, you start at high speed ; you put forth your best in the first flush of enthusiasm ; but you slacken soon, realising disappointedly that well-begun is far from half-done or even quarter-done. The financial year sees you easy at the opening ; you gather steam as the months pass ; and you attain maximum speed towards the very finish. The fag-end of the fiscal year is, therefore, an inexactitude. Year-early fag is a truer description.

* * *

Officials in the finance departments of governments, central and provincial, heave a sigh of relief as March yields place to April. From November onwards had begun the gathering together of all preliminary data for the budgets. Important, and more or less final, plans had been settled in December. January and first half of February had been closely watched, whether or no the events in this crucial period afford ratification or necessiate reconsideration of December plans. The second half (and the less half, as it is a short month) of February had seen the Finance Members busy with their orations, making notes furtively, writing in bits, dictating mysterious and conundrum-like passages to Sphinx-like assistants, changing, rechanging, fashioning and refashioning, putting the finishing touches here or there, so that the final drafts of the budget speeches were ready hardly a couple of days before the great day of the event. The exciting day had arrived ; and sharp to the minute at the appointed hour on the appointed day, the Finance Members had risen from their seats, lustily even if only formally cheered ; delivered the addresses prepared in the very throes of pain and thought ; and sat down, vociferous cheers breaking out again. More arduous days had followed. Legislators—most of them bad, a few indifferent, and fewer good—had started, haranguing the Finance Member for all that he had done or failed to do but unable to advance one new argument or make one positive criticism beyond what Gopal Krishna Gokhale had said on budgets a generation ago.

* * *

The speeches had seemed endless ; the drone of the voices had proved soporific ; most but the speaker for the time being, had retired into the lobbies ; a chamber-wide yawn had held the remnant in its grip ; but through all this dull, stale, unprofitable performance, the Finance Members had to sit, glued to their seats, making notes of mostly nonsensical observations, with a view to offer replies which should not, however, rub the futile bores the wrong way. Well, the speeches had come to an end ; the Finance Members, with petulence well-concealed, had answered the critics, attempting a jest here and paying a conventional and undeserved compliment there. Then had started token cut motions—thrusts and counter-thrusts—division bills ringing in frequent intervals—and, in the main, motions thrown out. The finance Bill had, at long last, to be taken up—more speeches from all sides. The Bill had passed through the several readings. The Bill had become an Act. The Finance Members had woke up from their ugly nightmare. And as a perky writer affecting, however, a worn-out mannerism in a contemporary, would say, this month of March endeth ; the old financial year endeth ; and the new beginneth.

* * *

April is, in a supreme degree, the month of relaxation, of reprieve from work, of recuperation for tired body, of balm for frayed temper, of reinvigoration for jaded nerves. It is customary to offer the season's felicitations to mark the commencement of the calendar year. May I mark the paramount significance of the fiscal year to the business community, by offering, the Finance Members and their army of lieutenants and assistants, the best wishes that their new year would bring them no unexpected surprises or unpleasant jars ; and that after their abandon, in April, to the spirit of the Lotos-eaters, they would return to their work, to find that events at home and abroad have happened in a way that makes their future task easier, smoother and in more consonance with whatever is good to the millions in this country.

Robert Hudson (India) Ltd.

Managing Agents: **MARTIN & CO.**

12, MISSION ROW, CALCUTTA.

I have, on earlier occasions, spoken my mind on the current phase of intense activity on the part of company promoters in the field of sugar manufacturing concerns. Frankly, I do not like the look of this boom. Much less do I like the way in which the new ventures are planned, the composition of the directorate, the class and type and emoluments of managing agents, the kind of constitution which their Articles create for them. I think it is time that a grave warning is uttered lest the public should have their fingers badly burnt in this phase of frenzied finance. Sugar is sweet; but sugar finance looks like turning out bitter. No one should put out any money in concerns whose credentials do not stand the closest scrutiny and which are started on no more than the facile hope that any Tom, Dick or Harry is good enough to blossom into the managing agent of a sugar concern and that because of the high protective duties, any amount of vagaries in management would be permissible and could yet result in good earnings for the companies in question.

* * *

The routine of administration absorbs, as a rule, the whole of the attention and energy of most of our Vice-Chancellors. But Sir Hassan Suhrawardy has been able to spare care and thought for the fate of the *alumni* leaving the portals of the Calcutta University. At the Convocation last week he expounded the main elements of a scheme, to be worked out under the auspices of the University, having for its object the settlement of educated unemployed in agricultural work on hitherto unexploited land. The model on which the scheme is based is the experiment which has been worked out to such fine results by Sir Daniel Hamilton in the Sunderbans. No model could be more helpful for the aim which Sir Hassan has in view, which is apparently that of turning out from Calcutta graduates a new class of gentlemen farmer which is the backbone of the community in Europe and America, but which has not been developed yet in India. If the scheme is carried out to fruition, the credit of being the pioneer in an essential but neglected field of enterprise, would belong to the University of Calcutta and its Vice-Chancellor.

* * *

Sir Hassan is nothing if he is not a hustler. Another refreshing trait about him is that age has not damped his ardour, nor experience chilled his enthusiasm. Himself keen and alert and enterprising, he will not rest content till all in his company are infected with the same fervour and frenzy. He has ideas—he has faith—he has driving force; three qualities that insure the materialisation of his dreams.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN.

FINANCIAL RESULTS OF RAILWAYS FOR 1932.

The financial results of the four main British railways for 1932 reveal some striking developments. The net revenue for 1932 for all the four railways amounted to £26,425,000, a fall of £7,000,000 or 21 per cent., from the revenue of 1931. The Great Western alone paid a dividend of 3 per cent. on the ordinary stock, and to make this payment, had to draw on reserves to the extent of £1,100,000. The Southern, in spite of very strenuous exertions, could not pay more than 1 per cent. on the preferred ordinary stock.

Taking the whole decade into account, railway receipts declined by £50 million, but were offset by reductions in expenditure to the extent of over 35½ million. Some idea of the rigour of the economy campaign can be gathered from the achievement of the period between 1923 and 1929. During the interval, railway earnings fell by £13,000,000, but the economies effected amounted to £14,000,000, leaving a margin for a net increase of £1,000,000 in revenue in spite of the diminishing gross returns. Since 1929, however, the scope for further economies has proved to be limited, and the fall in revenue could not be overtaken by savings on wages and other expenditure.

The railway companies have embarked on a policy of drastic reduction in fares to attract more traffic; but it is doubtful if the increase in traffic resulting from the policy would prove sufficient to offset the reduction in fares, not to speak of an actual increase in revenue. The Railway Statistics issued by the Ministry of Transport show that the total number of passenger journeys taken on all standard guage railways in Great Britain in the month of December, 1932 was 95,937,894, an increase of 1 per cent. compared with December, 1931, but the receipts from passengers, in spite of their increased number, showed a decrease of £13,321, or 0.3 per cent.

Mr. Chamberlain's Lost Opportunity.

Since the conclusion of the labours of the Preparatory Commission of Experts for the World Economic Conference, Mr. Neville Chamberlain has been foremost among the band of British economists singing the beauties of world economic disarmament. He had the oportunity during the week, when Mr. Grahame White tabled a motion in the House of Commons inviting the Government to pledge themselves to a policy of all-round tariff reduction, to give a lead in accord with the fine sentiments he had often so freely given expression to. But he let the opportunity pass. The Government's attitude, which was voiced by Mr. Runciman, was one of evasion and excessive vagueness. The essence of official policy, as defined by him, consists in full support to the most-favoured-nation treatment of the tariff question, subject, however, to conditions primarily designed with the view that Great Britain should derive some substantial advantage out of it. The conditions laid down for Great Britain's entry into a low tariff group are as follows:

(1) The tariff reductions offered must be attractive; that is, the tariffs in question must have been previously very high, and the reduction promised must have the effect of bringing them down to a substantially low level.

(2) The agreement must cover an area wide enough to promise tangible results.

(3) It must not call upon Great Britain to incur sacrifices disproportionate to the benefits expected.

It is clear from these conditions that the entire tariff policy of the Government is actuated by one or other of two motives. It must either be the expression of a bargain well driven, or have a protectionist effect on revenue or industry. In either case, the ideal of "Empire Free Trade" of which so much has been made of late, stands negatived; and Great Britain's competence for giving a lead to the world in economic disarmament is rendered liable to grave question.

Agricultural Marketing Bill.

Major Elliot, Minister of Agriculture, who introduced the Agricultural Marketing Bill for second reading in the House of Commons, claimed a great many virtues on behalf of the proposed legislation. It would, he said, improve the position of English agriculture by giving a lead to farmers in adequately organising and developing industry. He also contended that through its help, wholesale prices could be raised by 20 to 30 per cent. without entailing a rise of more than 1 to 2 per cent. in retail prices.

Notwithstanding Major Elliot's claims, the powers granted in the Bill to the Minister and the President of the Board of Trade to regulate imports of agricultural products, elicited much adverse criticism which developed into an onslaught on the Ottawa agreements. The main points of criticism against the measure were that it was heavily overladen with penalties, and put tariffs and quotas first, and reorganisation afterwards, while its expectation of effecting a substantial increase in the price level was, at best, a questionable proportion. There is also a general impression among Members of Parliament that the Bill would prejudice the chances of agreement at the World Economic Conference.

UNITED STATES OF AMERICA.

COULD THE CRISIS HAVE BEEN AVOIDED.

The banking holiday is at an end, but its disastrous results on trade and business are beginning just now to appear. The moratorium reduced to a destitute condition, though temporarily, even undertakings with abundance of bank credit. A tremendous setback in business has been the result, from which time will be required for recovery, despite the reopening of the banks. The distress caused by the banking holiday was most pronounced in the interior where, on account of inability to get currency, prices fell to a phenomenal extent, and owners of goods and commodities found it hard to sell at any price.

Was all this dislocation inevitable, or was it the result of bungling? A considerable part of the banking crisis is no doubt traceable to the deficiencies of the American banking system, and the competing supremacies of a number of State legislatures each zealous to maintain intact its own hold on the banks within its territory. The system precluded both branch banking and the co-ordination of enterprises spread out in different States under the direction of a single central agency. But to some extent, at least, the crisis as exhibited in the moratorium, was the result of the overthrow goods sense by panic.

The plain truth seems to be that the Federal Reserve authorities had become unduly frightened on account of the pouring in of demands for redemption and completely lost their nerve. Under the Federal Reserve Act, the banks have power to effect a full suspension of reserve requirements, and had they only made use of the power, resorting, if necessary, to a partial suspension of domestic payments, it is quite likely that the international credit of the nation might have been maintained unimpaired, and the banking

trouble would not have developed into a world sensation. But apparently, this method of dealing with the situation occurred to none ; and it is in itself an indication of the defective type of professional direction available for American banking. In a very great degree, the banking holiday turns out to be the outcome of incompetent management under the Reserve system.

The new administration, unlike the Government of Mr. Hoover, had to vary its decisions within a very short period, but full allowance must be made for the fact that it was caught at a great disadvantage at its very inception, since the crisis gathered to a head on the same morning on which Mr. Roosevelt was installed as President.

Up to the moment, Mr. Roosevelt has contented himself with the grant of emergency lending powers to the Federal Reserve System. The main outlines of his policy, as embodied in the Banking Act of March 9, can be described as (1) control of gold stocks with authority to deal with hoarding ;; (2) continuance of the embargo on the export of gold ; (3) the reorganisation of commercial banks with sweeping powers for ordering their opening and closure; and (4) the provision of an emergency currency based on the issue of Federal Reserve Bank notes not only against Government securities, but also against the eligible assets of individuals and firms.

What is the value of these measures in regard to the American attitude on the gold standard question? Is the United States, at this moment, on or off the gold standard? Mr. Woodin, Secretary of the Treasury, claims that the United States is not off the gold standard, and warns people that "any such interpretation would be a grave mistake". In support of his contention, he draws a parallel between the United States and Switzerland which, though on the gold standard, forbade the export of gold.

To decide the issue, it would be relevant to consider what exactly constitutes the essentials of a gold standard. The convertibility of gold and currency which is the simplest test of a gold standard, does not any longer exist within the precincts of the United States. But the parity of the dollar with gold still continues, and such continuance must be interpreted as a measure of exchange control actively exercised to maintain for the dollar the same status as would belong to it had America remained on the gold standard.

Another test of the gold standard consists in the level of internal prices. Subsequent to the enormous fall in the price level on account of the moratorium, there has been some degree of recovery, but the fact remains that the higher prices for commodities marked on the exchanges are mainly imaginary, and have no correspondence to the actual state of affairs.

Mr. Woodin's emphatic denial of any intention on the part of the Government to abandon the gold standard marks to some extent, the official recognition of popular reluctance to accept the present state of affairs for an indefinite period.

FRANCE.

FINAL FORM OF THE BUDGET.

The Government's final proposals for the 1933 budget have been examined by the Finance Commission, and the balancing the budget has been brought near to the stage of being seriously considered as a possibility.

The economies recommended by the Commission exceed those proposed by the Government by 300 million francs. On a more liberal calculation of income, the Commission has raised the estimated revenue to 44,500 million francs, and brought down the deficit still to be covered to about 5,500 million

francs. Mr. Jacquier, the Commission's *rapporteur*, expects some 3,500 millions of the public debt to be extinguished during the year, and a further sum of about 500 millions to be saved in the shape of cuts in bonuses, etc. In case these expectations materialise, he says, "if we can reduce the deficit by a further 2,000 millions, we may consider the budget as balanced." But how is the reduction to be effected? M. Daladir, the Prime Minister, declared in the course of an interview to the Press, that the Government would pursue vigorously a policy of no taxes, substantial economies and large satisfaction accorded to the trading classes, and an energetic programme of administrative reform. But on a critical examination of the various phases through which the budget was passed, the conclusion cannot be helped that the improvements claimed are, in a large measure, the outcome of mere optimisic expectations which may not, afer all, materialise in future.

Last week, the Chambers gave authority to the Government to issue Treasury Bonds of 3,000 million francs in he first instance, to be raised later to 10,000 millions. The remarkable feature of the authority thus conceded was that it was given in spite of the deliberate refusal of the Government to disclose the terms and conditions under which the bonds would be issued. Opposition leaders in the Chamber of Deputies naturally concluded from this that the terms which the Government had in mind were so costly to the taxpayer that even those responsible for them regarded it as prudent to maintain silence until after legal authority for the loan issues was first secured. The disclosures since made confirm in the fullest degree the fears which were expressed in the Chamber about the heavy cost of the new loans.

The New Loan Issue.

Under the decree promulgated by the Government setting forth the conditions of the loan issue (limited to 3,000 million francs for the present), the price of the bonds, which carry interest at 4½ per cent., is fixed at 98½ per cent. They are redeemable in 60 years at 150 per cent. of the nominal value. It is estimated that the loan of 3,000 millions now raised would involve the taxpayers in an annual charge for the payment of debt of 162,958,320 francs for 60 years, which works out at a total of 9,755 millions. Rarely have the Government been driven to offer terms so costly for financial accommodation, and the generous rights now offered to investors must be regarded essentially as a measure of the diminishing credit of the Treasury in the money market.

The new loan has proved as attractive as it was intended, and the full amount was subscribed for within a very short time. The authorities, however, are keeping the lists still open.

GERMANY.

NAZI POWER IN THE NEW REICHSTAG.

Bavaria has always been the champion of the independence of the States of the Landar as against the Federal Government. The defeat of the Bavarian People's Party in the recent elections has hence robbed the other States of leadership for resistance against Nazi power, and rendered the centralisation of authority, under one executive, more thorough and complete than it has ever been since the advent of the Weimar Constitution. In addition, the Nazis have cleansed all municipalities of recalcitrant elements likely to regard their wishes with indifference or hostility. Every position of strategic influence in the police and other departments of public service has likewise been allotted to Nazi supporters, their erstwhile incumbents having been evicted by summary physical force. The entire public administration of Germany has been brought, by these and similar methods, under the complete power and dictatorship of the Nazis to an extent rendering the Constitution virtually inoperative.

From the standpoint of the Constitution, the election has rendered the Nazis the strongest political party in the State, but it is evident that not mere comparative strength, but complete independence of all other parties, is what Herr Hitler is determined to secure. It was doubtless with this objective that no invitations were issued to Communist deputies, in spite of their success in the election, to attend the meeting of the Reichstag fixed for March 21. The omission could not have been casual. It must be interpreted as a deliberate device to shut out all Communist representatives by force from participating in the proceedings of the Legislature. Should the entire body of 81 Communist legislators, or a substantial proportion of them, elect to brave Nazi displeasure in the exercise of their right of attending the Reichstag, the Chancellor, unless he decides on a change of policy, would be confronted with the necessity of having to resort to repression of a kind far more ruthless and obnoxious than any he has had occasion to indulge in so far.

For the time being, the effect of the exclusion of the Communists is to give the Nazis, with their strength of 288 votes in a Reichstag of 566 deputies, a permanent independent majority, without having to fall back on the support of other parties. Except for the purpose of changing the Constitution itself, which requires a two-third majority, the Nazi mastery of Parliament is thus complete. There is no longer any need for Herr Hitler to fall back on an alliance either with Herr von Papen or Herr Hugenburg, which only a short time ago was found indispensable for his accession to the Chancellorship. Drastic changes in the Cabinet rendering it more thoroughly

responsive to the dictatorial status of the Nazis in the State, and eliminating from it all unnecessary and incompatible elements, may hence be looked forward to, at no distant date, as almost a certainty.

Meanwhile, the excesses by means of which the Nazis rose to supreme power have, to some extent, come home to roost. By a people anxious for strong government to help them out of economic depression and unemployment, much will be forgiven in the way of violence from the agents of a prospective dictator. But with the object of the election campaign fulfilled, and the coveted power and supremacy fully attained, any further continuance of repressive methods must only tend to create a breach between public opinion and the wielders of executive power, and prevent the latter from consolidating their gains. This stage has now been reached in Herr Hitler's career. And it has been rudely brought home to the Nazi leader himself in a letter from Herr von Winterfield, President of the Nationalist Party in the Landtag, emphasising the need for a return to order, and pointing out that even the Government of Frederick the Great governed according to law.

In his attempts, since the election, to put an end to the violent activities of the Brown Shirts, Herr Hitler has been pursuing a wise course. But this very effort for a return to normal standards has created a clash between him and his chief lieutenant Captain Goring who, more than any other, has come to be personally identified with the Draconian character of Nazi methods of administration. It is surmised that there was a time, after the election, when Herr Hitler was, within the counsels of his party, as vehemently opposed to administrative violence as Captain Goring was in favour of it. Since then, however, Captain Goring has been at some pains to bring his actions into harmony with the present wishes of the Nazi leader, but the spirit of violence, once fed on incentives, dies hard, and the hardest work for Herr Hitler in the immediate future will be to school back to discipline and peaceful ways the unruly elements which, a little while ago, were strategically employed by himself and his party as the steps of a ladder for mounting up to dictatorial power.

New Reichsbank President.

Dr. Luther, the President of the Reichsbank, has resigned. The resignation was due to a difference of opinion between Dr. Luther and Herr Hitler over the question of credit extension for productive works. The Chancellor insisted on the mobilisation of at least Rm. 2,000,000,000 as being absolutely necessary for the revival of trade and industry ; but Dr. Luther drew the line at Rm. 850,000,000 flatly refusing any further extension, on the ground that it was wholly opposed to the principles in which he believed, and according to which the affairs of the Reichsbank had been conducted all the time under his direction.

In a letter to President von Hindenburg, Dr. Luther declared that the present demand of the Chancellor was in conflict with express assurances made to him that the Hitler Government would not be embarking on any currency experiment, and hence he had no alternative but to resign.

Dr. Hjalmer Schacht has been appointed to succeed Dr. Luther after prolonged deliberation by the Council of the Reichsbank.

Dr. Schacht is a former president of the Reichsbank who resigned in 1930 as a protest against the Young Plan, and was succeeded by Dr. Luther.

Nations to participate in the discussion as to the further action to be taken in regard to the Sino-Japanese conflict. The American Government has readily agreed to participate, without a vote, in the proceedings of the League Advisory Committee on Far Eastern Affairs, observing that "the dictates of common sense call for consultation with free and frank discussion among the nations." The Soviet, on the other hand, has adopted a totally different attitude. It approves generally of the Assembly Report on the Manchurian question, but declines to participate in the work of the Advisory Committee, on the plea that thirteen of the States on the Committee do not recognise the Soviet Government, and the ground for co-operation does not, therefore, exist. The real reason for the Russian attitude, however, seems to be a desire to refrain from any public criticism of Japanese policies likely to lead to strained relations. And this punctilious restraint in the expression of opinion seems to have been greatly strengthened and added to ever since Japan presented to the President of the Disarmament Conference a plan for naval armaments purporting to be necessary in the interest of Japanese national defence. It is, a significant fact that while almost every capitalist country in the world has denounced and condemned Japanese aggression in China, Russia alone has put on a mask of neutrality, and held back from the expression of any decisive condemnation.

Mr. MacDonald and Disarmament.

Mr. MacDonald has been pursuing a programme of vigorous personal canvassing for disarmament, but there is an element of unreality about the whole business. The position assumed by the British Prime Minister seems to be that progress in disarmament is blocked by the failure of other powers to agree, and Britain's role consists in playing the part of an umpire to bring about the required agreement. Disappointment with the standard of conduct of others, developing, curiously enough, into the adoption of just the standard that is derided, has been the bane of successive attempts for the achievement of constructive world disarmament. While there has been abundance of criticism, there has been precious little of lead. A real lead in action is alone what will give a fillip to the further work of the Disarmament Conference. And the responsibility for giving this lead lies more on the shoulders of those who, like Mr. MacDonald, have been doing brisk canvassing with others for the adoption of this or that particular policy, than with statesmen who have been playing a comparatively passive part. The idea of a conference between the heads of governments of the principal countries in the world, with a view to devise an effective programme which all could take up at once, without looking to each other for loopholes encouraging stagnation, is coming much into favour of late in League circles.

And this may be interpreted as the first signs of impatience at the method, which Mr. MacDonald has patented, of hiding the failures of vital international conferences with innumerable personal "talks" rendered possible by modern aircraft. In fact it is pertinent to emphasise here that Mr. MacDonald has by following this method achieved considerable success. Not indeed in bringing about an agreed settlement on highly controversial but vital questions, but in creating an impression in the public mind that the statesmen are intensely earnest in their desire for solution, but that the problems are so intricate and complicated. The peoples are beginning to see through the game. Unless diplomatic ingenuity finds another way of hoodwinking the public, governments are bound to feel the pressure of popular opinion. The present stage, however, is one in which every nation stands unmasked before every other.

Debts ...	1,89,616	Outstandings ...	3,49,112
Profit ...	26,184	Investments ...	1,97,000
		Cash and other balances ...	1,89,934
Total ...	11,06,173	Total ...	11,06,173

Extracts from Directors' Report:

Accounts for the half-year ended December 31, 1932. The extension of the Wheat (Import Duty) Act from April, 1932, to March, 1933, had very serious repercussions throughout last year on the trade of the flour mills situated at the ports, whose export business to foreign markets has fallen off to almost negligible dimensions. The effect of this loss of their export trade in flour has been a desire to participate to a greater extent in Bengal's markets, and Calcutta mills have had to contend with persistent dumping of Karachi mills' products at Calcutta and Rangoon. The profit for the half-year amounted to Rs. 31,868, to which has to be added the amount brought forward from last half-year Rs. 3,030, and Rs. 10,000 transferred from reserve fund, making a total of Rs. 44,898. After deducting Rs. 18,714 for depreciation and commission, there remains a sum of Rs. 26,184 available for disposal. The payment of a dividend for the half-year ended December, 31, 1932, at the rate of 7½ per cent. per annum free of income tax, is recommended. This will absorb Rs. 22,500 and leave a balance of Rs. 3,684 to be carried forward.

ALEXANDRA JUTE MILLS.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	15,00,000	Block (nett) ...	10,75,000

Mortgage ...	3,00,000	Coal ...	8,803
Reserve ...	4,216	Stores etc. ...	14,316
Other Debts ...	48,465	Outstandings ...	12,429
		Cash ...	7,300
		Profit & Loss ...	2,89,986
Total ...	11,52,681	Total ...	11,52,681

Extracts from Directors' Report:

Report for the half-year ended 31st December, 1932. The total raisings of coal for the six months were 11,724 tons as against 5,690 tons for the half-year ended 31st December, 1932. The despatches were 8,120 tons of coal as against 12,246 tons despatched in the corresponding half-year in 1932. The stock of steam coal has been valued at Rs. 2 per ton in these accounts: the average rate realised at pits' mouth for coal despatched during the half-year was Rs. 3-7-7 per ton.

After allowing for all charges and writing off Rs. 17,836 for depreciation there remains a loss of Rs. 2,89,985-9-1 to be carried forward to the current half-year.—Martin & Co., Managing Agents.

SAMLA COLLIERIES, LD.

Synopsis of Balance Sheet:

		Investments ...	8,468
		Cash & Deposits ...	22,519
		Profit & Loss ...	1,15,931
Total ...	21,37,684	Total ...	21,37,684

Extracts from Directors' Report:

Report for the half-year ended 31st December, 1932. The total raisings for the half-year were 76,050 tons and the total despatches amounted to 74,217 tons as against 66,995 tons raisings and 64,902 tons despatches in the corresponding half-year, 1931. The Collieries are working on restricted output. The average rate realised for steam coal at pits' mouth was Rs. 2-14-4 per ton.

After allowing for all charges and writing off Rs. 50,000 to Depreciation there remains at debit of Profit and Loss Account a balance of Rs. 78,418-14-3. This sum increases the loss of Rs. 37,512-3-10 brought forward from last half-year to Rs. 1,15,931-2-1 which is carried forward.—Martin & Co., Managing Agents.

MARGARET'S HOPE TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	3,00,000	Block ...	3,00,000
Reserves ...	75,000	Crop A/c. ...	24,671
Debts ...	18,780	Outlay ...	3,833
Profit & Loss ...	32,936	Outstandings ...	3,205
		Cash ...	95,007
Total ...	4,26,716	Total ...	4,26,716

Extracts from Directors' Report:

Report for the year ended 31st December, 1932, showing a profit on Revenue Account of Rs. 55,953-15-1, Add—Brought forward from Last Account Rs. 7,639-1-4, Less—Adjustments Rs. 2,404-10-4, balance Rs. 5,234-7, making a total of Rs. 61,188-6-1. From this there has been placed:—To taxation Rs. 3,252-4, to Reserve Rs. 25,000, equal to Rs. 28,252-4, leaving a balance of Rs. 32,936-2-1. This balance the Directors recommend should be disposed of as follows:—In payment of a Dividend of 7½ per cent. per annum (free of Income Tax) absorbing Rs. 22,500, leaving a balance at credit of Rs. 10,436-2-1 to be carried forward to next account.

The outtrn for the year was 2,156 maunds as compared with an estimate of 2,000 maunds and a crop in 1931 of 2,118 maunds. The bulk of the crop was sold in London at an average price, the Calcutta market equivalent of which is As. 18-5 per lb. against As. 16-5 per lb. in 1931. The estimate for season 1932 provides for a crop of 2,100 maunds at a cost of Rs. 1,02,852 subject to modification should the restriction of exports and crop be agreed to by the Industry.

Extracts from Directors' Report:

Report for the year ended 31st December, 1932, shows a profit on Revenue Account of Rs. 21,034-4-1, Add—Adjustment Rs. 20-10-6, total Rs. 21,054-14-7. Less—Balance brought forward from last account Rs. 1,905-6-10, balance Rs. 19,149-7-9, from this there has to be deducted:—Taxation Rs. 1,800 Land Purchased Rs. 2,320-9-9, improvement Account Rs. 5,000, total Rs. 9,120-9-9, leaving a balance Rs. 10,028-14. This balance we recommend should be disposed of as follows:—In payment of a Dividend of 2½ per cent. per annum (free of Income Tax), absorbing Rs. 10,000, leaving a balance at credit of Rs. 28-14, to be carried forward to next account.

The outturn for the year was 4,308 maunds as compared with an estimate of 4,300 maunds and a crop in 1931 of 3,645 maunds. The bulk of the crop was sold in Calcutta and realised an average price of As. 9-1 per lb. against an average price of As. 12-3 per lb. in 1931. The estimate for Season 1933 provides for a crop of 4,100 maunds to cost Rs. 1,62,641.—Begg Dunlop & Co., Ld., Managing Agents.

Extracts from Directors' Report:

Report for the half-year ended 31st December, 1932. During the half-year 20,461 tons of coal were raised as against 16,222 tons in the corresponding half-year, 1931. During the half-year 22,165 tons of coal were despatched as against 21,564 tons in the corresponding half-year, 1931. The Collieries are working on restricted output. The average rate realised for steam coal at pits' mouth was Rs. 3-11-10 per ton and the stock of steam coal has been valued in these accounts at Rs. 3 per ton.

After providing for all charges and carrying Rs. 17,000 to Depreciation Fund there remains a balance of Rs. 42,801-5-8 at the debit of Profit and Loss Account including the balance of Rs. 35,701-7-1 brought forward from previous half-year.—Martin & Co., Managing Agents.

Extracts from Directors' Report:

Report for 1932. The outturn for the season was 6,263 maunds against the estimate of 5,700 maunds and a crop of 6,225 maunds in 1931. Crop sales realised Rs. 1,24,191-15-11, equivalent to a net average of 3.97 annas per lb. compared with 4.49 annas in 1931. A useful standard of quality was maintained throughout the season and the depressed state of the tea market was entirely responsible for the low average.

Comparative figures of expenditure are given below:—Estimated Rs. 1,42,670, Actual Rs. 1,36,322,-12-5. After including Land Rents from the Zemindary, and Sundry Receipt, there is a deficit of Rs. 6,267-8-11 transferred from Revenue Account to the Profit and Loss Account.

After adjustments there is a Net Loss of Rs. 5,680-6-7 for the year, leaving a total deficit on Profit and Loss Account of Rs. 6,936-12-2 to be carried forward to 1933.

Total ...	4,39,070	Total ...	4,39,070

Extracts from Directors' Report:

Report for the year ended 31st December, 1932, shows a loss on Revenue Account of Rs. 102-4-4. The balance brought forward from last year was Rs. 3,803-8-6. To this has to be added:—Adjustments for season 1931 Rs. 729-2-7, Less—The loss for season 1932 as above Rs. 102-4-4, balance Rs. 626-14-3, leaving a balance at credit of Rs. 4,430-6-9 to be carried forward to next account.

The outturn of Tea for the year was 1,371 maunds against an estimate of 1,475 maunds and a crop of 1,393 maunds in 1931. The short crop is due to unfavourable climatic conditions. The major portion of the crop this year was sold on the Calcutta market, and realised an average price of As. 9-8 per lb. against As. 11-8 per lb. in 1931. The estimate for season 1933 provides for a crop of 1,600 maunds to cost Rs. 73,452-7, subject to modification, should restriction of exports and crop be agreed to by the Industry.—Begg Dunlop & Co., Ld., Managing Agents.

Extracts from Directors' Report:

Report for the year ending 31st December, 1932.

Including the balance of £58,359 7s. 0d. brought forward from the previous year, the Profit and Loss Account, after being debited with all charges applicable to the year, shows a free balance of £158,946-15-1. Amount written off Value of Jute Stocks £26,885, reserved against Income Tax Liability £10,750, total £37,635, balance £121,311-15-1. Interim Dividends were paid on 2nd August last as follows:—On Preference Shares, at the rate of 6 per cent. per annum £4,500, on Ordinary Shares, at 5 per cent. £30,000, total £34,500, less Income tax at 3s. per £, £5,175, balance £29,325. It is now recommended that Final Dividends be paid as follows:—On Preference Shares, at the rate of 6 per cent. per annum £4,500, on Ordinary Shares, at 7½ per cent. £45,000, total £49,500, less Income Tax at 3s. per £7,425, balance £42,075, total £71,400, leaving a balance to be carried forward of £49,911-15-1.

As customary, property and plant continue to be maintained in a highly efficient state and are kept fully covered by Fire Insurance; likewise Loss of Profits and Standing Charges through Fire and other accidents are kept insured. The amount expended on replacement of Mill Machinery during the year was £2,893 8s. 3d.

			Cash & Deposits	...	33,041
			Profit & Loss	...	50,232
Total	...	1,91 426	Total	...	1,91,426

Extracts from Directors' Report:

Report for 1932. The outturn was 2,970 maunds 33½ seers compared with the estimate of 3,000 maunds and a crop of 2,711 maunds 5 seers in 1931. A severe drought was again experienced early in the season, but fortunately climatic conditions in the latter months of the year were favourable. Crop sales realised Rs. 61,124-7-9, equivalent to a net average of 4.11 annas per lb. against 5.19 annas in 1931. A useful standard of quality was maintained throughout the season and the depressed state of the tea market was entirely responsible for the low average.

Comparative figures of expenditure are as follows:—Estimated Rs. 86,100, Actual Rs. 79,611-15-11.

There is a deficit of Rs. 17,503-4-2 transferred from Revenue Account to the Profit and Loss Account.

There is a Net Loss for the year of Rs. 18,098-7-4 after the sundry adjustments disclosed in the Profit and Loss Account which include Rs. 1,965 Capital Expenditure written off the cost of Machinery purchased in 1928 and Buildings erected in 1930, leaving a balance of the equivalent amount which will be written off these headings finally in 1933. With the balance from the previous year the total deficit to be carried forward to 1933 is Rs. 50,232-4-10.

			Cash & Invests.	...	2,17,423
Total	...	3,91,470	Total	...	3,91,470

Extracts from Directors' Report:

Report for the year ended 31st December, 1932, shows a net profit of Rs. 20,866-1-0. On transfer of this sum and after appropriation of Rs. 2,820-14-0 from the Reserve Fund there is a balance at credit of Profit and Loss Account of Rs. 36,753-11-8.

It is proposed to pay a Dividend of 25 per cent. for the year and to carry forward Rs. 1,753-11-8.

Crop weighed out 1,890 maunds against 1,857 maunds in 1931. The average selling price was 10 annas 1 pie compared with 13 annas 10 pies in the previous year.—J. A. Brown, Managing Director.

RAJGARH TEA CO., LD.

Synopsis of Balance Sheet:

			Outlay	...	5,438
			Outstandings	...	867
			Cash	...	297
			Profit & Loss	...	26,541
Total	...	3,00,202	Total	...	3,00,202

Extracts from Directors' Report:

Report for Season 1932. Revenue Account shows a loss of Rs. 14,145-10-11 and after making sundry adjustments, a balance of Rs. 26,540-13-11 remains at debit of Profit and Loss Account to be carried forward.

A finer standard of plucking was adopted throughout the season and crop weighed out at 1,822 maunds as against 2,070 maunds in the previous year, whilst the average prices obtained were annas 6-8 and annas 6-5 lb. respectively, which in view of the lower market ruling may be considered very satisfactory.

Estimates of crop and expenditure for the current season are delayed pending a decision with regard to restriction of crop.

ROOPACHERRA TEA CO., LD.

			Investments	..	4,272
			Cash & Deposits	...	70,075
Total	...	3,75,077	Total	...	3,75,077

Extracts from Directors' Report:

Report for 1932. Despite a drought in the early months of the season and severe hail-storms in March and April the outturn was 1,538 maunds 15 seers compared with the estimate of 1,400 maunds and a crop of 1,519 maunds 34 seers in 1931. It is fortunate that the weather in the latter months of the year was favourable. Crop sales realised Rs. 91,013-7-5 equivalent to a net average of 11.83 annas per lb. against 12.56 annas in 1931. The second flush teas, although good, were again not as fine as in some years and unfortunately the market for the inferior quality manufactured during the monsoon period continued to be very depressed, both of which combined to bring about the low average.

Comparative figures of expenditure are given below:—Estimated Rs. 72,600, Actual Rs. 77,895-9-6.

After providing for Staff Commission there is a credit balance of Rs. 25,623-14-11 transferred from Revenue Account to the Profit and Loss Account.

The Net Profit for the year, after adjustments, is Rs. 27,256-13-8, and with the amount brought forward from 1931 there remains a final balance on Profit and Loss Account of Rs. 38,275-1-3 which we propose, with your approval, to deal with as follows:—Pay the Preference Dividend for 1932 Rs. 7,000, pay a Dividend of 10 per cent. on the Ordinary Shares Rs. 12,500, transfer to General Reserve Account (bringing this up to Rs. 1,10,000) Rs. 10,000, carry forward to 1933 Rs. 8,775-1-3, total Rs. 38,275-1-3.

WORLD OF INDIAN FINANCE

Calcutta, April 7, 1933.

A light abatement in demand was noticeable this week, due, presumably, to the resumed flow of funds from Treasury Bills Maturities and to the receipt of rupees against the market's sale of sterling to the Government. However, the firmer money conditions, particularly noticeable in the previous week, were responsible for a sudden and sharp shrinkage in the volume of applications for Treasury Bills on the tender day. Applications received came only to the total of Rs. 64.25 lakhs. All the tenders were accepted. The average rate of accepted tenders was Rs. 1-2-11 as against Rs. 1-2-6 in the previous week. Even on March 28, a drying up of the Treasury Bills stream was noticeable; and the developments in this regard must, therefore, be considered as somewhat unfavourable. The average discount rate has risen; and, even so, the amount received has declined. In view of this circumstance, it is necessary to gauge what the Treasury Bills operations are likely to be in the next few weeks. The view was advanced, in this column, that amongst the Indian banks and investment institutions, the total capacity for absorbing Treasury Bills is still over Rs. 1 crore per week. How is the fall in the tenders of this week to below the limit of Rs. 1 crore to be reconciled with the view put forward by us. It seems to us that as interbank call money was fetching a rate as high as 3 per cent. on occasions, banks, which otherwise would have taken up Treasury Bills, had found it more profitable to put out their funds on call account. So long as such attractive rates are available for short credits, and so long as these rates are higher than the yield available on Treasury Bils, banks would take advantage of the higher call money rates for as long as possible; and they would come back to Treasury Bills only when, for any reason or other, call money rates ease off again.

The question, therefore, is this: Are steady conditions likely to continue to prevail in the short loans market? Considering that there has been no demand on account of trade; considering that the amounts released from Treasury Bills Maturities are now fairly substantial and will flow in a regular stream for many weeks; and considering that the Government seem to be prepared to follow the market up to apoint on the downward grade of exchange as regards their sterling purchases, we are of the opinion that comparatively lower rates for call money are bound to be witnessed after the Easter holidays. Once call money becomes unattractive, Indian banks and other institutions will revert to the taking up of Treasury Bills. As a matter of fact, when they do so revert, the first week or two thereafter will see an accelerated flow of funds from this quarter. To the extent that such institutions have not taken their full quantities for the last two weeks, they should have larger funds released to them from the short loans market. These funds, together with the amounts received through Treasury Bills Maturities, must needs be reinvested in Treasury Bills as soon as call money rates go below one per cent. While we, therefore, believe that this shrinkage in fresh sales of Treasury Bills is only a temporary phase, we should, at the same time, urge that the Controller of the Currency should be prepared to make the interest yield on Treasuries slightly more attractive if it is found that the paucity of applications becomes a feature of auction after auction. A stage has been reached when special tact and shrewdness in Treasury Bills policy and operations is needed. This is one of the turning points; but it is still in the power of the Treasury to maintain its grip over its short-term borrowing operations.

The government securities marked suffered a setback over the past few days. From the high level of Rs. 89-4, 3½ per cent. Rupee Paper has receded to Rs. 87-8; and 4 per cent. 1960-70 has fallen from Rs. 100-14 to Rs. 99-8. It is believed that the Imperial Bank has sold large parcels of these securities on the market. In the last quarter, the Bank increased its portfolio of giltedge holdings by Rs. 6 crores. It is, therefore, no matter for surprise or adverse comment that at a suitable opportunity, the Bank has lightened its load. At the same time, we should urge that the utmost circumspection should be used in this matter of selling securities just on the eve of a conversion loan operation. While the setback in prices has so far been nothing considerable, the fall effected on the sale of securities by the Imperial Bank may prove to be far more serious

when the market comes to know, on April 20 which is the settlement day for giltedge in Bombay, the exact volume of securities that have been disposed of by the Bank. If it is found that the offer of ready scrips for a large volume is beyond the capacity of the market to digest, the Bank should be prepared to come out as buyers immediately on the detection of such a symptom. We believe that owing to the intervention of the Easter holidays, the plan for the next phase of the conversion loan may be announced only in the third or fourth week of April. We do not see why there should be a postponement beyond this month. If so, there is every need for taking all measures to prevent undue deterioration in the giltedge market. After the loan is announced, the authorities should be prepared to buy securities on an active and aggressive scale and thus create once again lively and bullish conditions in giltedge. The Bank would be in a stronger position to undertake purchases in this regard as its sales of securities this week and last week have lightened its portfolio of giltedge. The Government also should be in a particularly strong position to undertake such open market operations as they have, as on April 1, 1933, Rs. 6.88 crores to the credit of the Debt Redemption Fund. We do not object to sales of securities by the Bank or the Treasury as and when such operations would not unduly impair the market. But they should ever keep themselves ready for renewing purchases when such purchases are needed for the success of new loan plans.

NOTICE

As our Air Mail packets were delivered late on Friday, the weekly Air Mail features do not appear in this issue. The next number of *Indian Finance* which will duly contain the "Overseas' News" section will be published on Wednesday, April 12.

Hardly has the American situation cleared up than another cloud has been cast on world finance. The abandonment of the gold standard by Germany has been indicated as a possibility by the London correspondent of the *Statesman*. Such a danger is due to the decision of the Reichsbank to repay the £14,000,000 credit granted by the Bank for International Settlements. It is unfortunate that Germany has to contemplate this step just when President Roosevelt has signed the order lifting the embargo on the export of gold for necessary commercial transactions, thus restoring the gold standard for external purposes, though internally the penalties for hoarding still continue. It is to be hoped that the danger of adding one more to the countries off gold will be avoided by the nations taking timely measures. Great Britain and America to whose manufactures Germany is a formidable competitor should assit in keeping her on the gold standard.

Mr. Rai Ram Dev Chokhany Bahadur, presiding at the annual general meeting of the Marwari Association, has joined his voice to the chorus of protest against the policy of the Government as regards the unrestricted exports of gold from India. Referring to the Finance Member's claim to a sound budget and his boast regarding Government's high credit position, the Rai Bahadur said that people were not convinced. He asks: How can they be, when economic distress is so acute and they find themselves compelled to part with all their gold savings and even women's ornaments to meet their ordinary requirements?" He points out that, though gold exports have stood both the British and the Indian Governments in good stead at a time of extraordinary stress, they have impoverished the country's reserves. He urges that Government should cut down their expenses, both civil and military, and fix a

(Continued on page 617).

FINANCE ABROAD.

The currency and banking stables in America are, it is obvious, being cleaned with Herculean zeal and thoroughness. It is too early to say that complete success has been achieved or even to feel satisfied that assured success is in prospect. Nevertheless, that President Roosevelt has a quick mind, strong will and powerful driving force is more than conclusively proved. It was unfortunate that immediately on his assumption of office, the crisis broke out in the gravest form. But, from another point of view, the very crisis has been a stroke of fortune as it has necessitated thorough-going and drastic measures which, sooner or later, should have been adopted, and which, it were best, should, sooner be adopted; it has also served to convince the world that a strong, resolute and shrewd President, in whom the utmost confidence could be imposed by people at home and abroad, is at the helm of affairs. It may be truly said that great as was the disaster that well-nigh engulfed the United States, greater was the personality of the President who went out, undaunted, to meet the disaster and overcome it.

On the opening of business after the holidays, a great deal of work has been done; and a large part of the ground cleared up. Banks have been resuming normal business in larger and larger numbers. Up to the end of Air Mail week, 4,912 member banks and 7,724 non-member banks, making a total of 12,636 banks, have opened, after having their soundness certified by the Secretary of the Treasury. Banks that are yet to open (of whom a good many may not be allowed to open at all) are 4,714. According to the *American Banker*, at least 38,000 million dollars, representing 88 per cent. of the nation's bank deposits, have now been unfrozen as a result of the progressive reopening of banks throughout the country. Even more satisfactory is the position as regards the return of gold and gold certificates from the public. The return of all gold worth over a hundred dollars must be made before May 1, the penalty of failure to do so being a fine of 10,000 dollars or ten years imprisonment. Gold and gold certificates to the value of 400 million dollars are reported to have been already returned to the Federal Reserve Banks and the Treasury. The Federal Reserve Board has received from banks the fullest report in regard to clients who had withdrawn gold over the past two years without returning it. The situation in this regard is, therefore, being brought under the strictest control. There is to-day a general campaign that the policy of the banks should be to conserve their assets and rebuild their capital; and many banks throughout the country have, in pursuit of this policy, cut their dividends. This policy is likely to be insisted on for some time to come as part of the plans to cleanse the banking system. Several banks in New York and elsewhere appear likely to continue on the old rates but they will undoubtedly be exceptions. Plans for the examining of Government expenditure have been put through. The Administration's internal reorganisation plans also continue to progress. Drastic regulations of stock exchange trading is being considered, including the introduction of the English system of term settlement and the abolition of loans by brokers to speculators. For March 15 refinancing, the issue of certificates, of five months and nine months, bearing interest at 4 per cent. and 4¼ per cent. respectively were issued to the total amount of $800 millions. The beer and wine bill permitting the sale of beer and light wine with an alcoholic content of 3.2 per cent. has passed through all the stages, including the President's assent. Extensive programmes are being made by brewers for new buildings and equipment. Considerable budgetary relief is also expected. It will, thus, be seen that as a result of President Roosevelt's firm handling of the banking crisis, the hoarding of

gold and gold certificates, and the budgetary maladjustments, the dollar may now be said to have emerged unscathed from its ordeal.

From the beginning, the American monetary authorities have been maintaining that their country was never off the gold standard. The exact significance of this claim was discussed, on several occasions, in *Indian Finance ;* and it was suggested that so long as restrictions of various kinds were in force, the claim could not be wholly justified. The American authorities have not been unaware of this point of view ; and they are, accordingly, proceeding, as fast as they can to relax the restrictions. Gold standard, as America had in the pre-crisis period, had three definite features:

(1) Convertibility of paper money into gold for domestic purposes ;

(2) Re-export of gold for international purposes ; and

(3) Maintenance of a definite parity of the dollar with gold currency.

The parity of the dollar with gold has been strictly maintained all through. But as regards 1 and 2, restrictions were imposed immediately on the emergence of the crisis. Of these, the embargo on the export of gold was the more serious factor. As a result of this step, considerable fears were entertained, in international financial circles, as regards the possible attitude of the American Government with respect to the 400 million dollars of ear-marked gold held in the U.S.A., for the account of foreign central banks. The American authorities had been anxious to do everything possible to allay these fears. On March 18, the New York Federal Reserve Bank set at rest such fears by permitting the export to Italy under special license of gold of the value of $8.5 million. This gold was held in ear-mark for the Bank of Italy. The action of the Federal Reserve Bank of New York was interpreted as the shadow cast by the coming event of a general relaxation of the restrictions on the export of gold. On April 5, President Roosevelt signed the order lifting the embargo on the export of gold and permitting such exports for necessary commercial transactions. But the order regarding the return of gold and gold certificates remains. The present position, therefore, is that gold will be available for *bonafide* requirements in connection with international transactions ; and the old parity of the rollar is being maintained. But gold is not to be available if it is needed for the purpose of domestic hoarding. In other words, the only alteration in the gold standard system now in force in America is that it is on the basis of a gold bullion standard.

In an earlier issue, it was pointed out, in these columns, that inflationary effects of the heavy purchases of gold by the Bank of England were, in part, being negatived by sale of securities. The Bank return for the week ended March 22 is of great interest in this connection. The gold stocks began to swell as from January 18; since then, the combined portfolio of government securities and "other" securities has gone down by £42 million to £85 million. Over this period, the gold stocks have expanded by £50 million. This means that as against an inflation of £50 million that might have taken place, £42 million have been offset. The effect of this move has been to cause an increase in public deposits and a decrease in bankers balances. Nevertheless, this has had no effect on the short loan market. Credits have been in good supply and bill rates have eased further. At one stage "hot" bills found buyers at 9/32 per cent. which is considered to be a record for all time. If the authorities had effected credit expansion to the fullest limit, it would have depressed bill rates to a point which should have caused real embarassment to the money market circles. There can be no doubt that the Bank of England is inclined to the view that it were hazardous to rely on the possibility of the new stocks of gold being permanently retained. It must not be forgotten that the period of seasonal strength of sterling is drawing to a close.

The developments as regards the dollar are also calculated to remove the apprehensions that were held, at one stage, on international gold standard. The dollar has vindicated its strength; and the American authorities have been able to remove the restriction on the export of gold, which was a matter of real concern from the international point of view. This week's lifting of the embargo on gold exports from America should reinforce confidence in international gold standard and generally in gold currencies. To the extent that confidence is restored in the dollar principally as also in other gold currencies, the main bullish factor that was responsible for the strength of sterling resulting in considerable acquisition of gold and gold exchanges has ceased to be effective. The future of sterling is, therefore, less bullish than what was the case since mid-January. We do not suggest that there is likely to be any strong bearish influence calculated to depress sterling. But we do suggest that, in any case, the chances for further accretions to Britain's holdings of gold and gold exchange are now very slender. From the experience of the past it were best if, with the main cause of the strength of sterling removed, the additional holdings are kept in a manner in which they are available in the event of any adverse developments. Had the gold acquisitions been utilised for expansion, the resultant position would have been such that contraction would have been necessary in the event of unfavourable developments in the future. The *Financial Times* makes the following comment on the policy of the Bank of England in this regard :

> "The rapid neutralisation in the past three weeks is a little unexpected, for although (as has repeatedly been stressed in this column) it is very questionable whether credit expansion could do more than depress bill rates and raise giltedged prices. Mr. Chamberlain's statement in the House some weeks ago certainly implied that the authorities intended to make a further effort at raising commodity prices by this means. The Bank Return suggests that the attempt has been abandoned".

The authorities should have come to the conclusion that an expansion of credit, while causing a fall in bill rates, may not have any large or direct effect in the way of a fall in money costs.

1677

BANKING:

It is sometimes said that, in speaking of simple transactions, Bank officials are prone to use terms which, far from being enlightening, are calculated to make confusion worse confounded in the ears of the customer seeking an explanation why he should do this or not do that. Branch Managers of Lloyds Bank are always willing to explain to customers and others the "Why and the wherefore" they should do a thing one way in preference to another.

LLOYDS BANK
LIMITED.
(Incorporated in England.)

Subscribed Capital £73,302,076
Paid-up Capital £15,810,252
Reserve Fund £ 8,000,000

Head Office: LONDON, E. C. 3.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

The Company issues Policies covering :—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

COMMUNIQUES AND RETURNS.

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Monday, April 3. The total amount offered was Rs. 64,25,000. Tenders at Rs. 99-11-3 and above were accepted in full. The total amount accepted was Rs. 64,25,000, the average rate of accepted tenders being Re. 1-2-11 per annum.

Tenders for Rs. 1½ crores of three months Treasury Bills will be received on Monday, April 10. Successful tenderers should make payment on Wednesday, April 12. Other conditions are as usual.

STERLING TENDERS.

The Controller of the Currency notifies that on Wednesday April 5 tenders to the amount of £1,215,000 at 1s. 6 1/16d. were received and allotted approximately 82 per cent. Lower tenders were rejected.

On Wednesday, April 12 £1,000,000 will be offered for tender on the same conditions as previously announced.

MARKET REVIEWS.

CALCUTTA STOCK EXCHANGE.

(By our Correspondent).

Thursday Evening.

Jute.—This section was fairly active so far as speculative activities are concerned. Howrahs on rumour of maintaining their dividend at 1-4 for half-year ending March 31, 1933, moved up to Rs. 39-12 and Kamarhattys steadied up in sympathy to Rs. 382. As the session advanced, prices gave way, Howrahs receding to Rs. 39-6 and Kamarhattys to Rs. 378. Hessian prices were fairly steady at Rs. 8-6 while raw jute was unchanged roundabout Rs. 26-8, Ballys were placed at Rs. 105-8, Barnagores Rs. 110, Champdanys Rs. 114, and Clives Rs. 23-12, in small lots. Since there were only three working days during the week under review, there was not much business.

The prices in this section were well maintained, only at low interest rates. Since companies for the half-year ending March 31, 1933 will shortly declare their dividends, there is little chance of prices slipping back to lower levels. It should not be forgotten that with present prices of Hessian and the raw material, mills are making fairly decent profits.

Cotton.—Dull conditions have obtained, and only a limited amount of business was put through.

Coals.—This section has been almost idle during the earlier part of the session, and rates were nominal. Towards the close Bengals were in demand at improved rates.

Miscellaneous.—Sugar shares kept steady at about last levels, while among Engineering shares, Arthur Butler, Burn & Co. (Ordy.), and Indian Standard Wagon (Ordy.) improved considerably. Electric shares have been in demand but scarcity of scrips accounted for the restricted turnover. Among others, Triton Insurance, Murree Brewery and Indian Wood Products kept steady at level rates.

Banks and Railways.—Imperial Banks kept steady and a transaction was reported in Central Banks at Rs. 22-4. Only a small turnover resulted in Light Railways due to scarcity of sellers.

Government Securities.—This section opened easier after the week-end and ruled so after the close. 3½ per cent. Government Paper was quoted up to Rs. 87-6, 4 per cent. 1960-70 loan up to Rs. 99-2, and 5 per cent. 1945-55 loan up to Rs. 112-14. Other loans were also easier in sympathy. The Bank rate remained unchanged at 3½ per cent.

Tea.—Shares continued dull and neglected.

JUTE.

(By our Correspondent.)

Thursday Evening.

During the week under review the market has ruled steady but quiet, the fluctuations being confined, like last week, between Rs. 25-12 and Rs. 26-12.

The weather conditions have remained dry and rain is badly wanted for planting jute. Sowings are very much behind last season, the continued dry spell being responsible for the delay. According to the weekly report issued by Messrs. Sinclair and Murray the sowings for the week ending April 1, were:

Narayangunge	...	3	annas	against	7	annas	last	season
Chandpur	...	10	,,	,,	12	,,	,,	,,
Chaumuhani	...	8	,,	,,	8	,,	,,	,,
Akhaura	...	1	,,	,,	8	,,	,,	,,
Niklidampara	...	8	,,	,,	15	,,	,,	,,
Sarsibari	...	2	,,	,,	2	,,	,,	,,
Mymensingh	...	2	,,	,,	0	,,	,,	,,
Serajgunge	...	4	,,	,,	6	,,	,,	,,
Bhangna	...	2	,,	,,	4	,,	,,	,,

Due to poor sowings the market has ruled steady sellers being reserved. Buyers, however, are not willing at the moment to raise prices partly because they have already purchased for their immediate requirements and partly in anticipation of further lower prices of jute which may take place if good rains fall in the course of this week or next.

The goods market has also ruled fully steady and lent support to jute. The news of rains and the formation of a depression in the Bay of Bengal on Wednesday had, however, a damping effect and at the time of writing the market is rather easy.

Business, though of a small size was done in ready firsts at Rs. 24-8. Mills were interested in special parcels at bazar rates; sellers, however, were asking two annas more.

JUTE GOODS.

(By our correspondent).

Calcutta, Thursday Evening.

During the week under review the market has ruled steady. Fairly good business was done in eleven porter hessians and heavy goods at slightly better rates. The demand was fully met by the bazar, mills not showing any tendency to depress the market.

Early in the week the market was rather weak, but later on enquiries from overseas market values showed a good appreciation and business was done at enhanced rates. The best rates, however, could not be maintained; the market being slightly easy at the time of writing and rates below the best.

The export of hessians has amounted to a little over 8 crore yards or more than the bazar anticipations. The export of hessians cloth and bags taken together, for the month of April, is a little over the month's production, thus the stocks being less than what they were at the opening of the month.

The demand at the moment is fully met and it will not be surprising if the market rules a shade easier during the next week.

COTTON.

(By our Correspondent).

Bombay. Thursday Morning.

For the better part of the week the market was closed in Bombay due to holidays. On the whole the market has ruled easier. Due to long liquidation on May delivery, Broach April/May has touched Rs. 169-8. The markets in New York and Liverpool have ruled quieter. Indian cotton being slightly below the parity, holders here have sold in the Liverpool markets.

The latest quotations are:

PIECEGOODS.

(By Our Correspondent).

Calcutta, Thursday Evening.

Since reporting last week the market has ruled quiet and easier, without any appreciable business being transacted either in Lancashire or in Japanese goods.

The demand for Indian cloth is equally poor. Stocks are not easy to clear. New mills are being closed not only in Bombay and Ahmedabad but in the interior as well, the latest addition being the Binod mills at Ujjain, employing about 2,000 operatives.

There has been some trouble between the local Indian cloth dealers and commission houses, over certain terms and conditions, which in turn has affected the ready sales. It is hoped that the misunderstanding will be soon removed and the usual pleasant relations established between the two sections of the trade.

Yarn Output.

The report sent out from Brussels to the effect that the International Cotton Committee had adopted a resolution "recommending a week's cotton holiday" needs some explanation and qualification. The holiday is intended to apply to spinning mills alone and primarily to those producing for export trade.

The terms of the resolution are as follow:—

That as a first step towards bringing spinning production into conformity with demand this committee unanimously recommends that all members of the affiliated associations should close their mills for one week at the earliest possible moment during the month of April.

The impression received from the report was due to the fact that the International Cotton Committee is an organisation of manufacturers as well as spinners.

Mr. N. S. Pearse, the general secretary of the Federation, said that copies of the resolution were being sent out that day to all of the affiliated associations in the twenty-two countries represented in the federation. With the exception of Japan, all of the countries principally concerned—those making for export as well as home consumption—were represented at the meeting of the committee, and, as the resolution stated, every one of the representatives was in favour of this "first step" in the curtailment of production. "The three important cotton spinning and manufacturing countries in the Far East—Japan, China, and India—were not represented at the meeting," he added, "but they are being communicated with, and it is hoped, and indeed believed, that when they hear what the European nations are doing they will participate in the movement."

The nine countries represented at the Brussels Conference were Great Britain, Germany, France, Italy, Switzerland, Czecho-Slovakia, Belgium, Holland, and Sweden.

This is the first time the International Cotton Committee has recommended a world curtailment in the production of yarn since 1904, although it was the urgent need for such action which brought the International Federation into being. When the American, Daniel Sully, "cornered" the

CALCUTTA.

cotton market in that year, a conference of European cotton organisations, convened by the Belgian Association, decided to counter his purpose by a general curtailment of production. This brought down the price of cotton, with disastrous results to Sully.

TEA.

(By Our Correspondent).

Calcutta, Thursday Evening.

There was no sale in Calcutta during the week under review.

London Auction:

At the London Auctions on Monday 28,700 packages of Indian tea were submitted for sale. There was a keen competition. Common sorts were slightly firmer and mediums were fully steady. Better sorts, particularly autumnal teas sold well. The following were the lowest prices fetched during the day's auction:—Common Pekoe last auction 7½d., to-day's auction 7½d. lb. ; Common Broken Pekoe last auction 7¼d., to-day's auction 7¾d. lb. ; Common Orange Pekoe last auction 7½d., to-day's auction 7¾d. lb. ; Common Broken Orange Pekoe last auction 7¼d., to-day's auction 8d. lb. The following are the value prices:—Clean Common Pekoe last auction 7⅝d., to-day's auction 7⅞d. lb. ; Clean Common Broken Pekoe last auction 7⅞d., to-day's auction 7⅞d. lb. ; Clean Common Orange Pekoe last auction 8d., to-day's auction 8d. lb. ; Clean Common Broken Orange Pekoe last auction 8⅛d., to-day's auction 8½d. lb.

WHEAT.

(By Our Correspondent.)

Calcutta, Thursday Evening.

There is not much change to report in the wheat market during the week under review. The tone of the market is easy, prices ruling almost at last week's level.

The price of Indian wheat being above the world party, the export of wheat is considerably lower. For the same reason the business in flour is very restricted and is confined to internal markets alone. The offtake of flour is very poor, several mills are therefore working reduced hours.

By the recent drop in readies, business in Australian wheat is arrested, though the spot lots are still available.

The quotations at the time of writing are:

Punjab Ready	...	...	Rs. 4 0 per md.
Cawnpore ,,	...	...	,, 3 12 ,,
Beta May	...	...	,, 3 5 ,,
Beta September	...	...	,, 3 7 ,,

World Markets.—There has not been much change during the week under review, the tone of the market was steady but quiet. The feeling, in spite of heavy stocks, is optimistic, but that in Australia is not so. The latter has been a free seller all along, and according to the latest information available, certain cargoes bound for China have been diverted to Europe. The quotation in New York or Liverpool markets remains unchanged.

Barley.—The main factors influencing the production of barley in the principal exporting countries and its marketing in the principal importing countries of the world are reviewed in the "Barley Survey," published by the Empire Marketing Board (H. M. Stationery Office. Price 2s.)

The Survey embodies the results of an investigation of the important market for barley undertaken by Professor H. C. Grant on behalf of the Manitoba Department of Agriculture. The problem is one which particularly affects Canada, where the acreage under barley has trebled since the five years before the war and where barley has now assumed importance as a major cereal crop in the Prairie Provinces. Average exports from Canada are about seven times as great as from Australia and India combined. The Survey, therefore, is concerned primarily with the problem of marketing the Canadian surplus output in competition with the supplies coming from the United States, South America, the Danubian countries and Russia.

Although there has been a slight increase in the world's barley output since the prewar years, the volume of international trade in barley has shrunk materially from over 5 million tons in the period 1909-13 to about 3¾ million tons in 1926-30. No other agricultural product has shown so great a reduction in international trade, except oats and certain oilseeds which have been replaced by other oil-bearing seeds and nuts.

BULLION.

(By Our Correspondent).

Thursday Evening.

Gold.—There have been only small fluctuations in the price of gold during the week under review. London quotations have fluctuated between £6-0-9½ and £6-0-4½ per oz., while the local market has ruled between Rs. 29-12 and Rs. 29-10 per tola. Exports from India continues unabated, the amount exported during the last week coming to near a crore of rupees. The total exports since England went off the gold standard amounted to about Rs. 120 crores. Stocks in Bombay continue to remain at about 3 lakhs of tolas, and daily offtake is poor at 3,000 tolas.

Silver.—Easier conditions have prevailed in the markets of New York, London and Bombay ; quotations have come down to 27⅝ cents, 17¼d., and Rs. 55-6 respectively. In Calcutta the quotations are about Rs. 55-10. Stocks are low at 4,500 bars and daily offtake remains unchanged at 30 bars. There is no interest displayed in the market either by speculators or holders. Due to want of buying support, the local prices are getting more and more below the import parity.

New York Commodity Exchange.

It is officially announced that the Commodity Exchange, Incorporated, will be quartered in the International Telephone and Telegraph Building, where it is expected to start functioning on June 1.

"The Commodity Exchange, Incorporated," is a consolidation of the National Metal Exchange, the Rubber Exchange of New York, the National Raw Silk Exchange, and the New York Hides Exchange. The new exchange will deal in rubber, silk, hides, silver, copper, and tin.

The Exchange will be limited to 1,015 members, subscribing $900 each, which will give the new Exchange a working capital of over $900,000. Memberships can be acquired only through the purchase of existing memberships.

SUGAR.

(By our Correspondent).

Thursday Evening.

The market continues to rule dull and featureless. There is no fresh business to report from Java. The values are being maintained at above previous week's level.

The steamers due to arrive shortly are bringing only a small quantity of sugar. The stocks in Calcutta godowns are estimated at about 3,000 tons.

The quotations at the time of writing are:

Java White Ready ...	...	Rs.	10	5 0
,, Afloat ...	...	,,	10	4 6
Cawnpore Ready ...	...	,,	9	14 0

World Markets.

World markets have ruled fairly steady the prices being fully maintained. Although no fresh sales are reported to have been effected by Java for India, she is reported to have done a fairly large amount of business for Far Eastern countries. Freight has been increased from Java to India by 5 builders, this has made business still more difficult, but may tend to strengthen local prices to that extent.

SHELLAC.

(By Our Correspondent).

Calcutta, Thursday Evening.

The market has ruled easier and prices are further reduced over the previous week. There is no buying support, and the market is pressed down by the hedge sales and long liquidation.

The quotations are:

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

THE MEANS TO PROSPERITY.

In the world's search for the means to prosperity, the most valuable clue is derived from the two important failures of recent years. One is the futility of the mere inflation of credit and currency as an instrument of brisk business or higher prices. The other is, the failure of international conferences to arrive at any effective programme of action for ending the depression or bringing the revival nearer. It is difficult to place the two in any definite chronological order; for we are yet supposed to be on the eve of the World Economic Conference; and it is unfair even to politicians to suggest that the travails of the last few months have left no sense of realism in their minds. But it is possible to suggest that a national inflationary policy, conceived and carried out without reference to the policies and actions of other countries is in a sense the result of people's disillusionment about international conferences. It is not to be supposed that, in the absence of any fresh direction, the conferences of the future would do more than pass the same pious resolutions about the removal of tariffs, and exchange restrictions and other impediments which no nation has imposed in recent years out of mere choice. The Preparatory Committee to the World Economic Conference has given a clear indication of what is in store ; and nobody outside the circle of cabinet ministers, who are used to the solemn repetition of sentiments they do not believe in, can pretend to repose any faith in their efficacy.

* * *

But the later development is the failure of even a calculated inflationary policy. Inflationists of the type referred to in the context would perhaps still harp, in the manner of Dr. Sangrado, on the inadequacy of the dose and the treatment. But it stands to reason that any increase in the surplus funds of the money market in a time of shrunken purchasing power, is like sprinkling water on the foliage when the roots are dying for want of moisture. In a country like Great Britain the inflationary movement is nearly a year old ; and all that it has been able to achieve is the creation of conditions in which the British Treasury could effect colossal conversions and the giltedge market experience a boom. Of genuine relief to trade and industry, inflation is still singularly innocent.

* * *

Given, thus, the futility of conferences on the old plan and the failure of inflation, the former, representative of concerted, and the latter of isolated national, action, what is the alternative treatment to which world trade, now nearly on its deathbed, can look for life and health? It is clear that what the world wants in the first instance is a rise in prices. In the search for the means, as we mentioned at the outset, it is necessary to be clear as to how far the failures of recent years are a clue. If international conferences have been a failure, their failure must be attributed to the fact that the programmes which they commend to the nations for immediate execution are in many respects impracticable. Likewise, if inflation fails to bring about the desired rise in prices, it would not be valid to rush to the conclusion that in any scheme of reconstruction additions to currency are of no real or immediate use. It would only mean that the inflationary policy, as it has been so far pursued, is not calculated to bring the pressure of increased circulation on markets and prices. In other words, the additions to currency have stopped far short of being additions to purchasing power. If the international conferences would recognise that more than opening up the silted beds of world trade through removal of tariffs, it is necessary to ensure a greater volume of current expenditure on goods and services, not only would the programme be more acceptable to the nations but its adoption would be followed by immediate results of a favourable kind.

* * *

It follows, therefore, that the prime question that the world has to solve in its efforts to help a speedy revival is how best to ensure that additions to the currency circulation would be utilised as actual new purchasing power. Mr. Keynes in the series of articles in the London *Times*, of which a summary was attempted in the last issue of *Indian Finance*, has envisaged the problem purely in this light. We have been at pains to place Mr. Keynes' suggestions in what we may call a historical setting, as otherwise we apprehend that his suggestions in regard to loan expenditure by Government might be construed as being no better than the somewhat amateurish suggestions that spring from a child-like faith in the capacity of Governments to work the miracle. With all the spread of economic knowledge there is still a common feeling that, given the necessary earnestness, there is hardly any economic good which it is not in the power of Governments to achieve. The most refined form that such feeling takes is the demand for capital expenditure by the Government which normally is on a par with the famine relief works instituted by the Government in former days in India.

* * *

For a critical judgment of Mr. Keynes' proposals, one must recognise at the outset that they do not spring from any exaggerated notion of Government's capacity to achieve the apparently impossible. Mr. Keynes recognises that mere inflation cannot bring about the desired end. Equally, the world is less and less disposed to wait for the Governments to meet together in conference and then find ways and means of avoiding the directions of such a conference. An active policy is clearly called for; and such policy must in the first place, make up for those shortcomings of mere inflation, which account for its failure, and secondly, provide a clear-out policy on which the World Economic Conference can set its seal of approval and which the Governments can adopt without fear of having to abandon some of their cherished policies.

* * *

Mr. Keynes' suggestions, therefore, fall into two parts, one dealing with the loan expenditure by Governments and the other with a form of international inflation which will make it possible for less stable countries than, say, Great Britain to adopt such a policy, without the fear of break-down of exchange or the emergence of an unfavourable balance of trade. The object of the loan expenditure is to ensure an increase of purchasing power and the broadening of consumptive demand through increased employment. That this work, however imperative it may be, cannot be left to private agency or cannot be awaited in placid hopefulness is a point on which it is unnecessary to labour. The revival of private enterprise is dependent, solely on the revival of confidence. And how can we expect confidence to revive so long as there is no sign of improvement in demand or in prices? Thus we come back round the vicious circle to the same point, where we started, namely, how best to bring about

an improvement in prices. Thus loan expenditure has the most unaswerable argument in its favour that it is the only way out, bereft of any possible alternative.

* * *

It may be asked whether this way out might not ultimately prove a trap-door to worse troubles and a more complete ruination. It is in clearing up this natural misgiving that the authority and argumentation of Mr. Keynes are most called for. Needless to say, the benefits of loan expenditure, relatively to the privations of continued slump in business, are a matter of quantitative calculation; and his figures relate to conditions in England. In a country in which the unemployed cost money to the Exchequer, and the level of taxation is high, the most direct benefits of any increase in business activity, in whatever way it may be brought about, are a saving on unemployment benefits and increase in income-tax. Mr. Keynes' calculation is that out of a capital expenditure of £300 million, nearly 200 would come back to the Exchequer in the shape of savings on the "dole" and increases in income-tax. There can thus be no objection on financial grounds to a programme of loan expenditure. Perhaps the most persistent criticism of such proposals is on the ground that the amount of employment that can be created by capital expenditure by the State is negligible. But such critics fail to take full account of the employment indirectly created by a given amount of capital expenditure. It is generally assumed in England that an outlay of £500 is required to provide one man with employment for a year. But strictly speaking, the effects of this outlay on employment reach farther. The additional purchasing power and demand for certain capital goods thus created set in motion forces to which theoretically no limit can be prescribed. If the indirect effects are taken into account, Mr. Keynes urges, the amount required to provide a "man-year of employment" is not £500 but £150, on the most conservative estimate.

* * *

This course of action is suggested not only by the desire for better conditions but the anxiety to avoid a worse deterioration. Even if the Government were to view it solely from the standpoint of the National Exchequer, action on the lines suggested would be seen to be imperative. For the persistence of present conditions would mean further diminution of the national income, lower tax revenues, higher taxes and increasing retrenchment, all tending to accentuate the very evils we are anxious to avoid. There is a point, therefore, at which financial prudence, as it is ordinarily understood, would be indistinguishable from financial folly. Better far to set aside the orthodox canons of public finance, to relax the principles by which we determine whether a particular expenditure is to be met from tax revenue or from loans and to help a large outlay of State and individual on current expenditure.

* * *

For a rise in world prices, it would be idle to count on the repercussions of loan expenditure in any one country on the conditions in other countries. Such repercussions are not quite negligible; but a country which can afford to launch on a programme of capital expenditure would be justified in feeling that it would be far better if on such a programme the concerted action of a number of different countries could be secured. Before proceeding to examine the implications of this and the schemes suggested thereby, it would be well to examine the applicability of Mr. Keynes' suggestions to conditions in India. Clearly, we in India cannot claim any immediate saving to the Government's budget on account of any diminution in unemployment. For we are not paying out any relief to the unemployed. But even in India the reduction in employment has caused serious inroads into public revenue. In the first place, the retrenchment in Government and private service must account for a serious loss in income-tax, especially as the minimum of taxable income has been lowered since the Emergency Budget of September, 1931. In fact, the effects of a lower volume of middle class employment reach farther. Through the fall in the demand for goods of various kinds, some of them imported from abroad, the proceeds of indirect taxation also suffer. This applies also to the mass of industrial and other labour which has been thrown out of employment. So that while in England the saving on the dole consequent on increase of employment is a negative saving, any stimulation of employment in India would mean a positive saving. As for increases in the higher levels of income tax, it must be recognised that, with the contiuance of the depression in its present virulity, the basis of income on which taxes are assessed must go down. Anything calculated to check the deflation of profits must be welcomed. We believe we have said enough, though for obvious reasons we have not been able to make the quantitative calculations, which Mr. Keynes has made in the case of England, to show that the benefits of loan expenditure are not negligible in this country. We would confess, however, that the proportion of new employment which can be artificially created to the total unemployment in the country is very low. But the real measure in this regard is not the total unemployment in the country but the extent of employment which we can consider as normal.

* * *

It remains to examine one aspect of the question: what are the productive schemes which Government might prosecute now, if they are able and willing to do so? It must be confessed that in this regard we compare very unfavourably with England. In that country, economists and politicians have been at work for more than a decade to formulate schemes which would add to the wealth of the nation and afford substantial relief to unemployment. Economists have done it as part of their task. Politicians have done the same with the prime purpose of catching votes. But the result is the same. In India, Sir George Schuster was careful to point out in his budget speech that such schemes are far from ready to hand. While in his speech to the Legislative Assembly, H. E. The Viceroy raised hopes of a large programme of capital expenditure, the Finance Member in his budget speech threw cold water on such hopes by suggesting new capital expenditure on the Railways can be decided on only after the schemes formulated in the days of hectic expansion are examined in the light of the new problems connected with the question of road *versus* rail. There can be no dispute as to the wisdom of subjecting old schemes to the tests of later experience. But the Government must recognise that, unless they speed up the processes of enquiry and get ready with at least a few schemes to start with, they would not be in a position to make any contribution to the recovery.

* * *

As we pointed out earlier, there are certain implications of the need for a simultaneous movement in all countries regarding loan expenditure by Governments. It is not every country which is in a position to undertake capital expenditure without reference to the rest of the world or in the mere hope that others must sooner or later fall into line. Measures are doubtless, needed to enable nations financially weaker or less sound to joint the movement for increasing current expenditure. Such measures are comprised in a scheme of currency inflation outlined by Mr. Keynes, which we hope to be able to examine in a later issue.

INDIAN FINANCE AND WORLD FINANCE.

In the course of his Calcutta University Readership lectures, Mr. C. S. Rangaswami described himself as a practical but impatient idealist, and urged that, in the interest of world trade and world prosperity, the economic well-being of India should receive widespread and keener world appreciation. In his view, when steps are taken by India and the world for the conferring of a sunnier, ampler and happier life for the poverty-stricken millions and millions in India, they would, in their new-found happines and their new-enlarged scale of life, repay the world by causing so vast an increase in the consuming demand as to end, once and for all, the irritating problem of the world's surfeit of commodities. Nor had the speaker the slightest doubt in his mind that "if the Government and the people will it that India shall be great and prosperous, India shall become great and prosperous." He concluded, thus, on a hopeful note :

> "I believe that ere long will dawn on the British officials and the British businessmen in India the sense that the interests of British trade demand the creation of an India, politically contented and economically prosperous. On the part of the people, what is needed is a popular and more widespread understanding of the fundamentals of the Indian economic problem and a keener insistence that the right action at the right time should be taken in the right manner. On the part of the Government, what is needed is that measure of intelligent self-interest which will lead to the recognition that the rehabilitation of Indian finance is the basis of the rehabilitation of British finance and world finance".

Right action at the present moment is the definite adoption of a national economic policy on the part of the State and the creation of a Supreme Economic Council. By national economic policy, Mr. Rangaswami means that every step should be taken to convert the potential wealth of the country into actual wealth ; that all national resources must be conserved and made full use of ; that the budgetary, fiscal and monetary policy of the Government should be regulated so as to result in the improvement of national economy ; and that every opportunity should be seized for the improvement and strengthening of the intrinsic financial and economic position. The suggestion that a policy of this nature should be adopted implies surely, that such a policy had not been in force hitherto. Such is, in fact, the contention of the lecturer. We may quote the following extract in this connection :

> "From this analysis, it will be clear that it is not national economic considerations that were the prime motive in the formulation of Government's policy as regards questions like standard, ratio and the utilisation of suitable opportunities for the strengthening of the intrinsic financial position of the country. India was to have only a sterling exchange standard and was to be denied a gold standard because it did not suit others that foreign balances in her currency reserves should be converted into gold. It rather suited those other interests that such balances should be kept in the form of foreign Treasury Bills. India was not to have her choice in favour of a lower ratio but must needs put up with such artificial exchange values for her currency as 2s. and 1s. 6d., just because higher ratios suited foreign manufacturers to command an easier market in India. India was not to take the fullest advantage of a situation in which she could have utilised the substantial favourable trade balance for the wiping out of her external obligations mainly because any such plans in this behalf did not suit the financial policy and operations of the British Treasury. India's trade, industries, currency system and ratio of her currency for international exchange purposes were, all the time and every time, subordinated to foreign interests".

Mr. Rangaswami contrasted America's transformation, during the war period, from a debtor country to a creditor country with the failure on the part of India to effect a like transformation. That India could have achieved a result as favourable as America's and that it was the wrong financial and exchange policy that prevented India from taking advantage of the situation, is fully brought out in the following passage :

> "A process of currency and exchange manipulation was adopted with a view to wipe out the enormous claims of India for war supplies. Firstly, silver was acquired at absurdly high prices and a gratuitous present made to American producers of silver. Emphasis was laid on the internal convertibility of the note into rupees instead of on the maintenance of the integrity of the international convertibility of the currency. The most inexcusable of these operations was the triangular operation of the British Government between New York, London and India, the taking over of the dollar claims of India against the delivery of sterling and the liquidation of these sterling resources at what, in effect, amounts to absurdly high valuation of the rupee. As a result of this reckless policy, India found herself a supplicant and was denied all her claims to resources in the international centres".

India had a like chance again in 1924-26 to create for herself substantial foreign balances and utilise such balances for the repayment of external obligations. India, in fact, could have done exactly what France did under the adroit leadership of M. Poincaire. France depreciated her currency and created foreign balances of the order of £400 million with which she has created for herself a supreme position in international finance to-day. It was exchange and currency manipulations again that stood in the way of India securing the advantages which were her due. What is, therefore, needed now is an economic policy which would be entirely different from the policy hitherto pursued.

* * *

The pursuit of a national economic policy would mean that, in the first instance, a complete, comprehensive and intelligent survey be made of the various potentialities and possibilities both in agriculture and industry. After such a survey is made, wherever favourable results are assured, definite programmes should be laid down for the exploitation of these potentialities. For the execution of those programmes, the necessary organisation should be set up and the requisite capital should be provided. The work involved requires expert knowledge, broad outlook, wide experience and thorough earnestness. It is unthinkable that work of this nature can be carried out by the existing government departments as they are not trained to do such work. What is required is that a Supreme Economic Council should be inaugurated with the least possible delay. Such a council should be made up of real experts—men who have knowledge, experience, vision, outlook, driving force and sincerity. Mr. Rangaswami does not agree with Sir Arthur Salter's proposal for the establishment of economic

PROSPECTUS.

A copy of this Prospectus has been filed with the Registrar of Joint Stock Companies, Madras, for Registration under Section 92 of Act VII of 1913.

The Subscription List will be open on the 5th day of April, 1933, and will close on or before the 29th day of April, 1933.

Application will be made to the Committees of the Madras, Bombay and Calcutta Stock Exchanges for permission to deal in the shares of the Company and in due course for a quotation.

THE VIBRO PILING CO. (INDIA), LTD.

(Incorporated under the Indian Companies Act VII of 1913.)

AUTHORISED CAPITAL ... ... Rs. 5,00,000

Divided into 35,000 Ordinary Shares of Rs. 10 each and 15,000—7½% Cumulative Preference Shares of Rs. 10 each.

Present Issue. 15,000—7½ per cent. Cumulative Preference Shares of Rs. 10 each payable as follows:—
Rs. 5 on Application and Rs. 5 on Allotment.

The Preference Shares will be preferential as to Capital and Dividend over the Ordinary Shares.

It is intended to pay Dividends thereon half-yearly on 30th June and 31st December. The first dividend will, it is expected, be paid on the 30th June, 1933, and will be calculated at the rate of 7½ per cent., per annum on the nominal value from the date of allotment of Shares.

PROSPECTUS.

Objects of the Company:—The Company has been formed for the purposes set out in the Memorandum of Association and, in particular, with the object of working the Vibro Patent System of Casting Concrete Piling *in situ* throughout India, Burma and Ceylon. The Patent is the property of the British Steel Piling Co. Ltd., a Company incorporated in England, who granted the licence for working this Patent to The General Construction Co. Ltd., for Madras and Bombay Presidencies and to Messrs. John King & Co. Ltd., for the Bengal Presidency and who have agreed to transfer the licence to the Company for the operation of this patent concrete piling system in the territories specified.

The Vibro Patent System of Casting Concrete Piling *in situ* is now in general use for the purposes of providing stable foundations for heavy structures such as bridges, buildings, etc., in soils where ordinary forms of foundation are impracticable and uneconomical. Large areas of unsatisfactory soils are to be found all over India particularly in the delta districts and in reclaimed territories. This class of piling has very largely superseded many of the older forms of piling such as timber piles, pre-cast piling, etc.

Owing to the enormous increase in the use of the Vibro Patent System during the past few years and the future unlimited possibilities for this type of work in this country, it has been decided to consolidate the operations of Vibro Piling interests by the formation of a separate Company to deal exclusively with this class of specialised engineering, and the Directors of the British Steel Piling Co. Ltd., who unreservedly support the flotation, have agreed as from the 1st January 1933 to the transfer of the licences to the Company from the two Licensees who have hitherto carried out Vibro operations in India.

The average number of lineal feet for the past 3 years piled by this Patent System is approximately 100,000 per annum, and the Directors estimate with confidence that not less than this average will be maintained. Past experience and figures show that the nett profit on each lineal foot piled has not been less than Eight Annas, and taking the basis of 100,000 feet per annum, the result of the Company's working should show a minimum profit of Rs. 50,000. The Preference Dividend will absorb Rs. 11,250 per annum and therefore on this estimate the Preference Dividend is amply covered.

The new Company commences operations under the following most favourable conditions:—

1. The Vibro Patent System has already established an excellent reputation in this country and consequently little or no outlay will be required for propaganda purposes. This reputation has been gained in spite of the fact that operations have been carried out by isolated and largely local interests. The consolidation of these interests, the name of THE VIBRO PILING COMPANY (INDIA) LIMITED and the extensive territory as yet unexploited should certainly be a considerable asset and result in much greater activities.
2. The Company has been able to take over all the Vibro Plant in this country at very advantageous rates from the two licensees who have hitherto carried on the Vibro operations in India. The whole of the Plant has been recently overhauled and will be transferred to the new Company in first class working condition.
3. The Company commences with three established branches, and as the management will be run in conjunction with The General Construction Co. Ltd., in Madras and Bombay, and John King & Co., Ltd., in Calcutta, administrative expenses will be reduced to the lowest figure possible.
4. The Directors include three Directors of The General Construction Co., Ltd., two of whom are also the Directors of The British Steel Piling Co., Ltd., one Director of John King & Co., Ltd., and one Director of the British Steel Piling Co. (India), Ltd., which ensures the continuance of the high standard of work already carried out in Vibro operations in this country.

The purchase consideration is Rs. 3,50,000 made up as under:—

Goodwill	...	Rs. 2,00,000-0-0
Plant and Machinery	...	Rs. 1,50,000-0-0
		Rs. 3,50,000-0-0

which will be liquidated by the issue of 35,000 Ordinary Shares of Rs. 10 each, and the fact that the vendors have agreed to accept the whole of the purchase price in shares and are receiving no cash is a sufficient indication of their confidence in the Company's success.

The purpose of this issue is to provide necessary Working Capital.

The Company will pay all Preliminary Expenses relating to the formation of the Company including all expenses connected with this issue of shares.

The Preliminary Expenses of the Company are estimated to amount to Rs. 5,000.

The following contracts have been entered into:—

1. Dated 1st March, 1933, between The General Construction Co., Ltd., of the one part, and this Company of the other part.
2. Dated 1st March, 1933, between John King & Co., Ltd., of the one part, and this Company of the other part.
3. Dated 1st January, 1933, between The British Steel Piling Co., Ltd., of the one part, and this Company of the other part.

PROSPECTUS—*Contd.*

Mr. C. Newman-Sanders is interested in the sale as a Director of The General Construction Co., Ltd.

Mr. Edward Le Bas is interested in the sale as a Director of The General Construction Co., Ltd., and also as a Director of The British Steel Piling Co., Ltd.

Mr. H. T. Garvie is interested in the sale as a Director of The General Construction Co., Ltd., and also as a Director of The British Steel Piling Co., Ltd.

Mr. Jas. S. Young is interested in the sale as a Director of John King & Co., Ltd.

The Articles of Association provide as follows:—

The qualification of every Director shall be the holding in his own right of shares in the Company of at least fifty Ordinary Shares. The Directors respectively shall be entitled to be repaid out of the funds of the Company all personal expenses incurred in or about the business of the Company and in addition thereto, each of the first Directors until the Company in General Meeting fixes some other rate of remuneration shall be paid for his remuneration out of the funds of the Company a fee of Rs. 25 for each meeting of the Directors attended by him.

4. The minimum subscription of shares upon which the Company may proceed to allotment is Seven Shares.

Preference Shareholders will not have the right to be present at or to vote at any Shareholders' Meeting of the Company unless Preference Dividends are six months or more in arrears. Should the Company be six months or more in arrears in payment of the Preference Dividend, the Preference Shareholders shall be entitled to be present at any Shareholders' Meeting of the Company and shall have equal voting rights with the Ordinary Shareholders, namely: On a show of hands each member present in person shall have one vote and on a poll each member present in person or by proxy shall have one vote for each Ordinary Share held by him and one vote for each Preference Share held by him.

The Company will pay a brokerage of one per cent. on all allotments made in respect of applications bearing recognised Brokers' stamps. Application for shares should be made on the enclosed form with a remittance of Rs. 5 for each share applied for.

If no allotment is made, the application money will be returned in full and where the number of shares allotted is less than the number applied for, the surplus will be credited in reduction of the amount payable on allotment and the balance, if any, will be returned to the applicant. The Directors reserve the right to refuse any application without assigning any reason.

Prospectuses and Forms of Application may be obtained from the following:—The Mercantile Bank of India, Ltd., at Madras, Bombay and Calcutta; Messrs. Maconochie & Co., Mercantile Bank Buildings, Madras; and the offices of the Company in Madras, Bombay and Calcutta.

Madras, April, 1933.

---

councils in India somewhat on the German type. He favours the creation of a council on the lines of what Russia has established.

* * *

By way of concrete suggestions which a council of that kind would be able to consider and, possibly, give practical effect to, Mr. Rangaswami examines the problems of the province of Bengal and puts forward two definite schemes:

> "The first is the establishment of a jute corporation, whose business would be to do all that is possible to help the jute growers to secure a reasonable price for commodity. Such a corporation will have to establish warehouses in the jute districts, perfect a system of co-operative banking, make funds available, through the latter, to the growers so as to help them to hold over stocks in periods of falling prices, maintain a research department and a statistical department, disseminate information as regards the area to be brought under crop etc., and otherwise leave nothing undone whereby Bengal can make out of a 100 per cent. monopoly as much as she ought to. A corporation on these lines would require capital. The Government can levy a small cess on all jute arrivals from districts; and on the basis of this cess, a public loan for Rs. 10 crores or so should be issued.
>
> Another scheme that is worth consideration is the establishment of a huge generating plant for electricity in Raneegunge, a plant so huge that it would supply the entire province with power. An outlay of Rs. 10 crores should suffice for a power scheme of this magnitude. But the entire province will be assured of cheap and clean power for domestic and industrial uses. Above all, coal which is now commanding but a poor market will have a new lease of life assured to it. The increase in the national wealth of the province by this means would be that coal properties, which in many cases are now valueless, would become assets of great value.

Economist after economist has, in recent months, emphasised that considerable expansion of currency and credit is essential through all the countries of the world; and that only by this means will world trade be able to show any striking increase. If the Governments on their part agree to such inflation, the problem still remains as to how the additional currency is to be made to filter down to the masses. Mr. Rangaswami suggests that it is only schemes like the jute corporation and the electricity corporation that could make available to the vast population the benefits of increased currency and credit. Both these schemes would come under the category of public works expenditure on which Professor Keynes has laid great stress.

THE TRITON INSURANCE CO., LTD.

The balance-sheet of the Triton Insurance Company, Ltd., as at December 31, 1932 is a highly satisfactory document and bears eloquent testimony to the deservedly high reputation and credit the company enjoys in the insurance world. The salient features of the balance-sheet are as follows. The net premium income for the year, after deduction of reinsurance, amounted to Rs. 6,51,811; claims paid and outstanding were Rs. 2,73,341, while commission and expenses amounted to Rs. 3,34,520. The underwriting profit, without taking into account interest on underwriting funds which is merged with interest on the general funds, was Rs. 43,950. Interest on investments was responsible for a credit to the revenue account of Rs. 2,18,389.

The underwriting suspense account appearing in the balance-sheet is the equivalent of the departmental funds maintained by other insurance companies. This account was charged, in the year under review, with claims on account of policies issued in 1931 and preceding years to the extent of Rs. 24,029 and a sum of Rs. 20,000 was released owing to the fall in premium income of approximately Rs. 40,000. The net profit for the year, after taking into consideration the sum of Rs. 76,111 brought forward from the previous year's account, amounted to Rs. 3,25,264, out of which a dividend of 40 per cent. absorbing Rs. 2,30,000 has been declared and the balance carried forward has been increased to Rs. 95,264.

The finances of the company are exceptionally strong and liquid. Apart from the capital of Rs. 5,75,000 there are underwriting reserves of Rs. 4,10,000. There are free reserves of no less than Rs. 34,25,000. In addition, there is a hidden reserve of Rs. 3,68,000 in the form of the difference between the market value and book value of investments. The funds of the company which aggregate Rs. 47,35,000 are invested exclusively in government securities, the bulk of which are of medium maturity.

The company's accounts are drawn up on the Far Eastern model and does not conform to the British system of departmental accounts and departmental funds. It is evident from the existence of the succulent fund and the method of debiting previous year's claims to the suspense account that the underwriting account comprises fire, marine and accident business though it is impossible to gauge the relative importance of each class.

In view of the exceptionally strong reserves built up in the past, the company during the last two years has not transferred any further amounts from profit and loss account to the reserve account. On the contrary the underwriting suspense account has been reduced from Rs. 4,34,000 on December 31, 1930 to Rs. 3,10,000 at December 31, 1932. This is however, partly in the nature of an adjustment of premium reserves and partly a withdrawal to strengthen the revenue accounts to meet the incidence of increased taxation.

I have had, altogether, an arduous week. As I write these lines, I am afflicted with a brain fag, which I may also describe as an utter vacuity of ideas and an inertia so great that even to gossip or to listen to gossip were a painful effort. Yet, this column must needs be kept, thanks to the whims of advertisers whose contracts insist on positions on the right or the left, on the top or the bottom, of Clive Street Gossip section. The Calcutta University did me the great honour of inviting me to deliver Readership lectures on "Indian Finance in relation to World Finance." It was over thirty months ago that Mr. Charu C. Biswas approached me on this matter; and, in an unguarded moment, I gave my assent. Mr. Shyama Prasad Mukerjee was equally keen on my agreeing to the Readership appointment. And, so, with Charu's group and Shyama Prasad's group concurring in the proposal; and with Sir Jehangir Coyajee and Dr. Paramatha Nath Banerjee welcoming it, the resolution appointing me a Reader was passed, unanimously, more than two years ago. They all did their part with alacrity. But I was the sluggard. I kept putting off the task time after time, till those who aspired to the Readership in the next turn came to feel that I was blocking the way.

* * *

I had, therefore, to be done with the lectures; and realising my own shortcomings, I concluded that only after the definite dates were fixed up, I could be spurred to needful preparation. I sent word to the Vice-Chancellor, Sir Hassan Suhrawardy, through Dr. Nemenyi that I would make myself ready as soon as I was informed of the date fixtures. I received intimation last mid-week, that Monday, Tuesday and Wednesday were suitable. Well, I addressed myself to the work as from Sunday noon. And in three days I had to get ready the three addresses. Only as I went ahead with my task did I realise what a stupendous "job" I had taken on. The matter of the speeches would occupy fifty columns of *Indian Finance*. When they are published in book form, as the Calcutta University will be doing in due course, it will be a brochure of over 120 pages. The very plan of the work had to be prepared only after Sunday; then, there was the gathering of the relevant data, the dictating for hours and hours, the correction of the transcribed copies, and the final ordeal of delivering Mss. speeches. Of all these phases of my toil, that pertaining to Mss. eloquence was most irksome. I am not, at all times, much of an impressive figure on a public platform. But, where I had to trust to the urge of the moment and the inspiration of an appreciative audience, I had, on most occasions, acquitted myself tolerably creditably. Reading from a typed copy looks decidedly farcical. It was, in my case, a strain, due to my defective vision. I was, therefore, vastly relieved to be done with this over-due obligation. I breathed freely as I walked out of the lecture hall on Wednesday evening. But I am a victim, to-day, to the fatigue of a responsible work and a trying ordeal.

I dealt with my theme under three heads:

1. Salient features of Indian finance.

2. Survey of International finance from the pre-war era up to date.

3. Relationship of Indian finance to International finance. The first address is an exposition, the second a description; and the third a commentary.

* * *

In my first address, I present, in the shortest compass and in the simplest terms, the succinct features of Indian finance, with a view that even a novice in these matters may be able to follow, in some intelligent way, the happenings in the financial world and may be induced to take a more live interest in contemporary events, most of which tend to be, in to-day's conditions of world affairs, directly or indirectly, proximately or remotely, connected with some aspect or other of economics or finance. Nothing, in fact, would seem to happen which has not a bearing on economic problems or which does not lead to repercussions in the economic world. If the Prince of Wales opens the Olympic show and buys a Hush Hash Typewriting machine, up may go the shares of Hush Hash Corporation Limited. If the Rt. Hon. Montagu Norman has a slight breeze with his newly wedded wife on Wednesday evening, up may go the Bank of England rate on Thursday. If Sir Osborne Smith fares ill with his horse, Corespondent, on Saturday's races, he might not be in an expansive mood in respect of the loan applications to be disposed of on Monday. If Dr. Ansari uses Moira soap and Mrs. Motilal Nehru recommends, from personal use, Moira Cream, retail dealers may start stocking Moira products in large quantities. In the days of the Irwin-Gandhi Pact, the business community, who were gathered in considerable numbers in Delhi, were wont to watch the smile or frown on the Mahatma's face as he returned from the Viceroy's house. If a smile, the markets would turn bullish; if a frown, the prices collapsed. A hundred per cent. political happening connected with a hundred per cent. political head of the administration and a hundred per cent. political agitator was swaying the commercial world for days and days.

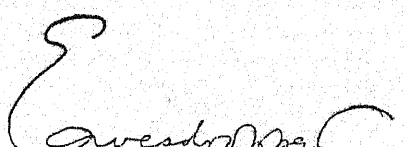
The statesman in world affairs is receding into the background; the Governor of the Central Bank occupies all the foreground of the picture. The politician shows but in a dim light by the side of the resplendent financier and economist. Who is the most powerful factor in Britain—Mr. Ramsay MacDonald or Mr. Montagu Norman? Who carries the largest influence in India—Sir Hari Singh Gour or Sir Purshottamdas Thakurdas? Writers on economic questions like Paul Einzig have found it worth the while to be as prolific as Charles Garvice or Edgar Wallace. The world has come to realise that the old-time ignorance of financial matters won't do in present-day conditions. Even the *News of the World* devotes space to the comments of its City Editor in addition to the coups on love and intrigue and sensationalism. There is greater thirst for knowledge on economics. The layman has come to be curious and asks for enlightenment. He wants to know why silver goes down one day and gold shoots up another day. What is all this talk about the ratio, reverse councils, *adhoc* securities, sterling exchange standard, linking of rupee to sterling, contraction? He hears these words used in season and out of season. Where may he get an exposition of these and other topics in a way that he, a layman, can understand it without any special effort or undue strain?—I have had this question put to me by umpteen readers. "Can't you write a series in your journal, the purpose of which would be to educate the lay reader on the mysteries and intricacies of high finance"—this is a request I have received from many quarters.

I started such a series over four years ago; and, if I remember right, the series came to an abrupt end with the third article. To write erudite and learned stuff is far easier than the attempt to put oneself in the place of a reader who does not know the very rudiments of the subject. To expound A to Z in terms that can be understood by one ignorant of the very A. B. C. is the task I had set to myself in the plan of the first of the Readership lectures. I start with the assumption that the reader is altogether a stranger to the study of economics; from this assumption I proceed to state the first principles in the simplest language and explain the structure of the money, giltedge, exchange and capital markets; to describe the Paper Currency Reerve (together with *adhoc* securities, and expansion or contraction), Gold Standard Reserve, Ratio, Standard, Reserve Bank, Treasury Bills, Council Bills, Reverse Councils etc, etc. I am endeavouring to arrange with the University for copies of the lectures to be available at concession rates to my readers, who will do well to let me know if they require to be included in the concession.

After all, I have not done badly on a day of brain-fag. At the start, I intended to discourse on brain-fag and offer to-day's gossip as an illustration. I now find that I have ended in a note, worthy of the best live-wire super-salesman.



P. & O. and BRITISH INDIA COMPANIES

(INCORPORATED IN ENGLAND).

Total	...	7,26,956	Total	...	7,26,956

Extracts from Directors' Report:

Report for the year ended 31st December, 1932, shows a loss on Revenue Account of Rs. 51,012-1-1, Less—Adjustment Rs. 12-9-1, balance Rs. 50,999-8-0. Add—Balance at debit brought forward from season 1931, Rs. 1,21,551-6, Cost of Machinery 10,239-9-3, total Rs. 1,31,790-15-3, leaving a balance at debit of Rs. 1,82,790-7-3 to be carried forward to next account.

The outturn for the year was 7,214 maunds as compared with an estimate of 7,500 maunds and a crop in 1931 to 8,238 maunds. The crop shortage was due to drought at the commencement of the season, followed by conditions unfavourable to growth. The major portion of the crop was sold and realised an average price of As. 5-4 per lb. against As. 6-3 per lb. in 1931. The estimate for season 1933 provides for a crop of 7,500 maunds to cost Rs. 2,38,839 subject to modification in the event of restriction of exports and crop being agreed to by the Industry.—Begg Dunlop & Co., Ld., Managing Agents.

			Profit & Loss	...	28,519
Total	...	65,99,310	Total	...	65,99,310

Extracts from Directors' Report:

Report for the year ended 31st December, 1932. The working during the period under review resulted as follows:—Mill Loss Rs. 1,42,851-12-2, land and buildings, net revenue Rs. 1,24,304-13-1, deduct, amount of Managing Agents' Commission Rs. 4,972-3-0, leaving the balance Rs. 1,19,332-10-1, net loss Rs. 23,519-2-1. Your Directors propose to wipe off this amount by transferring a like amount from the Reserve Fund.

As will be seen from the Balance Sheet, further capital expenditure was incurred on machinery in order to keep it up to date, one Sizing Machine and 12 Looms of 64 inches being amongst other machinery which was installed during the year.

The net yield from the Company's Buildings shows a decrease from the previous year owing to the reduction in rents of flats which came into force from the 1st September, 1932. The Company's property, including Building, Machinery and Stock, has been insured for Rs. 71,52,120 and the Profits and Standing Charges of the Company have been insured for Rs. 9,25,000 to cover a maximum stoppage of 24 months, such insurance to run from the 3rd January, 1933, to the 2nd anuary, 1934.

		Live Stocks ...	96,000
		Outstandings ...	1,06,602
		Cash & Deposits ...	11,382
		Profit & Loss ...	1,06,317
Total ...	20,63,098	Total ...	20,63,098

Extracts from Directors' Report:

Report for the year ended 30th September, 1932. The Revenue Account shows a credit balance of Rs. 2,379-3, and the Profit and Loss Account, after sundry adjustments, a loss of Rs. 3,819-2-2, to which must be added a loss of Rs. 1,02,497-11-11 carried forward from last year, making a total loss of Rs. 1,06,316-14-1 to be carried forward.

The Managing Agents have again foregone their agency allowance and interest on their current loan, the Debenture-holders have also foregone the interest and the Directors have foregone their fees. During the year it was found necessary to close the Meckla Mills owing to the falling away of the demand for the country shook tea box and the drop in prices in Calcutta for packing planks and packing cases. The sale of 3-ply tea chests for 1933 has been satisfactory in number, and new accounts have been opened, but the prosperity of the Company in the future is largely dependent on better prices.

BOMBAY INDUSTRIAL MILLS CO., LD.

Synopsis of Balance Sheet:

		Cash ...	791
		Profit & Loss ...	8,85,997
Total ..	33,06,950	Total ...	33,06,950

Extracts from Directors' Report:

Accounts for the year ended 31st December, 1932, show a net loss of Rs. 2,20,534-5-8, which amount is to be carried forward to next year.

In view of the adverse balances appearing in the Profit and Loss Account, the Managing Agents have agreed to forego the interest on their current Loan Account amounting to Rs. 29,662-1-9 for the 12 months ended December, 1932, together with their minimum commission of Rs. 36,000 a year. The holders of the 470 Debentures outstanding in your Company, owing to trade depression, agreed to forego the whole of the interest due to them on these outstanding Debentures from the 1st of October, 1932, until the end of the year. The Company's property, including Buildings, Machinery and Stock, has been insured for Rs. 23,61,800. The Standing Charges of the Company have also been insured against fire, riot and civil commotion for Rs. 2,00,000, such insurances to run from the 3rd January, 1933, to the 2nd January, 1934.

DEJOO VALLEY CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	1,20,000	Block ...	1,47,505
Reserves ...	15,000	Crop A/c. ...	6,627
Debts ...	84,163	Outstandings ...	3,635
		Cash ...	341
		Profit & Loss ...	61,055
Total ...	2,19,163	Total ...	2,19,163

Extracts from Directors' Report:

Report for the year ended 31st December, 1932, showing a loss on Revenue Account of Rs. 27,163-0-11, Add—Balance at debit brought forward Rs. 33,894-2-3, making a total of Rs. 61,057-3-2. Less—Adjustment Re. 1-14-3, leaving a balance at debit of Rs. 61,055-4-11 to be carried forward to next account.

The outturn for the year was 1,308 maunds compared with an estimate of 1,800 maunds and a crop in 1931 of 1,837 maunds. The crop shortage was due to drought at the commencement of the season, followed by excessive rain and unusually low temperature at the height of the plucking season. Rainfall for the year was 26 inches in excess. The crop was sold in Calcutta and realised an average price of As. 5-1 per lb. against As. 6-5 per lb. in 1931 The estimate for 1933 provides for a crop of 1,800 maunds to cost Rs. 64,728-13-3 subject to modification in the event of restriction of exports being agreed to by the Industry.—Begg Dunlop & Co., Ld., Managing Agents.

		Cash & Invests. ...	4,83,200
		Profit & Loss ...	24,613
Total ...	15,48,538	Total ...	15,48,538

Extracts from Directors' Report:

Report for the year ended 30th November, 1932.

As will be seen from the Accounts the net loss brought down from the Profit and Loss Account is Rs. 24,614-3-11, without making any provision for depreciation, which balance it is proposed to carry forward to the next year's Accounts. Your Directors have taken every possible action to conserve to the utmost the financial reserves of the Company, and upkeep and maintenance charges have been reduced to a minimum. Taking into consideration the liquid reserves of the Company which have been built up during boom periods they have decided to recommend the payment of a dividend at the rate of five per cent., free of Income Tax, out of the Equalization of Dividend Fund.

		Cash ...	5,18,557
Total ...	34,19,324	Total ...	34,19,324

Extracts from Directors' Report:

Report for the year 1932. The result of the year's working after providing the usual depreciation, and meeting other expenses of the Company, is a profit of Rs. 4,83,026-6-9. There was also a balance of Rs. 2,071-8, brought forward from last year, making in all a sum of Rs. 4,85,097-14-9. Of this, Rs. 1,07,500 was absorbed by payment of a half-yearly dividend to 30th June, 1932, of 3½ per cent., free of tax, on the Preference "A" Shares and 5 per cent., free of tax, on the Ordinary Shares, also a bonus of 5 per cent., free of tax, on the Ordinary Shares. The Directors now recommend a final distribution of 3½ per cent., free of tax, on the Preference "A" Shares, making a total dividend for the year of 7 per cent. This will absorb Rs. 24,500. The Directors also recommend a final dividend of 5 per cent., free of tax, on the Ordinary Shares, in addition a final bonus of 10 per cent., free of tax, on the Ordinary Shares. These payments will absorb Rs. 1,24,500. The Directors recommend a transfer of Rs. 2,00,000 to Factory Modernization Reserve Account. There will then remain a sum of Rs. 28,597-14-9 to be carried forward to next year.

INDIAN CEMENT CO., LD.

Synopsis of Balance Sheet:

		Investments ...	28,47,858
		Cash & Deposits ...	98,082
Total ...	49,28,525	Total ...	49,28,514

Extracts from Directors' Report:

Report for the year ending 31st December, 1932, shows a profit of Rs. 3,19,820-3-1 for the year. To the above amount has to be added Rs. 24,693-13-3 brought forward from last year's account making a total of Rs. 3,44,514-5-4, out of which the following sums amounting to Rs. 1,51,000 have been appropriated:—To Depreciation Rs. 85,000, to Investment Reserve Fund Rs. 60,000, to Bonus to Staff Rs. 6,000, total Rs. 1,51,000, which leaves a balance of Rs. 1,93,514-5-4. From this, the Directors recommend payment of a Dividend for the year ending 31st December, 1932, of Rs. 12-8 per share free of income-tax, *i.e.*, at the rate of 5 per cent. per annum which will absorb Rs. 1,89,825 leaving a balance of Rs. 3,689-5-4 to be carried forward to next year's account.

Owing to continued depression in trade, the Company's Factory has been placed on partial working by the Cement Marketing Co. of India, Ld., from 1st May, 1932. During the year under report, the Directors resolved, in the general interests of the Industry, to enter into a fresh Agreement with the Cement Marketing Co. of India, Ld., for a period of 7 years from the 1st April, 1933. This Agreement has been duly completed. Tata Sons, Ld., Agents.

NEW CITY OF BOMBAY MANUFACTURING CO., LD.

Total ...	37,44,102	Total ...	37,44,102

Extracts from Directors' Report:

Report for the year ended 31st December, 1932, shows a loss on the year's workings of Rs. 26,201-6-10 which amount will be carried forward to next year's accounts.

In view of the difficult year's trading experienced, the Managing Agents voluntarily agreed to forego half the interest they were entitled to on the amounts they had advanced to the Company, the sum given up by them being Rs. 31,662-15-3. The Company's property, including Buildings, Machinery and Stocks, has been insured against fire, riot and civil commotion for Rs. 48,83,850. Profits and Standing Charges of the Company have been insured for Rs. 10,00,000 to cover a maximum stoppage of 24 months, such insurance to run from the 3rd day of January, 1933, to 2nd January, 1934.

STANDARD LIFE ASSURANCE CO.

The report states that the total new business effected during the year ended 15th November, amounted to £3,970,506. In addition, immediate annuities were granted for £120,625 per annum net. The premium revenue on the new business was £412,302 and the net purchase price for the immediate annuities was £1,291,931. The annual investigation shows that the surplus available after supplementing the general reserve and inner reserve was £352,746. In respect of policies existing on 15th November, 1932, on which all premiums due have been paid, the directors have declared under the ordinary reversionary bonus series a compound reversionary bonus of 24s. per cent. calculated on the sums assured and existing bonuses, and have declared appropriate bonuses under the minimum premium with profit series and other schemes. These bonuses absorb £322,440, leaving £30,306 to be carried forward.

(*Continued from page 590.*)

new scale of expenses calculated on the basis of capacity of the people to pay. When a businessman like Mr. Chokhany belonging to the extreme moderate section, has such strong comments to make on the financial position, it behoves the Government to lend ear to the Indian side of public opinion.

Exchange was quiet but with a somewhat steady undertone. On the weekly sterling tender day, applications for £1,215,000 were received and allotted on the basis of 1s. 6 1/16d.

The closing rates are: 1s. 6 1/32d. for April T.T.; 1s. 6d. September T.T.; and 1s. 5 31/32d. October-December T.T.

Bills may be quoted: 1s. 6⅛d. April to August; 1s. 6 3/32d. September to December.

Call money has been less firm. Business was done up to 1½ per cent. Union rates for interbank, three days' notice and seven days' notice money is ¾ per cent. One month, two month and three months are quoted 1 per cent., 1 per cent. and 1¼ per cent. respectively.

MERCANTILE BANK OF INDIA, LD.

Report for the year ending 31st December, 1932. The profits for the year amount to £179,808 14s. 5d. and the balance available, after adding £167,926 17s. 3d. brought forward from last Account, is £347,735 11s. 8d. From this sum has to be deducted £63,000 being the Interim Dividend of 6 per cent., less Income Tax, on the "A," "B" and "C" Shares paid in September last. The Directors have added £25,000 to the Reserve Fund (raising it to £1,075,000), £15,000 to the Officers' Pension Fund, and written £10,000 off Freehold Banking Premises. They now recommend a Final Dividend on the "A," "B" and "C" Shares of 6 per cent., less Income Tax (making 12 per cent. for the year), leaving a balance of £171,735 11s. 8d. to be carried forward.

HONGKONG AND SHANGHAI BANKING CORPN.

Report for the year ending 31st December, 1932. The net profits for the year, together with $3,421,511.15, balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts and contingencies, amount to $20,315,231.74. The Directors recommend writing off Bank Premises Account the sum of $1,500,000.

After making this transfer, deducting the Interim Dividend of £3 per share, paid on 8th August last, *viz.*:—£480,000 at 1/3⅛=$7,616,528.93, and remuneration to Directors, there remains for appropriation $11,119,033.39, out of which the Directors recommend the payment of a Final Dividend of £3 per Share, *viz.*, £480,000 which, at 1/3, the rate of the day, will absorb $7,680,000. The Balance $3,439,033.39 to be carried to New Profit and Loss Account. The Sterling equivalents of the Assets and Liabilities are shown at 1/3, the rate ruling on the last day of the year.

Extracts from Directors' Report:

Report for the year ended 31st December, 1932. No change has been made in the issued Share Capital. The whole of the Authorised Share Capital has been issued. 5 per cent. Debenture Stock created and issued to 31st December, 1932, is £300,000.

Negotiations were concluded towards the end of the year under review for the purchase of a freehold riverine property of over 20 acres in extent, adjoining the Company's Electric Power Station. It is proposed to gradually transfer the Company's various transport depots, constructional departments and housing of employees, now on leased properties, to the newly acquired site.

The gross profits for the year were £144,303-0-7, *Add* Transfer Fees, Interest on Deposits and Investments in London and Rangoon £10,221-10-3, total £154,524-10-10. *Deduct*—Interest on Debenture Stock £15,000, Depreciation on Sundry Assets £8,239-19, transfer to Reserve for Renewals Account £50,450, Income Tax £14,069-9-7, Fees of Directors £1,113-17-9, Fees of Trustees for the Debenture Holders and Expenses in London £1,758-7-10, Employees' Provident Fund and Bonus £5,526-8-11, total £96,158-3-1, amount of Nett Profit carried to Balance Sheet £58,366-7-9, *Add* amount brought forward from last year £28,842-10-3, total £87,208-18. *Deduct*—Preference Dividend to 31st December, 1932, £15,000, interim Dividend on 550,000 Ordinary Shares for the year 1932, paid on 31st October, 1932, £13,750, total £28,750, leaving a balance of £58,458-18. An Interim Dividend of 6 annas per Share free of Indian Income Tax was paid on 31st October, 1932, amounting to £13,750 and the Directors now recommend the payment of a Final Dividend of fourteen annas per share free of Indian Income Tax which will absorb £32,083-6-8, leaving a sum of £26,375-11-4 to be carried forward to the current year's Account.

DAWN MILLS CO., LD.

Synopsis of Balance Sheet:

LIABILITIES.	Rs.	ASSETS.	Rs.
Capital ...	8,00,000	Block (nett) ..	24,82,039
Reserves ...	28,61,770	Cotton ...	4,68,119
Debts ...	4,30,117	Yarn Waste, etc. ...	1,97,113
Profit & Loss ...	1,07,330	Stores & Spares ...	78,922
		Outstandings ...	30,819
		Cash & Invests ...	9,42,205
Total ...	41,99,217	Total ...	41,99,217

Extracts from Directors' Report:

Report for the year ending 31st December, 1932, shows a net profit of Rs. 92,205-4. Add to this the sum brought over from the last year's account Rs. 8,094-10-1, and Refund of Income Tax received Rs. 7,035-9, there remains a total of Rs. 1,07,330-7-1. Your Directors propose to withdraw from the Reserve Fund a sum of Rs. 30,000 and after doing so, the amount available for disposal is Rs. 137,330-7-1, which your Directors recommend may be dealt with as under:—To Dividend at the rate of Rs. 20 per share on 3,200 shares, free of income tax, for the year Rs. 64,000, to Depreciation:—On Buildings Rs. 10,000, on Machinery Rs. 50,000, on Bleaching Machinery Rs. 3,000, on Electric Light Installation Rs. 2,000, on Sprinklers Rs. 2,000, on Fire Service Appliances Rs. 2,000, on Live and Rolling Stock Rs. 1,500, on Workmen's Compensation Fund Rs. 1,230 on amount carried forward Rs. 1,600-7-1, total Rs. 1,37,330-7-1. In view of the small profit made in the year your Agents have considerately given up their minimum commission of Rs. 15,000 to which they are entitled and hence no Agency Commission has been charged in the accounts for the year under review.

Despite the facts that all foreign markets are now practically closed and the state of the local textile industry is deplorable the working of the Mill shows a little profit, which the Directors hope, you will consider satisfactory. They, however, regret that in view of the profit being meagre they cannot see their way to recommend the payment of a bigger dividend. The Mill Buildings with the Machinery and Stocks of cotton, yarn, stores, etc., are insured against Fire, Riot and Civil Commotion risk to the extent of Rs. 52,74,900.

WORLD OF INDIAN FINANCE

Calcutta, April 12, 1933.

The continued flow of funds into the market from sterling purchases and maturities of Treasuries is having its effects on the conditions in the market. But money is still usable, as new funds are finding their way into government securities in spite of the increase in the resources of the market. Applications for Treasury Bills continued to be on the small side. During the week, the total applications for Treasury Bills amounted to only Rs. 76 lakhs against Maturities of Rs. 167 lakhs, so that the net inflow is very near Rs. 1 crore. It must be supposed that government securities continue to exercise great attraction as a form of short term investment; but it should be noted at the same time that the average rate of Treasury Bills has continued very low at the level of Rs. 1-3-0 per cent. as against Rs. 1-2-11 last week and Rs. 1-2-6 in the week previous. It will be seen that the position as regards Treasury Bills and the money market has been developing on the same lines as foreshadowed in these columns last week. The necessity of the Treasury retracing some of the steps by which the rates were brought down to as low a level as Rs. 1-2-6 per cent. was foreseen in these columns; and it was urged that the meagre amounts for which applications were received should open the eyes of the authorities and induce them to offer comparatively attractive rates of yield. The stage has not yet been reached when the rates for Treasury Bills are an effective counter-attraction to the rates obtainable in the market or to the possibilities indicated by the fall in giltedge prices since the end of last week. All the same the persistence which is noticeable in the rates for Treasury Bills is a significant feature and points to the attainment of an equilibrium between the forces at a different point. And this is to be welcomed as it is clear that, so long as the present state of flux continues, the market and the Government alike would be subject to surprises that are undesirable from the standpoint of both.

The large difference between the volume of Maturities of Treasury Bills and the amounts offered for reinvestment in the same can be explained only on the basis that the greater part of the difference between the two has found its way into Government securities. The course of giltedge prices during the last few days, too, has justified the anticipations made in regard thereto in these columns. Commenting on the policy of the Imperial Bank in unloading a part of its excessive holdings of giltedge on the market we suggested that there were two important considerations to be borne in mind. One was the relation of any sales tending to depress prices to the programme of conversion which the Government have undoubtedly on hand to-day. The other is the natural incapacity of the market to digest the large volume of new scrips especially on the eve of the settlement in the Bombay market. In that centre, a very marked deterioration in prices has been afoot since Saturday last. Operators had presumably based their calculations on the assumption that the Government would soon declare a new loan issue on a 3½ per cent. basis and that such declaration would have its natural effect in bringing up prices to the level at which the yields would be equalised. When, however, it was clear that no such announcement would be forthcoming till after the Easter holidays, a decline from the levels then ruling became inevitable. This tendency has been strengthened by other factors of no less importance. The approach of April 20 which is the settlement day for the giltedge market has naturally created a restiveness; and weak holders are trying to square up the position. So are those who operated merely against the chances of making a succulent profit made possible by the announcement of a new loan on a markedly low basis of interest. At the same time as the rise of these new factors, the London market also showed a pronounced fall in the prices of the Government of India's sterling securities. It would appear that in London, too, pronouncedly bearish influences had been at work.

The inevitable upshot of all this has been that 3½ per cent. Paper came down to Rs. 86 on Tuesday and 4 per cent. 1960-70 Loan was quoted at no better than Rs. 98-6. During all these upsets in the two principal scrips, the other issues were more or less wholly unaffected. And this points to the fact that despite all that has occurred during the last few days the undertone of the giltedge market as such continues to be quite sound and strong. In fact,

there is hardly any reason why it should be otherwise, considering that the fall in the prices of 3½ per cent. Paper and 4 per cent. 1960-70 are demonstrably due to causes which have little relation to the credit of the Government. That this view is not attributable to mere optimism will be recognised if it is noted that the closing on Tuesday was definitely and appreciably firmer. It is reported that the market which was dull during the day livened up towards the close; and there was a sudden emergence of buying enquiry for both the scrips. We have reasons to think that there is a certain class ready to buy for purposes of investment a large volume of government securities should prices show a fall.

Reference was made in these columns last week to the decision of the authorities of the Reichsbank to repay the credits extended to it in July 1931. It will be remembered that Germany was afforded at that time an international credit of 100 million dollars found in equal parts by France, Britain and the Bank for International Settlements. Of this amount only 70 million dollars was still outstanding; and it is now announced that 17½ million has been repaid to France. So that on this account France ceases to be a creditor of Germany. Prompt action in this regard is doubtless due to the return of Dr. Schacht to the headship of Germany's central banking institution. Dr. Schacht has too intimate an acquaintance of the ways of international conferences, in which France is a party, to allow Germany to continue in the position of a debtor to its historic enemy. Dr. Schacht has been closely associated with Herr Hitler even in the days in which the latter was regarded as a mere agitator; and the action now taken may be regarded as a sign that in the coming conferences Germany is not going to show any nervous or weak-kneed deference to France.

By all tokens, Mr. Roosevelt has completed the reclamation of American finances from the effects of the recent crisis and has now secured for himself freedom to turn his attention to conditions abroad. Considering the gravity of the situation, which developed its most critical phase on the day of his installation in the presidential office, it is a matter for congratulation that the President has within such a short time been able to retrieve the position. If we can judge by the energy with which he restored order in internal finances there is every certainty that Mr. Roosevelt will pursue his discussions with the heads of the other governments of the world with a hopefulness which is unknown to international economic conferences. It is reported that the heads of the French, Italian and German Governments have been invited verbally through the embassies to proceed to Washington to discuss world economic recovery. The other countries, namely Italy, Japan, China, Argentine, Brazil, Chile, Mexico and Canada, are to be represented by high officials. So far as England is concerned, Mr. Ramsay MacDonald is well-known to be anxious to proceed to America for this purpose and he has lost no time in fixing the date of his sailing. In France, M. Dealdier has approached M. Herriot to represent the country in the discussions at Washington. With the caution so characteristic of France it has been made clear that M. Herriot cannot commit the nation to any definite measures but that he is entrusted with the task of following the discussions and bringing home the materials necessary for the government to make a decision.

Considering the manner in which Mr. Roosevelt has set the stage for this preliminary world economic conference it seems that there would be more of earnest and sincere deliberation. For one thing, one fruitful source of friction has been eliminated with commendable wisdom. It was believed that in the invitations to these conferences Mr. Roosevelt would have to make a distinction between the countries who readily met their obligations in regard to war debts and those which decided to default without compunction. But as the event shows, such ideas have been abandoned probably at the last moment. It may be that Mr. Roosevelt has found in the revival of the proposal in France to pay the December instalment the means to keep up appearances. The tactics of France in this matter is characteristic. Not only has the private member's motion regarding the honouring of the war debts obligations been timed carefully but the person to represent the country has also been chosen with a similar carefulness. As the advocate of the payment of war debts, Mr. Herriot must command greater respect amongst American statesmen than any other French politician. From this, it is reasonable to assume that the discussions will be conducted in the proper spirit and that, if Mr. Roosevelt has really attractive proposals to make, they have every chance of ratification by the governments concerned. So far little or no detail is available about the plans of the American President. The only concrete proposal, of which there is mention in the cabled reports is a reduction of 10 per cent. in all import duties. The level to which import duties have risen during recent times is so high that a difference of 10 per cent. would represent no appreciable facility for the revival of international trade. But as a gesture it should have a marked effect and with the help of Mr. Ramsay MacDonald, who is an adept in the art of negotiation at conference and who is so keenly interested in a definite achievement, the prospects of the conference in America are indeed very encouraging.

The exchange market was dull and stagnant and there was nothing doing.

The closing rates are: 1s. 6 3/64d. April T.T.; 1s. 6 1/36d. June 15 T.T.; 1s. 6d. October T.T. and 1s. 5 31/32d. November-December T.T.

Bills may be quoted: 1s. 6⅛d. up to July and 1s. 6 3/32d. August-December.

Money was steady and call money was quoted 1¼ per cent. One month, two month and three months deposits may be quoted 1½ per cent., 1¾ per cent. and 1⅞ per cent. respectively.

(*Continued from page 633*)

tries on the gold standard and those desiring to return to it of a stipulated amount of silver up to a certain price and adding it to the reserves of central banks without necessarily fixing a definite ratio between silver and gold.

It will be seen that the main difficulty in any attempt to restrict the production of silver arises from its character as a by-product. Any scheme of restriction, therefore, to be effective would also require the limitation of the output of those metals the production of which adds to the world's stocks of silver. It is a fortunate circumstance that copper and other basic metals are suffering no less from over-production than other commodities, so that the curtailment of their output would serve the double purpose of not only increasing their own values but of facilitating improvement in the prices of silver. But with the world's experience of international conferences and the programmes agreed upon among them it is difficult to feel hopeful that the attempt to restrict the production of silver with its ramifications extending to other metals would ever prove an adequate success.

The other quarter from which silver is now assured of support is the General Committee of the Federation of Master Cotton Spinners of Manchester. This body has recently advocated early international action suggesting that thhe price should be stabilised at a minimum of 2 shillings an ounce and that its ratio to gold accordingly raised to 20 to 1. The object of Lancashire in pleading for a higher price for silver is too obvious to need any lengthy explanation. For the search for new and more forlorn hopes, the British cotton mill industry is proving an adept.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

FINANCE ABROAD,

To the threat of Germany being forced off the gold standard, only a brief reference could be made in these columns last week. Not much need be said to prove the significance of another defection to the gold standard this time from Germany. According to the original report, the danger arises from the decision of the authorities of the Reichstag to repay the £14 million of credit extended to it by the Bank for International Settlements. If such action were taken, its immediate result would be a marked fall in the reserve ratio of the Reichsbank, and no central banking authority could persuade itself that, in the disturbed conditions which have ruled in international finance for a long time, the creditors of Germany or even the holders of German currency would regard the mark with the same feeling of confidence as before. To assess exactly the effects of the repayment of such a large volume of foreign credits, it is necessary to examine the latest figures to hand bearing on the position of the Reichsbank. According to the returns of March 23, 1933, the gold bullion of the Bank amounted to RM. 727,356,000. To this has to be added the amount of RM. 66,365,000 of gold held abroad but not pledged against any specific liabilities. The ratio of gold to notes would, on this basis, work out to 22.75 per cent. If the foreign currencies reserve of RM. 121,948,000 be also taken into account the ratio of gold and *devisen* to the total note circulation would be better at 26.6 per cent.

It will be seen what a big hole the payment of £14 million in gold would make in the reserve position of the Reichsbank. But it is, at the same time, incumbent on us to point out that Germany is not exposed in the same manner as was Great Britain in 1931 or America in 1932 to any large withdrawals of credits. In spite of the numerous strains to which Germany's national finance has been subjected during recent years, the country has, on the whole, been able to preserve a fair balance of payments. Thanks to the Lausanne Settlement of reparations, the large payments on this account have not had to be paid for a long time. In the same way, a similar relief has been afforded to Germany in spite of a large volume of short term credits which she had obtained in the days following the formulation of the Dawes Plan. It will be remembered that close on the declaration of moratorium by Mr. Hoover, a Seven Power Conference was convened in London which emphasised that a matter of far greater importance to international finance than the payment of reparations and war debts was an enquiry into the position of Germany's short term credits.

A Committee which undertook that enquiry ultimately led to, what is still known as, the Standstill Agreement. It was at first concluded for a period of six months ending with February 28, 1932. In the opening months of that year, the Agreement was extended for a period of one year and only recently was it given another lease of life extending to February 28, 1934. The terms of the new Standstill Agreement are, if anything, more favourable to Germany than the previous one. It may, therefore, be taken that the Standstill Agreement is a reliable bulwark against the danger of the withdrawals of short term capital which laid low the financial might of London and very nearly visited New York with the same fate.

As for the balance of Germany's foreign trade the surplus of exports over imports has been fairly well-maintained and with the elaborate system of quotas and high import duties which have been devised under the pressure of extreme stringency, no upset need be apprehended from this quarter. It should, therefore, be possible for the monetary authorities in Germany, to ensure that the payment of the credit for the Bank for International Settlements is not followed by any precipitate abandonment of the gold standard. But it is possible that the move has been inspired by some ulterior political motives rather than necessitated by economic and financial circumstances. If that were so, any attempt to gauge the probable developments from a mere study of the relevant figures should prove futile and misleading. Such feelings are invoked by the fact that the possibility of a demand for the reduction of the interest on foreign loans has been coupled with the gloomy forecast of a devaluation of the mark.

The expediency of a rehabilitation of silver is being increasingly recognised by those sections of international economic opinion which are most interested in it. It is only to be expected that America would lose no opportunity of pressing the claims of silver on the attention of the world's statesmen. Our readers are aware that there is before the American Legislature a bill drafted by Senator Pittman, well-known in India as the author of the Pittman Act, empowering the Federal Government to accept payments of the war debts to America in the white metal. Of late little is heard of the fate of this piece of legislation. But during the week, the cause of silver has found new advocates. It is reported that means of raising the price of silver were discussed at great length in the conversations between the State department and Sir Ronald Lindsay, the British Ambassador. Doubtless, the authorities in America will take advantage of the visit of Mr. Ramsay MacDonald along with the representatives of other nations to discuss world economic recovery with President Roosevelt to explore the possibilities of international action on the silver question.

Three methods, it is reported, are contemplated for raising the price of silver. One is the limitation of production, and what looms as large in the eyes of the American silver producers, the limitation of sales by the Government of India. Secondly, the use of larger amounts of silver for purposes of subsidiary coinage. And lastly, the purchase by leading coun-

(Continued on page 631.)

BANKING:

It is sometimes said that, in speaking of simple transactions, Bank officials are prone to use terms which, far from being enlightening, are calculated to make confusion worse confounded in the ears of the customer seeking an explanation why he should do this or not do that. Branch Managers of Lloyds Bank are always willing to explain to customers and others the "Why and the wherefore" they should do a thing one way in preference to another.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

"DEMOCRACY IN CRISIS."

"Over three hundred different constitutions were promulgated in Europe between the years 1800 and 1880." And within a half century after, a similarly formidable number of dictatorships has been the lot of the European peoples. That in short is the most arresting phenomenon of the times in which we live. As a consequence we are faced with a raging epidemic of unbelief in parliamentary democracy which till very recently seemed a perfect instrument of satisfying the demands of Progress without passing heedlessly over the claims of Stability. The machinery of representative democracy has virtually broken down under the chaos of parties and principles. It is apparently impossible now to carry on the work of Government by letting two major parties take alternating shifts at the wheels. Even in Great Britain the Mother of Parliaments is a dowager, having passed on her estate of power to a caucus of reactionaries. Under the aegis of Herr Hitler, Germany is on the highroad to another form of Kaiserian despotism, after frequent and futile appeals to the electorate to end the stalemate of parties in the Reichstag. Andd if no striking change is visible in France, it is solely due to the French practice of forming cabinets by a mere shuffling of little groups of politicians. As for Italy, she has long plummed herself on the distinction of leading the reaction from democracy. In the lesser states of Europe the gravitation to dictatorship has been, if anything, more swift and sure.

* * *

When we reflect that for nearly a century representative government has been universally regarded as the sole engine of progress, the omens are highly disquieting. The present is temptingly opportune for critics of democracy to suggest that with the changed conditions representative government must be discarded as an instrument that threatens to outlive its usefulness. Yet it is of the essence of democratic theory, that the judicious exercise of sovereignty by the people is as much an end as a means. Democracy in that sense is at once the safeguard and the thing to be safeguarded. And even if this view be discarded, there never was a clear-out choice for the people between an exercise of their own power of direction and supervision on the one hand, and on the other, leaving a superman of capacity and integrity in his own unfettered discretion.

* * *

There is thus no escape from democracy except a gamble on the probity of an individual or a class. And no one who recognises these facts could view with anything but the gravest concern the apparent impossibility of preserving the democratic form of government. What, indeed, is the trouble of democracy to-day? Is the present deadlock an inevitable result of defects which inhere in democracy? Or is it a fever due to the reistance which democracy offers to the poisons in the system? Will democracy survive or succumb to these fevers? Will it succeed in ejecting the poisons and ultimately regain health and strength?

* * *

From the very earliest stages of modern democracy it was clearly realised that the dangers to the smooth working of democratic government would arise from the natural and irrepressible tendency of an enfranchised populace to use its vote for the removal of economic inequalities. Mill was among the earliest, to see the dangers which socialism would mean to the smooth working of democracy. Little or no attempt was made to see the proper relation of socialism to the ends of democratic polity ; and it was urged that the rise of socialism would mean the exposure of the sovereign people to the ignorance and cunning of the demagogues. To-day it is substantially true that the deadlock in all countries is due to the chaos of parties, the rise of numerous cults and creeds and the incapacity of the people to give a decisive verdict at least in the present state. The alignment of parties is due to a constant shift and shuffle of groups. The party system which seemed to provide an admirably suitable technique and machinery of representative government has been paralysed ; and parliaments are incapable alike of choosing and directing a responsible government.

* * *

The inability of the historic parties to align themselves on the basis of new ideals and policies and the consequences of such inability were foreseen years ago by Mr. Hobhouse and explained in his thoughtful and prophetic work on "Democracy and Reaction." He urged that Liberalism in the beginning of this century was faced with a serious dilemma. It had either to find the basis of co-operation with socialism or to allow itself to be embraced by Conservatism. He saw that Liberalism rightly conceived could have no conflict of purpose with socialism. Both are branches springing from the same trunk; and if Liberalism flinched from the prospect of co-operation with Labour, which was its just destiny, it would be proving untrue to itself and precipitating the conflict of class so dangerous to all society.

* * *

The trend of modern party politics since Hobhouse wrote, especially in England, is too well-known to need a recital here. Class consciousness has proved stronger than the urge of reason or humanitarianism. Liberalism differed from Conservatism only in the extent to which the former was prepared to go farther than the latter in making concessions to the people. The identity of the fundamental principles, though never stated, was ever understood. The differences in munitiae did not mar the continuity of Governmental policy or prevent the rival parties from taking turns at the help of State. The real difference between the historic parties was so little that Mr. Hilaire Belloc was led to argue in his "Party System" that the system was a huge hoax. The history of the British parties during the last two decades is the history of the coalescence of Liberalism with Conservatism.

* * *

Liberalism has thus failed in the test prescribed by Mr. Hobhouse, as he himself foresaw; and the natural result is the present chaos. An analysis and appraisement of subsequent developments is what is required to-day. And Mr. H. J. Laski attempts it in his "Democracy in Crisis" (George Allen & Unwin Ld.) The central principle, with which he elucidates the present position of representative government, is the same as that of Mill or Hobhouse, namely, the impact of socialism on the traditional forms of democracy.

* * *

Critics of democracy always point to the indiscipline of the people as the source of all danger to

orderly government and stable progress. And the chaos of parties affords the semblance of reason to such a diagnosis of present troubles. Mr. Laski refutes this contention by pointing to the management of trade unions by the working classes and the heroic qualities which they displayed during a crisis like the General Strike in England.

* * *

If the present situation is to be understood correctly it is necessary to distinguish between such indiscipline as may be inherent in the populace and the confusion caused by its attempts to give effect to its needs and demands. The success of a democratic government lies in the freeplay it offers to the majority to gain control of the machinery of State and to run it through its representatives for the benefit of the whole. So long as the principal parties had no fundamental differences neither confronted the other with any serious obstacles. But when the people's desires crystallised in the form of socialism the historic parties have closed their ranks and throw all their strength and influence against the socialists. The principle of freeplay for the wishes of the people loses all its force. Constitutional forms are deprived of their sanctity. The Labour Party is scandalised in diverse ways in the eyes of the public. Advantage is taken of the diversity of socialist creeds to disrupt the forces of Labour. The electorate is bewildered and confused; and a state of parties ensues in which the emergence of a clear majority, which is the foundation of representative government, becomes an impossibility. Capitalism fights its battles with its back to the wall. Democracy in its present form provides no institutional basis for the furtherance of equality amongst men.

* * *

That in short is Mr. Laski's diagnosis of the malady which results in dictatorship in all the lands where peoples till recently had been free. His peep into the future is even more illuminating. Taking the case of England, he is inclined to predict that sooner or later the electorate must overcome the effects of the mendacious propaganda carried on by the capitalists. For the very severity of that propaganda has its compensations.

> No Press can ever get itself accepted at its face value. Its misinterpretations tend always to have a short-term incidence. Experience itself is a safeguard against their tenour. The trade unionist who reads that the miners are misled by Russian-paid agitators is inoculated against that virus in innumerable ways. The voter may accept the Zinoviev letter in 1924; he does not believe it in 1929. He may be led to believe that a National Government will bind up his wounds in 1931; but his neighbour, who has suffered the Means Test, disillusions him six months later. There is an astringent power in the facts of experience which propaganda is powerless to destroy.

But despite the fact that the electorate will ultimately be able to see through the game, "capitalist democracy will not allow its electorate to stumble into socialism by the accident of a verdict at the polls". For innumerable obstacles will be thrown in the way of executing the popular decree. While the bulk of the politicians even of the capitalist classes might show loyalty to the constitution, there are other strongholds of capitalist sentiment which socialism cannot capture by peaceful means. Among them the Crown and the Army are the most important. Mr. Laski's examination of the historical antecedents of these two institutions is one of the most illuminating chapters in his work. "The monarch is unlikely", he says, "to be the enemy of the traditions he represents. The whole ethos of his position is alien from the idea of equality". And when the privileges of capitalist democracy are challenged, the weird metaphysics of limited monarchy will begin to present problems and the neutrality of the Crown is unlikely to be preserved. As for the Army, Mr. Laski points out that retired army men have almost invariably joined the ranks of the conservatism, that in the Irish Home Rule crisis they did not scruple to train the Ulster Volunteers and that the War Office acted like a special department of the Ulster Unionist Party.

* * *

The difficulties and turmoils suggested by this reading are, indeed, highly disquieting. But the explanation of present phenomena are the best help for the solution of the problems of the future. Mr. Laski urges that in examining modern democracy we must bear in mind that we are not examining democracy as such, but a particular form of it to describe which the term capitalist democracy seems the aptest. When it is remembered that democracy will always have to be led and that under conditions of economic inequality the weapons of leadership are with the capitalists, it will be found that capitalist democracy is more capitalist than democratic. The decay of Parliament is not due to inherent defects in its own structure. It is due to the erosion of the foundations upon which that structure rests. The indiscipline of the people is due not to a natural petulance but to the irritating contrast between the position of an individual as the citizen of a state and his position as a wage earner resting for his livelihood on the sweet will of his employer. There can be no cure to such indiscipline except the conditions in which the masses can be contended.

* * *

To a study so profound and keen, there can, indeed, be little to add by way of comment. But one might ask whether in explaining the complex phenomenon of disorder in democratic government in Europe solely by the rise of the socialist party

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write to-day stating date of birth, when full particulars will be sent to you, without obligation on your part.

OVER 86 YEARS' SERVICE IN INDIA

The STANDARD LIFE ASSURANCE COMPANY
ESTABLISHED 1825

HEAD OFFICE FOR INDIA:
Standard Buildings, 32, Dalhousie Square, Calcutta.

Mr. Laski is not pushing his socialist bias a little beyond its natural sphere. That much of the travails of Parliamentary government is due to the impact of socialism, no one can dispute. Even in a country like India the reactions of incipient socialism on the parties are unmistakable. But due weight must at the same time be given to the complexity of the problems with which each European nation is faced in its own domestic politics. But the problem common to all the nations is that of recreating the conditions in which the progressive nations of the West could fatten on the exploitation of the weaker peoples. The feature of modern democracy is not so much the subordination of the masses to the classes at the top, but the nationalism which found its vent in the subjugation of non-European peoples. If slavery was the canker of Greek civilisation and rank immorality rushed Rome to its doom, the corrosive influence in Western Europe is its national aggrandisement. The curse of the victors is the spoils of unrighteous aggression. To Mr. Laski, the crisis of democracy seems to emerge from the impact of socialism. But the subject peoples of the world, on the other hand, would note that the conditions, in which alone the powerful nations can experience an alround, though only proportionate, rise in the standard of living can be realised, are now gone for ever. The crisis of democracy in the West might then be said to result from the impossibility of recreating such conditions.

* * *

Adjustment to a dwindling national income is a task which is beyond the powers of statesmanship reared in the traditions of party politics. Labour, too, has proved no more equal to the task. The necessity of a reduction in the standard of living in England, for instance, is shirked as much by Labour as by Liberalism or Toryism. If democracy is impossible without the ultimate acceptance of socialism, no more is a socialist state possible without the acceptance of equality among the peoples of the world. Mr. Laski, we are sure, would agree that in spite of its acceptance of freedom for a country like India, Labour has not fully adjusted its demands and its outlook to the rights of subject nations. The crisis in Western democracy has been forced by two different factors. One is undoubtedly the impact of socialism at home, the other is the impact of freedom in other parts of the world on the economic life of Western nations.

* * *

If Democracy is to survive the crisis, it must strive to be increasingly true to its principles. It must recognise for what they are worth, those features and ideas of contemporary life which are mere survivals of an undemocratic age, and the creations of undemocratic elements in society. Mr. Laski is fully cognisant of what we seek to bring out in this context, when he says that the "Western way of life is in the melting-pot;" when he protests against that supreme example of the doctrine of success in action, "The restriction of the term 'society' to a little group of leisured people who could make themselves notorious in the news by the conspicuous waste in expenditure of which they were capable by reason of their wealth." There is more chaos in what Mr. Laski calls "the omnipresent anarchy of values" than in all the governments of the world put together. Democracy is in the beginning a political idea, and in the last resort a way of life. By the preservation of equality in political life, it paves the way to economic equality, and it is out of economic equality, that a true conception of social values and the means of a good life for the individual must emerge. Without economic equality, the centre of human obsessions can never be shifted from the wresting of a livelihood to a life of the mind. How can the release of mind and body be achieved for the pursuit of culture, so long as life is reduced to an envious and precarious scramble? The crisis of democracy surely suggests that we are pushed out of the portals of an old age; but who knows whether we are at the threshold of a new and a better?

THE MEANS TO PROSPERITY.

The acceptance of increased expenditure on current needs as the sole means of bringing about the much-desired rise in commodity prices points to certain courses of action, besides a programme of capital loan expenditure by the Governments of the world. It has been already pointed out in last week's article on this subject that there are few, if any, countries of the world which can afford to launch on a programme of capital expenditure without the fear that the increase of prices within the country and the acceleration of the flow of imports would tend to upset the balance of payments and create a new situation of instability. It is true that, considered purely theoretically, the effects of large-scale loan expenditure in any one country might reach to the farthest corners of the earth. But no Government would be justified in undertaking the risks involved in this course of action. It may also be that the action of any one country might after all prove a drop in the ocean of depressed world economy. Far otherwise would be the case of a number of governments agreeing to adopt the course suggested by Mr. Keynes with a rough simultaneity. But even for such concerted action it would be very helpful, if before pursuing a plan of that kind, the Governments could agree on some scheme of currency inflation which would provide the Governments and the markets concerned the means of large-scale expansion of currency.

It is this that leads Mr. Keynes to formulate a scheme of world currency to preserve a rigorously practical character. Mr. Keynes insists that the new additions should be strictly related to gold; for, however much monetary theory might point to the possibility of meeting the currency needs of the world without any reliance on gold, and, what is more, in spite of the refinements in modern currency practice, the developments of recent years point to the fact that, while gold is rapidly ceasing to be national money, it is becoming, even more exclusively than before, the international money most commonly held in reserve and used to meet a foreign drain. The reserves of international money should be available not only to the exceptionally needy but to all countries which consent to participate in the scheme in accordance with the general formula. It is also equally important that the depths to which prices have fallen to-day should not blind us to the necessity of preserving the control over the machinery of inflation and of retaining the power to restrain the pace, if prices should rise above a certain level. In fact, it should satisfy the essential conditions of elasticity of the circulating medium in accordance with the needs of the times.

To satisfy all these conditions Mr. Keynes regards it as necessary that there should be an international authority for the issue of gold notes, the face value of which would be expressed in terms of the gold content of the U. S. dollar. He reckons that 5,000 million dollars would be the limit of the new additions and that this amount should suffice for allotment to the various participating nations. The basis of allotment should be the amount of gold held in reserve at some recent normal date. Variations from this rule in the case of silver-using countries are, no doubt, contemplated. This provision would ensure that no country would acquire an amount of gold notes out of proportion to its capacity to support it with the necessary gold reserve. The gold notes would by special legislation be acceptable as the equivalent of gold though, of course, they would not be put into circulation. The other provisions stipulated by Mr. Keynes are comparatively of less importance being devised for purposes of management and having comparatively little relation to the monetary principles involved.

It may be easily expected that as regards the theoretical aspects of the scheme, Mr. Keynes would hardly leave any loophole for adverse criticism. It is about the practicability of such an international scheme that one would naturally feel more sceptic. But no one, who takes upon himself the responsibility of criticising the scheme as unpractical, can forget that there is hardly an international scheme to-day of any considerable potency for good which presents less difficulties than Mr. Keynes). The past history of international conferences shows clearly that other schemes and ideas enlisted no readier or no more willing support. But the belief that the recommendations of the Preparatory Committee of the World Economic Conference regarding what the committee chose to call "economic disarmament" could at an early date be put into effect. In fact, pious resolutions passed at international conferences during the last few years regarding tariffs and quotas are legion; and yet every such conference has been followed by the deliberate accentuation of the very evils which they sought to remove. Even in regard to questions like reparations and war debts, the solution has come more as an expedient than as a deliberate and free choice. There is thus a measure of unfairness in the criticism of impracticability which it is at once truthful and helpful to recognise frankly.

Of a different character, however, is the suggestion that, after all the shocks to confidence the international government loans have given during recent times, nations and statesmen would have to be more than human if they are to accede readily to any such scheme of world currency as Mr. Keynes has outlined. The criticism of Mr. O. R. Hobson already referred to in these columns on a former occasion is substantially true, marked as it may be by an unduly caustic language. There is really speaking no purely monetary measure which could enlist the ready support of the nations and assure the world of that increase of purchasing power which is the only antidote to the present crisis of consumption. The one notable exception is the rehabilitation of silver prices or of silver as a monetary metal. The latter is not free from the defects for which even better-devised schemes have been ruled out of consideration. But we venture to believe that international schemes for an artificial rise in the value of silver and the admission of the legitimacy of using silver for certain purposes of a monetary kind, such as subsidiary coinage or supplementary reserves for currency purposes, are not altogether beyond the pale of practical politics. There is a distinct move in America towards this end; and it may be hoped that it will meet with some measure of success.

Past experience and present conditions alike point conclusively to the impossibility of securing international agreement for any new scheme of currency. For there is neither confidence in the capacity and integrity of nations, nor has international co-operation advanced to the point at which a governing body, such as Mr. Keynes has envisaged in his scheme, could work to the satisfaction of all the parties concerned. It is a matter of common knowledge that certain sections of financial opinion in the world have come to regard the Bank for International Settlements as, for all practical purposes, a branch of the Bank of France. Such suspicions are strong enough to deter nations from setting their seal of approval for investing any international body, however carefully chosen, with the power to affect their financial fortunes.

If, then, any new international financial policy is to be ruled out as impracticable, what is the alternative to which world trade may yet pin such hopes as have been left to it? For our part, we believe that a programme of loan expenditure, adopted with previous international agreement and executed at about the same time in a majority of important trading nations, would exert a sufficiently strong pull towards recovery. Such a statement could not have been ventured a couple of years ago when nobody could see the end of what has come to be called the tragic book-keeping of the war. Now that America

General Manager.

is in a mood to consider the question of war debts in a spirit appreciably different from the old one, the old formidable obstacles to trade recovery and the recovery of international finance are out of the way. It is idle to expect that tariffs and other barriers to trade would be removed except by stages calculated to strengthen the confidence of each nation. In other words, no country would be prepared to effect these measures step by step unless it is able to assure itself of the wisdom of each step before taking the next. However much the representatives of the various governments might discuss amongst themselves, these traditional bugbears to world trade cannot succeed in bringing about their object. We are thus thrown back on government loan expenditure and it would be useful to examine the significance and effects of such a step should it come about, as, indeed, it promises to. In the first place, it would mean a signal increase in the volume of governmental activity in the sphere of trade and industry. But that would be only in keeping with the trend of the times and what seems to be an inevitable gravitation towards socialism and nationalisation. In the second place, a policy of government loan-expenditure would inevitably mean that in the distribution of the patronage and custom, which each government would possess, it would have to give the fullest recognition to the claims of national industry. For no popular legislature would consent to the dissipation of the artificially created purchasing power in foreign countries. And this would mean that, if and when loan expenditure is resorted to by the governments of the world on a large-scale, it would mean an accentuation of the present phenomenon of national economic self-sufficiency.

Our readers are aware that we have always held the view that in despite of all the frantic efforts of the world's statesmen, the revival of international trade in its old form is an utter impossibility. In fact, we are inclined to doubt whether such revival is an end devoutly to be wished for. The reconciliation of the various national interests which clamour for satisfaction could be achieved only on the basis of a substantial degree of self-sufficiency. When the people in every country make an insistent demand on their government for a rational and stable organisation of the internal economy, it is difficult to see how international trade can again be invested with its old importance. For there can be no plan in national economy if it is to be exposed to all the buffetings of the intractable seas of international trade. The utmost that could be done is to recognise the importance of some measure of integration in world economy based on the appreciation that international trade is only a part of world economy. Such integration is being achieved, though vaguely and unconsciously, by the quota systems adopted by the nations in regard to their imports, and by the producers of important commodities in regard to their markets. Behind all these strivings of the World's statesmen to revive the old economic order, there are strong undercurrents which work towards a balance of forces at a changed point of equilibrium. The travails of this transition could be mitigated without delaying the emergence of a new order, if the nations would in the coming conferences agree to a programme of simultaneous capital loan expenditure. In stressing the need, wisdom and value of such measure Mr. Keynes has done an invaluable service to mankind.

(*Continued from page 645.*)

tial machinery for the enforcing of safeguards catalogued in the White Paper, I can render but little help in the devising of such a machinery. If the point of view, however, is that the Reserve Bank should be established with the least possible delay for the simple, but conclusive reason that India ought to have had one a good few years ago, I can appreciate that all energy should be directed to the execution of the project, irrespective of the White Paper. Sir Samuel Hoare and those of his way of thinking say in effect: We must insist on the Reserve Bank, as we do not want your Indian Finance Minister to play monkey tricks with India's finances. We may with greater force and more apt justification tell Sir Samuel and those who think like him: We want a Reserve Bank because we do not want the India Office to continue to play monkey tricks with our finances. Britain asks India to have a Reserve Bank for political reasons. We demand a Reserve Bank on economic grounds. If London discussions are to be dominated by economic considerations much useful work can be done not only by those, whose ends are a theme for speculation in the daily press, and of whom a few hardly know the difference between a Reserve Bank and a bank with a reserve fund, but by those who have real knowledge and correct understanding of the place and significance of a Reserve Bank in national economy.

On my arrival in Delhi, many a kind, but shrewd, friend has confronted me with the somewhat taunting query whether the purpose of my visit at the very fag-end of the spring session of the Central Legislature is to canvass for myself a place in the delegation that is to be shortly sent to London on a joy-ride in connection with the forthcoming discussions on a Reserve Bank for India. Not a hope, I answered one and all. The views of *Indian Finance* on the White Paper are only too well-known. We are, in the first place, against the very idea of Federation, if the essential basis of the scheme is the coming in of the ruling princes. We believe that with one-third of the seats for Indian, but admittedly reactionary, India, and with an equal slice taken up by communal, and equally reactionary, British India, nationalist India, India of our hopes and dreams and aspirations, will be nowhere in the picture. Moreover, the ruling princes by the glamour of their patronage and the glitter of their gold would succeed in seducing the best of our legislators to *their* side, which is synonymous with the side of the bureaucracy. We have already a foretaste of what this demoralisation would be like. Not a few of the leaders who attended the Round Table Conferences have already known how vastly remunerative it is to be of service to the Princes in the way of getting them out of a scrape, or holding watching briefs for them, or tendering advice on constitutional matters, or otherwise taking part in negotiations or manoeuvres or intrigues for the enhancement of their status or increase of their salute of guns. One concrete result —the wag might say, the only result—of the three Round Table Conferences is that a few British Indian leaders have reaped good harvest directly and indirectly from Indian India. I am convinced that the advent of Their Highnesses in the Federal Legislature will mean the most corruptive influence on Their Lownesses claiming to represent the taxpayer in British India. It is not the taxpayers of British India but the tax appropriators of the States who will wield power. The *Statesman* and its friends are never weary of repeating *ad nauseum* the allegation that the Indian National Congress is financed, and, therefore, controlled, by the millowners and the capitalists of the Western Presidency. It is not my province to defend the Congress against its traducers. Others far worthier and more entitled to speak for the Congress have dealt with this sinister accusation. Be this as it may, I may tell the *Statesman* and its friends that the Federation, as laid down in the White Paper, which, they acclaim, would mean that its legislators would be financed by the Ruling Princes and Federation politics and policy would be entirely controlled by them. I have no doubt in my mind on this matter. I feel very strongly and I think the time has come when the blunt truth in this regard must be told and the Indian public must be made to realise what they are in for. I, for my part, would a thousand times prefer the existing Montford constitution to the new-fangled scheme of Federating States and Provinces. This is our first objection to the White Paper.

* * *

Secondly, these safeguards and special responsibilities and reservations are far too onerous and reforms thus hedged in are not worth having. Worse. They will, instead of cementing India into a nation, disrupt India into communal and other groups. The clauses on commercial discrimination are themselves a discrimination to the prejudice of Indians and detrimental to their interests. Nearly twenty years ago, Sir William Clark, a Commerce Member of the Government of India, in days prior even to the Montford reforms observed in the resolution which led to the appointment of the Industrial Commission that "the building up of industries where the capital, control and management should be in the hands of Indians is the special object we all have in view," and deprecated "only those steps which might mean that the manufacturer who now competes with you from a distance would transfer his activities within your borders."

* * *

What Sir William granted and conceded in the above passage nearly a generation ago is thrown to the winds in a constitution which is put forward as an improvement on the earlier constitutions adumbrated by Montagu-Chelmsford and by Morley-Minto. As for financial safeguards, all that I can say is that I would not like to be the unfortunate Finance Minister in the new regime. For a stray rose he will have umpteen thorns.

* * *

While *Indian Finance* holds such views on the main proposals contained in the White Paper, what place can I have on any delegation allied thereto, though in a sense only a minor and subsidiary. If the Reserve Bank proposal is to be viewed as essen-

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN.

RECEPTION OF MR. KEYNES' PROPOSALS.

The Parliamentary debate on unemployment this week shows unmistakable signs of the shake-up given to official opinions by Mr. J. M. Keynes' vigorous proposals for the restoration of prosperity. Gone is that negative, and pathetically helpless, attitude on the subject which found characteristic expression in Mr. MacDonald's Bethnal Green letter. Gone, too, is that confident air of gloomy foreboding revealed, only a short while ago, in the picture of inescapable unemployment for at least ten years envisioned by Mr. Neville Chamberlain. The promptings of a desire, though yet dim, to do something, a little more definite than what has hitherto been attempted, has at last been stirred in the heart of the Government. The Chancellor of the Exchequer has no longer any objection to public works expenditure on principle. Nor is the Government anxious to block any scheme which can be justified on its merits ; for instance, the construction of the Cunarder will be proceeded with, and no check is to be placed on the electrification of the railways. The real difficulty is the inability of the Government to hit upon any actually economic schemes ; and it was brought out with almost picturesque effect in the Chancellor's bland remark that "there were no schemes coming forward, because there were no schemes *to come* forward."

All this is, of course, unsatisfactory from the standpoint of the concrete contribution of the Government to the relief of unemployment and public prosperity. But it is of value as indicating the stimulus to popular thought and official conscience given by Mr. Keynes' proposals. The criticisms they have evoked, whether in approval or disapproval of their content, have been conducted with a spirit of earnest anxiety for the national welfare, which promises to be in itself, a very potent factor for the mobilisation of all potential assets towards recovery, with the utmost expedition, and to the fullest possible extent.

Sir Josiah Stamp on the balancing of Budgets:

Of these criticisms, the most arresting, from the standpoint of helpful and constructive discrimination, comes from Sir Josiah Stamp. He set himself deliberately to remove the misapprehensions following on Mr. Keynes' proposals, as a result of which, public apprehension in regard to them, has been multiplied to an unnecessary degree.

The first of these misapprehensions is related to the probable effect of Mr. Keynes' proposals on the national budget. The essential feature of the proposals consists in the stimulation of economic activity by schemes of organised public investment. It may be said that the cost of the schemes represents a measure of deliberate unbalancing of the budget. Is this for the public good? Does not an unbalanced budget affect the whole basis of the national credit? And will not a policy of public investment in industry deplete the sources of capital and spending power which would otherwise be exercised in private business enterprise, and tend thereby to curb that very proces of recovery which it is the main object of Mr. Keynes' proposals to stimulate?

Sir Josiah Stamp's answers to these doubts are in the nature of a challenge to all orthodox notions about the desirability of balancing a budget. The orthodox seekers of formal budgetary solvency are liable to ignore the fact that a balanced budget might, on occasions, coincide with a thoroughly unbalanced condition of the internal economy of a country. Public expenditure would rob private enterprise of capital and opportunity only when business activity is normal or in a flourishing condition. But in a period of depression, spending power, as represented by shrunken business and reduced expenditure, would go to waste and result in unemployment and economic disequilibrium unless the State stepped in with a bold programme of capital works. Borrowing for capital purposes, Sir Josiah argues, would enable the Government to make a mechanical adjustment between saving and spending which would be of great value for making good the shortage of private investment in business.

Sir Josiah Stamp concludes this part of the argument thus :

"Some day, if the world should get wiser in economic matters it would look a great deal more below the surface than the simple question of balancing a national budget, and would realise that an equilibrium of internal forces between money provided for investment and money used in investment would sometimes be also of great importance."

Sir Josiah Stamp deprecates fright at the mere word "inflation" which has come to be responsible for a great deal of confusion in economic thought, and states that what passes for inflation is really reflation from subnormal conditions. "The times are ripe", he pleads, "for a courageous advance in the direction of a self-retiring scheme attached automatically to the world price level in this emergency." There is sound sense in his plea that, even if it should prove futile, no harm would have been done ; the experience gained by one failure may in fact prove to be the stepping stone to a next attempt leading to success.

The outstanding fact in the economic world of the present day is that all the countries in it have become more than ever bound together as an economic unit, but no new financial machinery in recognition of the fact has yet been invented. Mr. Keynes' proposals, in the international sphere, are an attempt to supply this deficiency. In endorsing them, Sir Josiah Stamp condemns the attitude of allowing the difficulties involved to stand in the way of their being taken up. For, as he rightly observes, "we are not absolved from constructive proposals."

Agricultural Marketing Bill.

The Agricultural Marketing Bill, which passed the second reading in the House of Commons this week, marks the beginning of a deliberate policy of agricultural protection for the purpose of increasing both the volume and the prices of agricultural products. Limitation of imports, and the control of internal agricultural production are the means by which the Bill seeks to attain its objective. The most sensational part of this measure is the relegation of virtually dictatorial powers, to the President of the Board of Trade and the Minister for Agriculture over one of the largest basic industries in the country.

The first portion of the Bill provides for the creation of a Market Supply Committee, to be appointed entirely by the Ministerial dictators, to advise them in regard to the restriction of the import or production of any agricultural products that are the subject of an existing, or contemplated, marketing scheme. The second part provides for the administration of agricultural development schemes by means of a Board of three invested with almost absolute powers, also to be appointed by the Ministers. No production of the commodities covered by the schemes can be carried on without the permission of the Board. The Board has unlimited powers to "prevent, eliminate, or reduce inefficient or excessive production ; it may call for any returns of accounts or estimates from producers ; it may actually purchase premises and take over directly the work of production ; and it may impose heavy penalties on recalcitrant producers for the contravention of its regulations."

This formidable array of powers to be exercised by executive bodies to be appointed by Ministers, and carrying no real representation of producers or consumers, has in it all the elements of an emergency measure appropriate to a period of war. It is arguable that the problems created for Government and industry by the present world-wide economic depression are no less arduous, and call for no less effective arming of the State with exceptional powers, than actual war time. But the Minister of Agriculture has definitely made it plain that the Bill is not conceived as a "crisis" measure. It must, therefore, be judged not as the answer to an emergency, but as part of a deliberate State policy which is not solely guided by the requirements of the moment.

Considered from this point of view, the worst feature of the Bill is the sanction it gives, not as a temporary expedient, but as a settled item of national policy, to the pernicious principle of agricultural quotas and tariffs which has been condemned not only by the Preparatory Commission of the World Economic Conference, but by the British Chancellor of the Exchequer himself at the very time when the Bill was in pendency.

The main economic problem of the Government is the removal of unemployment, and the protection of the crumbling standard of life for millions of inhabitants. How is an isolated and artificial rise of agricultural prices, designed for the benefit of farmers that constitute only 10 per cent. of the population, going to confer any advantage or stimulate the demand, of a preponderatingly industrial population that is being progressively impoverished by trade depression, and depends for its subsistence mainly upon the export industries. The evil effects of the Bill on the costs of living and ultimately on the wages paid in the export industries is beyond doubt. But its expected benefits are at most uncertain and problematical. The *Economist* sums up its comment on the Bill by saying that it is framed "so as to permit jam being taken without the powder—protection first and organisation afterwards" ; and adds that "if it succeeds in attaining its object of raising prices, it will not be tolerated by the community; and if it fails, it will prove a costly experiment not only to the farmer but also to the public." The comment his harsh ; but not more so than the occasion justifies.

Reorganisation of Milk Industry.

Informed public opinion is tending to be sceptical about the efficacy of the proposals contained in the report of the Milk Reorganisation Commission. The Commission recommended, as a sort of gift to the farmers, that milk products from non-British sources, such as cream, condensed milk, milk powder and lactose, should be heavily taxed. These imports amount annually to the equivalent of some 36 million gallons of fresh milk, whereas the total quantity of liquid milk sold off from farms in England and Wales is not less than 1,165 million gallons. It follows that, even if the duty recommended by the Commission should result in the full replacement of all non-Empire imports by indigenous milk products, the increased demand thereby secured would reach barely 3 per cent. of the total volume of trade. It is doubtful, however, when even this modest advantage will accrue to English farmers, since the enhanced prices following the duty would certainly attract more Dominion produce, which already is double the value of the total home production of milk, and make substantial inroads on

the "gift" prepared for the farmers by the Commission.

Another recommendation of the Commission is that milk used in manufacture should be sold at rates fixed in relation to the uses to which it is put. That is, industries which, by dint of efficiency and technical skill, are able to make a greater business success of their operations than others, are to be deliberately put under a handicap in regard to the prices exacted from them for their raw material. This is bound naturally to curb the incentive for inventiveness from out of which new methods of disposing of surplus milk in profitable ways can be expected to come into being.

These unsatisfactory features of the Commission's report have given rise for a little more careful examination of the proposals, before legislation on the lines suggested is embarked upon.

The New Conversion Loan.

To reduce the unwieldy dimensions of the floating debt, the Government have decided to offer, with each week's Treasury Bills, varying amounts of Conversion Loan at 2½ per cent., redeemable between 1944-49. For March 24, the offer of Treasury Bills and Conversion Loan together was for £45 millions, of which a limit of £5 millions was set apart for the Loan. At present, the discount rate on Treasury Bills works out as cheaper than the interest rate on loans, but this may not always be so in view of the rapidly shifting conditions in the money market. Once the revival of business begins to create pressure for money, the capacity of the Treasury to raise credit, medium and long-term credit, at advantageous rates, would be at an end. The new Conversion Loan is thus a timely preparation for recovery, and may eventually prove to be the greater economy.

FRANCE.

CONTRADICTORY STATEMENTS ON BUDGET.

The Chamber of Deputies has reverted once again to the discussion of the Budget Bill, but there are considerable gaps which are yet a long way from being filled. For instance, the deliberations of the Chamber have centred largely on the Government's proposals for expenditure, with very little of definite or reliable data as to what the revenue is going to be. The usual practice is to base estimates of revenue yields on the results obtained in the penultimate year, but prompted, no doubt, by the desire to reduce, though only on paper, the size of the deficit, the Government have set out on a different mode of calculation, on the basis of the improvement which has become visible since the beginning of the current year. So far as direct taxation is concerned, it has been decided to base revenue estimates on the figures for the current year arrived at by the experts appointed during M. Cheron's regime, but their reliability would depend entirely on whether the improvement latterly registered would continue. In case it does not, the whole foundation of the budget would collapse, and a state of confusion would be reached, of which it is difficult to foresee the full implications and consequences at the moment.

The Government's lack of grip over its finances was illustrated, in a manner profoundly unpalatable to public sentiment, by the contradictory statements on official policy made by the Budget Minister and the Prime Minister respectively. While M. Deladier announced that the Finance Bill would involve "no fresh taxation, but substantial economies and large satisfaction to traders and manufacturers," M. Lamoureux was easing the public debt charge, it is calculated only to aggravate it.

Changed Attitude on War Debts.

Signs of a changed attitude in regard to the French payment of the War Debt instalment of December 15 last year which was defaulted on the due date ,are dimly visible in a resolution which a Radical deputy proposes to introduce in the Chamber to the effect that the default should now be made good. The psychological factors responsible for the change are of great interest. They can be analysed as follows:

(1) The American boycott of French goods, which resulted from the swift and bitter reaction of American opinion to France's default, has already hit some French manufacturers hard, and has created a desire for reconciliation.

(2) The accession of Hitler to dictatorship in Germany, which is regarded by Frenchmen as a looming menace to their supply, has begun to reveal the wisdom of friendly relations with so powerful a country as America.

(3) The U. S. A. banking crisis has bred a certain measure of sympathy for American difficulties in French hearts, which has been still further prompted by M. Roosevelt's readiness to discuss the War Debts with every debtor, in contrast to Mr. Hoover who insisted on payment first as a condition of discussion.

Although, for these reasons, French opinion has veered round from the attitude of uncompromising refusal to pay War debts to America unless Ger-

many paid her dues under Reparations to France, which is clung to with pertinacity only three months ago, the Deladier Government have so far made no decision in consonance with public opinion. If France were to make good the December default now, the Government would be confronted with the necessity of having to make another payment in June, unless an agreed international solution of the War Debts problem is reached meanwhile. Supposing such an agreement is delayed or frustrated, the French Government would be faced once again with an obligation for which it has no means of securing the support of Parliament. The result would be that the Government would have made good one default only to fall into another and would have failed to reap any political benefit or moral advantage from its costly gesture. To avert this series of consequences, the Deladier Government has sought refuge for the moment in a policy of drift.

GENEVA.

MR. MACDONALD'S DISARMAMENT PROPOSALS.

The Disarmament Conference has been hitherto occupied with interminable discussions on vague general principles which led nowhere. Into this atmosphere, Mr. MacDonald's comprehensive plan, with its minute and constructive suggestions, brings a touch of dead earnestness which promises to initiate a change from barren into fruitful channels.

The following is a summary (with acknowledgments to the Economist) of the plan which Mr. MacDonald laid before the Conference :—

PART I.—SECURITY.

The draft proposals are based on the existence of the Pact of Paris. It is declared that any war undertaken in breach of that Pact is a matter of interest to all the parties and a breach of the obligations assumed towards each of them. In the event of a breach or threat of breach of the Pact there is to be a conference between the parties if any five of them, including at least one of the Great Powers, so request. The conference may be summoned through the machinery of the League. Any conclusions reached at the conference must be concurred in by all the Great Powers and by a majority of the other Governments represented. If the conference be called in view of a threat of breach of the Pact, its object will be to agree upon the steps that can be taken in respect of such breach, or, if a breach has actually occurred, to determine which party is to be held responsible.

PART II.—DISARMAMENT.

Section 1.—Effectives.

With a view to limiting the power of aggression, it is proposed that land forces on the Continent should be reduced to a militia basis, fixing eight months as the maximum period of service, with the proviso that in cases approved by the conference the period of service may be extended to twelve months, to meet differing conditions in certain States. Given, however, the accepted principle of computing effectives by the average of the number of days' duty performed, the longer the period of service, the less will be the number of soldiers trained annually. In all Continental land forces, provision is made for a fixed ratio of long-service personnel to conscripts.

The following are the proposed figures for average daily effectives :—

Land Armed Forces.

Party.	Stationed in Home Country.	Total, including Oversea.
Germany	200,000	200,000
Belgium	60,000	75,000
Bulgaria	60,000	60,000
Spain	120,000	170,000
France	200,000	400,000
Greece	60,000	60,000
Hungary	60,000	60,000
Italy	200,000	250,000
Holland	25,000	75,000
Poland	200,000	200,000
Portugal	50,000	60,000

remaining naval forces of other Powers at the level fixed by the Washington and London Treaties until the next naval conference, due to meet in 1935. The truce in capital shipbuilding is thus extended to all Powers, except that Italy, if she desires, may lay down one ship to offset that laid down by France in 1932. Except as provided for by the London Naval Treaty, there will be no construction of 8-inch-gun cruisers, and all other construction will be purely for replacement.

Germany will be freed from the naval limitation clause of the Treaty of Versailles, but is to be required to conform to the truce in capital shipbuilding and to limit her other shipbuilding purely to replacement, the qualitative provisions of the Treaty of Versailles being removed. That is to say, the proposals stabilise her naval position up to the end of 1936.

Air Armaments.—At the end of five years from the entry of the Convention the war aircraft of the Powers listed below is to be reduced to the figures stated:—

Aeroplanes.

Belgium ...	... 150	Norway ...	... 75
China ...	... 100	Poland ...	... 200
Czechoslovakia ...	... 200	Portugal ...	... 25
Denmark ...	... 50	Roumania ...	... 150
Estonia ...	... 50	Siam ...	... 75
Finland ...	... 25	Spain ...	... 200
France ...	... 500	Sweden ...	... 75
Greece ...	... 75	Switzerland ...	... 75
Italy ...	... 500	Turkey ...	... 100
Japan ...	... 500	Union of S.S.R.	... 500
Latvia ...	... 50	United States of America	500
Lithuania ...	... 50	Yugoslavia ...	... 200
Netherlands ...	... 150		

As regards other countries, the *status quo* is maintained, *i.e.*, Germany is to possess no war aircraft.

No war aircraft (excluding troop carriers and flying boats) is to exceed three tons unladen weight. No further dirigibles are to be acquired during the period of the Convention.

Aeroplanes exceeding the quantitative and qualitative limitations imposed must have been disposed of, half by June 30, 1936, and the remainder by the end of the period of the Convention.

Civil aviation is to be dealt with on the lines proposed by the British delegation on June 30, 1932.

The Permanent Disarmament Commission is to draw up a scheme for complete abolition of naval and military aircraft conditional upon effective supervision of civil aviation. If effective supervision is found impracticable, a scheme shall be prepared to determine the minimum of aircraft required by each State.

PART IV.—CHEMICAL WARFARE.

Chemical, incendiary and bacterial warfare is to be prohibited on the lines already accepted by the Conference.

PART V.—MISCELLANEOUS.

The Permanent Commission.—A Permanent Disarmament Commission is to be set up composed of one Government delegate from each contracting party. Its functions shall be to supervise the execution of the Convention. Any contracting party whose attitude may have been the subject of criticism shall be entitled to request the Commission to conduct investigations in his territory. At the request of one or more of the contracting parties the Commission may decide to have investigations of alleged breaches conducted on the territory of any high contracting party. Such a decision shall require a two-thirds majority of all the members of the Commission, whether present at the meeting or not.

In the Event of War.—Should any of the contracting parties become engaged in war, or should a change of circumstances constitute, in his opinion, a menace to his national security, such party may suspend temporarily, in so far as he is concerned, certain provisions of the present Convention other than, notably, the abolition of bombing from the air, and the use of chemical, incendiary and bacterial weapons.

The Period of the Convention.—The Convention is to remain in force for five years, except the naval provisions (which will terminate on December 31, 1936), and the rules forbidding certain methods of war (which are to remain in force indefinitely). Before the expiry of the Convention a further Disarmament Conference is to be held.

The Peace Treaties.—The Convention will replace the provisions of the Peace Treaties which at present limit the arms and armed forces of Germany, Austria, Hungary and Bulgaria.

Debts ...	89,896	Stores & Spares ...	44,443
Profit & Loss ...	52,549	Outstandings ...	73,846
		Cash ..	62,868
Total ...	3,92,841	Total ...	3,92,841

Extracts from Directors' Report:

Account for the year ended 31st December, 1932, shows a net profit on the year's workings, after wiping off Depreciation on Machinery and Plant amounting to Rs. 24,387-15-2, and also after charging Agents' Commission amounting to Rs. 9,949-1-9, of Rs. 49,151-1-3, which together with the balance brought forward from last year's account of Rs. 3,395-4-9, gives an amount for disposal of Rs. 52,549-6, out of this sum the Directors beg to declare, with the sanction of the Shareholders, a Dividend of Rs. 7-8 per Share, absorbing Rs. 22,500, and to transfer to Reserve Fund Rs. 25,000, total Rs. 47,500, leaving a balance to carry forward to next year's account of Rs. 5,049-6, which your Directors think you will find satisfactory.

BIRLA COTTON SPINNING & WEAVING MILLS, LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	15,00,000	Block (nett) ...	15,57,000
Reserves ...	2,51,250	Stocks ...	13,91,130
Debts ...	19,54,310	Stores ...	91,406
		Outstandings ...	4,98,147
		Cash ...	12,170
		Profit & Loss ...	1.55,707
Total ...	37,05,560	Total ...	37,05,560

Extracts from Directors' Report:

Report for the half-year ended 31st December, 1932, shows a manufacturing loss of Rs. 1,00,221-7-2. After debiting Interest, Commission and Depreciation on furniture and conveyance, writing off Bad Debt and taking into account the balance of the previous half-year, the Profit and Loss Account shows a net balance, at debit, of Rs. 1,55,707-0-1, which the Directors recommend, should be carried over to the next half-year's Account. The loss that accrued in the period under report is mostly due to the continuous fall in the prices of piecegoods, by which the stocks were affected. Japan has been selling goods at very cheap rates and flooded the market with the same. She has obtained a great advantage by the depreciation of her Currency. Repeated representations have been made to the Government of India to remedy the situation by adequate steps but so far the needful has not been done. If the position remains as it is to-day, the future of the Cotton Mill Industry looks to be very uncertain. During the period under report depreciation on Buildings and Machinery has not been provided for, as in the opinion of the Board, the depreciation charged in the past adequately covers the same. Birla Brothers, Ld., Managing Agents.

		Outstandings ...	1,00,711
		Cash ...	4,060
		Profit & Loss ...	63,023
Total ...	6,34,920	Total ...	6,34,920

Extracts from Directors' Report:

Report for the half-year ended 31st December, 1932, shows a loss on Revenue Account of Rs. 7,395-12. After writing off Rs. 15,384-0-7 for Depreciation of Block and making sundry adjustments, there remains a balance of Rs. 63,022-4 at the debit of Profit and Loss Account, which it is proposed to carry forward. During the period under review there was no change for the better in trade conditions and sufficient orders were not available to enable the Works to operate without loss.—Balmer Lawrie & Co., Ld., Managing Agents.

BOMBAY ELECTRIC SUPPLY AND TRAMWAYS CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	...3,60,00,000	Block	...5,89,89,649

		Casb & Deposits	... 14,33,277
Total	...7,13,98,259	Total	...7,13,98,259

Extracts from Directors' Report:

Report for the year ended 31st December, 1932. The total revenue for the year 1932 from all sources amounted to Rs. 1,64,96,591-3-11, the total expenditure amounted to Rs. 1,00,06,225-1-1, the net receipts from the year's working aggregated Rs. 64,90,366-2-10, deduct—Interest for the year on 7 per cent. Debenture Debt Rs. 7,00,000, leaving a balance of Rs. 57,90,366-2-10.

From this balance the following further items of expenditure have to be deducted before arriving at the net profit available for distribution:—

Provision for Depreciation:—General Account Rs. 16,67,922, Special Account Rs. 2,44,242, total Rs. 19,12,164; provision for Reserve against fluctuations in value of Assets Rs. 75,000, provision for writing off Rights and Confessions Rs. 40,710, after making these deductions aggregating Rs. 20,27,874, there remains an available balance of profit of Rs. 37,62,492-2-10, to which has to be added the amount brought forward from 1931 account Rs. 2,69,378-8-7, making a balance of profit available for distribution of Rs. 40,31,870-11-5.

The Directors recommend that this sum be appropriated as follows—To Dividend for the year on 7 per cent. Cumulative Preference Shares Rs. 6,30,000, to payment of Dividend for the year on the Ordinary Shares at 12 per cent. Rs. 32,40,000, to Bonus to the Company's Officers and Employees Rs. 1,05,000 to be carried forward to next year's Account Rs. 56,870-11-5, total Rs. 40,31,870-11-5.

Extracts from Directors' Report:

Report for Season 1932. The outturn has been 1,309 maunds as compared with an estimate of 1,100 maunds and an actual crop of 995 maunds in 1931. Last year's improvement in manufacture was barely maintained, but the market was even more depressed, and the crop realized an average price of only 6 annas 3 pies a lb. as against 8 annas 8 pies obtained for the previous season's crop. The 37 acres mentioned in the last Report as having been abandoned have been brought under cultivation again, and the total area now under cultivation is 383 acres. The receipts amounted to Rs. 41,088-2-7 and the expenditure to Rs. 57,235-11, showing a balance at debit of Revenue Account of Rs. 16,147-8-5. Adding to this—Balance brought forward from previous year, Rs. 744-1-2; Subscriptions to Octavious Steel & Co., Ltd., Provident Institution, Rs. 287-6-9; total Rs. 1,031-7-11; there remains a balance of Rs. 17,179-0-4 at debit of Profit and Loss Account, which is carried forward. Octavius Steel & Co., Ld., Managing Agents.

Telephone, Calcutta 3021.

Extracts from Directors' Report:

Report for Season 1932.

Crop.—The outturn has been 1,151 maunds as compared with an estimate of 1,250 maunds and an actual crop of 1,090 maunds in 1931. The teas showed a decided improvement on the previous season's, but meeting a still further depressed market they realized an average price of 6 annas 2 pies a lb. only as compared with 7 annas 2 pies realized for the previous season's teas. No extensions were put out during the year, and the area under cultivation remains at 396 acres.

The receipts amounted to Rs. 38,785-8-6 and the expenditure to Rs. 58,068-14-4, showing a balance at debit of Revenue Account of Rs. 19,283-5-10. Adding to this:—Balance brought forward from previous year, Rs. 64,225-0-4; subscriptions to Octavius Steel & Co., Ltd., Povident Institution, Rs. 360; total, Rs. 64,585-0-4; there is a balance of Rs. 83,868-6-2 at debit of Profit and Loss Account which is carried forward. Octavius Steel & Co., Ld., Managing Agents.

INDO-BURMA PETROLEUM CO., LD.

Extracts from Directors' Report:

Report for the year ending 31st December, 1932. After providing Rs. 7,30,000 for depreciation, writing off Rs. 70,000 against our Investment in the Hessford Development Syndicate, Ld., and setting aside Rs. 3,39,540-13-10 to meet Income-tax and Super-tax payments, there remains a balance of Rs. 18,07,171-7-2 of which Rs. 1,25,443-7-8 was carried forward from the previous year at the credit of Profit and Loss Account. The Dividends on the 7 per cent. Preference Share Capital absorb Rs. 3,50,000 and the Interim Dividend of Rs. 2 per share on the Ordinary Share Capital paid on the 30th November, 1932, accounts for a further sum of Rs. 4,43,090, leaving the net amount available for distribution at Rs. 10,14,081-7-2. We recommend the payment of a Final Dividend on the Ordinary Share Capital of Rs. 88,61,300 of Rs. 4 per share payable on the 29th April, 1933, which will absorb Rs. 8,86,180, and that the sum of Rs. 1,27,901-7-2 be carried forward to 1933.

MADAN THEATRES, LD.

Synopsis of Balance Sheet:

Extracts from Directors' Report:

Report for the year ended 31st December, 1931. The loss during the year under review amounted to Rs. 15,33,130-2-7. The Directors have further charged depreciation as follows:—Depreciation on Buildings, Rs. 1,66,746-11-5; depreciation on Theatre Fixtures, Fittings, Furniture and Cinema Plant, Rs. 1,00,000; depreciation on Leases, Rs. 1,500; depreciation on Office Furniture and Fittings, Rs. 1,535-4-0; depreciation on Motor Cars, Buses and Lorries, Rs. 8,452-8-0; depreciation on Studio and Laboratory Plant, Rs. 10,321; reserve for Bad and Doubtful Debts, Rs. 5,000; total, Rs. 2,93,555-7-5. This will make the total loss to Rs. 18,26,685-10-0. Deducting therefrom the sum of Rs. 19,110-15-2 brought forward from last year's account and appropriating the sum of Rs. 4,978-5-0, the balance of Reserve for Income Tax and Super Tax, the balance of loss, *viz.*, Rs. 18,02,596-5-10, is carried forward.

RAWALPINDI ELECTRIC POWER CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	15,00,000	Block ...	25,31,299
Reserves ...	7,16,996	Stock, etc. ...	2,11,536

Profit & Loss ...	1,93,386	Cash ...	1,43,515
Total ...	29,87,813	Total ...	29,87,813

Extracts from Directors' Report:

Report for the twelve months ended 31st December, 1932.

Despite the adverse and difficult conditions arising from even worse trading conditions than in the previous year, the Directors are pleased to again place before you a Balance Sheet which they consider shows progress in all three of the undertakings, resulting from economical development of increased load, and economies in operation which have offset the average decreased consumption of consumers. These circumstances have necessitated slower development and made reductions in rates for supplies to the public an impossibility at the present moment. This fact is readily understood when it is remembered that taxation has increased 57 per cent. and fuel costs 15 per cent., as compared with the cost of these two items at the time the Rawalpindi Electric License, 1923, was granted to this Company.

After provising for Reserves and Bonus to Employees as under, your Directors recommend the payment of a Final Dividend of 6 per cent. free of Indian Income Tax, making a total dividend for the year of 12 per cent. free of tax.

A Summary of the Profit and Loss Account is as follows:—Balance at credit as per last Balance Sheet, 31st December, 1931, Rs. 1,86,005-14-9; less Final Dividend of 6 per cent. (tax free) for 1931, Rs. 84,374; Income and Super Tax 1932-33, Rs. 58,405-10; income and Super Tax Surcharge 1931-32, Rs. 4,949-14; bonus to Staff Rs. 7,500; transferred to Depreciation Reserve Rs. 20,000; total Rs. 1,75,229-8; leaving a balance, Rs. 10,776-6-9; add Net Profit for year to 31st December, 1932, as per Profit and Loss Account attached, Rs. 2,72,609-15-3; total, Rs. 2,83,386-6; less Interim Dividend of 6 per cent. (tax free) for year 1932, paid on 8th September, 1932, Rs. 90,000; leaving a balance Rs. 1,93,386-6. The Directors recommend that this balance be disposed of as follows:—Payment of a Final Dividend of 6 per cent. (tax free) for year 1932, Rs. 90,000; provision for Income and Super Tax, Rs. 60,000; bonus to Staff, Rs. 7,500; transfer to General Reserve, Rs. 20,000; total Rs. 1,77,500; balance to be carried forward, Rs. 15,886-6. The Directors have sanctioned a bonus not exceeding Rs. 7,500 to be distributed to the Employees of the Company in accordance with their length of employment and service record.

SHAHABAD CEMENT CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.

Profit & Loss ...	3,39,847	Outstandings ...	4,58,530
		Cash & Invests. ...	11,44,829
Total ...	69,13,553	Total ...	69,13,553

Extracts from Directors' Report:

Report for the year ending 31st December, 1932. The year's working shows a profit of Rs. 15,80,782-0-3 which with the sum of Rs. 44,064-6-7 brought forward from the preceding year's account, makes a total of Rs. 16,24,846-6-10. Deducting from this the sum of Rs. 2,45,000 being the ad-interim dividend paid for the half-year ending 30th June, 1932, the balance is Rs. 13,79,846-6-10, out of which the following sums amounting to Rs. 10,40,000 have been appropriated:—To Depreciation of Machinery, Buildings, Furniture and Fittings, etc., Rs. 3,75,000, to Reserve Fund Rs. 3,00,000, to Equalization of Dividend Fund Rs. 3,50,000, to Special Allowance to Staff Rs. 15,000, total Rs. 10,40,000, which leaves a balance of Rs. 3,39,846-6-10. From this the Directors recommend the payment of a dividend for the half-year ending 31st December, 1932, at Rs. 8 per share which will absorb Rs. 2,80,000, leaving a balance of Rs. 59,846-6-10 to be carried forward to next year's account. The Directors beg to report that they have deemed it advisable in the general interests of the Industry to enter into an agreement with the Cement Marketing Co., of India, Ld., Bombay, for a period of 5 years from 1st April, 1933, on terms which they consider satisfactory.—Tata Sons, Ld., Agents.

WORLD OF INDIAN FINANCE

Calcutta, April 21, 1933.

Distinctly firm conditions have prevailed in the money market. Interbank call money changed hands at as high a rate as 3½ per cent. Even so, lenders had no difficulty in securing top rates and borrowers had every difficulty in securing their requirements. In view of the known and visible factors, this spasm in the money market is somewhat difficult to understand. For, the obvious facts are that (1) the market is taking up Treasury Bills only on a small scale ; (2) it is in receipt of substantial funds from Treasury Bills Maturities ; (3) fairly large sums have flowed into the market in receipt of sales of sterling to the Government and (4) there has been no change in the trade situation, the demand for money on trade account continuing to be poor. For explanation of the dearer money conditions of this week and a few days prior thereto, one has to appreciate the technical position of the giltedge market. On an earlier occasion, it was remarked, in these columns, that owing to the extremely poor return on three months Treasury Bills, banks were diverting their attention and activities to short-term and medium-term giltedge securities. These purchases reduced the available volume of surplus funds in banking circles. In such a situation, dealers and operators in giltedge, who had also kept an overbought position, came to need financial facilities for taking delivery of the scrips that came on the market at the last settlement of the Bombay stock exchange, which fell on April 20.

It would appear that anticipating an early announcement of a new loan on terms and under conditions in which giltedge should show further improvement, operators particularly in Bombay but also, to a certain degree, in Calcutta, had bought securities on a considerable scale. The two scrips, that came in for attention from those who expected to have a speculative flutter, were 3½ per cent. Rupee Paper and 4 per cent. 1960—70 loan. From the reports that we have received from Bombay, we understand that the settlement on April 20 passed off smoothly. However, as much as Rs. 1½ crores of securities had to be carried over to the next settlement by *budlee* arrangement. Bulls had to pay as much as one anna premium for the *budlee*. This is, surely, an indication that there has been some difficulty in the financing of the securities taken over to the next settlement. At the same time, operators have also taken up substantial amounts of scrips. But, in the ultimate resort, it is the banks that have to finance the securities of which delivery was taken. It follows that some principal operator outside the market has unloaded a large parcel of securities; that these have been purchased by professional operators in the market ; and that the finance required in this behalf has caused a heavy drain on the surplus resources of banks. Because of dearer money, the Government received, on the weekly sterling tender day, applications for £518,000 at 1s. 6 1/16d. This rate and this size of applications were not justified by the intrinsic conditions of the exchange market in the current wtek. This is really a token of the money market rather than of the exchange market. Till the securities that are now on the hands of the market operators have passed into the hands of *bonafide* investors, or till something happens to lighten the load of the professionals, no relaxation of the present monetary pressure is to be looked for. We do not, however, see any reason why any *bonafide* movement from investors could not spring up in the very near future. It is now more or less certain that the Government will come out with their next loan in the course of a few days. We are justified in assuming that as a result of the lessons which the authorities have learnt from the success of the January loan issue and the February loan issue, they may be depended on to execute the next loan programme in a manner in which existing securities in the market will make a braver showing after the announcement.

Indian Finance has been insisting on two cardinal principles in this behalf. The first is that the borrowing rate in respect of any new loan should be lower than the yield forthcoming on the existing securities on the eve of the loan. The second is, that the sums available in the Debt Redemption Fund should be freely, generously, and intelligently used for support of the securities market at the

psychological movements. We have every reason to believe that the Government have accepted these principles as essential for the success of their new loan programmes. Basing our view on this assumption, we are convinced that over the next few weeks, the giltedge market will witness lively conditions and an upward trend of prices. If such bullish forces have full sway, investors are sure to be drawn into the market ; and the surplus stocks in the hands of professional jobbers would be quickly disposed of. As we have suggested, it is quite likely that the Government themselves will find it necessary to make open-market purchases with a view to create a favourable atmosphere for the new loan. This should also help the market to get rid of excess stocks.

The suggestions as regards the plan of the new loan, advanced in these columns, have been, in broad terms, that there should be a medium-term loan as well as a long-term loan. The type of medium-term loan suggested by us is a 3½ per cent. 10-15 year issue at Rs. 99 or par. The long-term loan recommended by us is the 4 per cent. 1960-70 at Rs. 101. We should think that alternative proposals are also possible though we consider that the original proposals are most suitable. The Government may well decide on a 3 per cent. very short-term loan at an issue price to give an yield of roundabout 3½ per cent. and a 3½ per cent. medium-term loan at an issue price to give an yield of 3.80 per cent. or thereabouts. If the yields suggested here are those that the Government finally decide on, the effect of the announcement of such loans would be to impart a distinctly bullish tone to the giltedge market. We would suggest, in any case, that the Government might issue the loans on the basis that the shorter-term loan is to be a cash loan for a limited amount of Rs. 10 crores to Rs. 15 crores and the other is to be a conversion loan. If this is the plan followed, it may be taken as certain that the cash loan will be subscribed within a few minutes of the opening of the loan. The psychological effect of this early over-subscription would be to ensure the success of the conversion plan.

Exchange has been very quiet. The American

---

developments have given a fillip to silver, jute, hessian and jute shares. This has also stimulated speculation in cotton. In the Indian money markets, there have been considerable speculative deals in dollars. There were large sales of dollars at about Rs. 390 to a hundred dollars and most of these sales have been covered on the basis of Rs. 350 to a hundred dollars. The only market on which America's abandonment of the gold standard had an adverse effect is exchange. But if money conditions continue as they are, the setback in exchange would be more than arrested. On the weekly sterling tender day £518,000 was received on the basis of 1s. 6 1/16d., and accepted in full. All lower tenders were rejected.

The closing rates are: 1s. 6d., T. T. for April-May; 1s. 5 31/32d., June-September T. T.; and 1s. 5 15/16d., October-December T. T.

Bills may be quoted: 1s. 6 1/32d.; for three months; and 1s. 6 1/16d., forward deliveries.

Money was in good demand. Call money quoted 3½ per cent. One-month, two-month and three-month deposits quoted 1, 1¼ and 1½ per cent. rspectively.

FINANCE ABROAD.

The development of the week in the world of international finance is, of course, the re-imposition of the embargo on gold in America and, what means the same thing, the abandonment of the gold standard in that country. But the effects of this abandonment are so widespread that it calls for detailed comment in the columns devoted to internal developments. Elsewhere in this issue we discuss at some length the events that led up to America's abandonment of the gold standard and the immediate, short-term and long-term effects on the country's trade, industry and finance. It would, therefore, be more appropriate here to afford a glimpse into the conditions of American finance before this landslide. From the manner in which President Roosevelt energetically worked up a programme of reconstruction and found it possible to reopen the banks and to lift the embargo on the export of gold for legitimate purposes of business, the world derived some hope that the progress, which Mr. Roosevelt was able to achieve, would be sustained and that the world has been spared the unsettlement arising from a depreciated dollar. But it should not be forgotten that it was always a mere hope; for the banking crisis had awakened the attention of the world to such serious defects in the structure of American banking and finance that it was obviously too much to hope that reconstruction could be effected easily or soon.

A perusal of the mail papers would seem to suggest that after the adoption of certain measures under the pressure of the banking crisis, Mr. Roosevelt himself was not quite certain about the further course to pursue. Apprehensions had been entertained in certain circles that the regime of rigid economy in Government budget and far-reaching and adequate reforms in financial administration, of which Mr. Roosevelt gave unmistakable indication, would not continue for long. For early in the month President Roosevelt proposed legislation to help to relieve farmers of their mortgage burden by re-financing farm indebtedness. The Farm Relief Bill was introduced into the Senate soon after the President's message to the Congress was delivered. The Bill provides for the issue of 2,000 million dollars Federal 4 per cent. bonds guaranteed by the Government. These bonds would be offered, to holders of farm mortgages in exchange for part of their holdings, the interest of which does not exceed 4 per cent. It is something that bankers in Wall Street are not sceptical of the success of the scheme. According to one banker of international repute, a farmer with, say, 12,500 dollars mortgage carrying 7 per cent. interest would be willing to assume 2,500 dollars of the proposed 4 per cent. bonds as first mortgage 5,000 dollars as second mortgage bearing say 5 per cent. interest with the balance of 5,000 dollars written off and a total carrying charge for interest reduced from 875 dollars to 350 dollars. According to the general estimates holding the field at Washington farm mortgages aggregate 8,500 million dollars with 3,500 million dollars additional short-term debts making a total of farm debts of 12,000 million. The old interest rates and farm debts stand at between 7 and 9 per cent.

While it is quite possible that on the basis of writing off a considerable fraction of the total debts, the new scheme of financing farmers might succeed, it is certain that any such scheme of financial reconstruction cannot possibly succeed so long as the deflationary regime is continued and bearish sentiment in regard to prices rule over the minds of men. We have always held the view that a period of rising prices brought about by a healthy system of deflation is the only time in which schemes of reconstruction, however wisely formulated, may have any chances of success. What is true of internal reconstruction applies, though in a far less degree, to the stimulation of American exports to overseas countries. Our readers are aware that in the face of all the heartening reports from America about the maintenance of the gold value of the dollar and even in the face of such definite signs of apparent improvement as the lifting of the embargo on gold, we had stuck to our opinion that the cleansing of the Augean Stables of American finance could be done only with the hose pipes of an inflated currency.

With America definitely off the gold standard—and this time let it be remembered even Mr. Woodlin makes no subtle distinction between abandonment and embargo—one's thought necessarily turns to the prospects of success for the conversations now presumably going on in Washington between Mr. Roosevelt and the heads of the principal trading countries of the world. The last fortnight, which, in fact, is the eve of the Conference, has been disconcertingly fruitful in obstacles to the success of the conference. In India, we have had the abrogation of the Indo-Japanese Treaty of 1908 and the passage of the Anti-Dumping Bill through the Indian Legislative Assembly. There is no mistaking the resentment which these measures have evoked in commercial circles in Japan. Talks of retaliation on the part of Japan against Indian exports have been rife, though at the same time there are in both countries certain sections which still hope that a convention on the basis of a quota or other conciliatory measures is not altogether impossible. But it is certain that the usual good feeling between two countries has at the moment suffered an eclipse; and Japan is not likely to feel that Great Britain has no responsibility for this action of the Indian Government. Add to this the effects of the American devaluation, and the resulting situation is far from conducive to the success of the international talks at Washington. It seems to be agreed on all hands that the major idea of the United States Government in bringing about the deflation at this moment is to make the representatives of the European and other foreign Governments realise that America is not without her trump card in this game of concerted international action for a world trade revival. That in the second quarter of 1933 the world should be faced with such bad omens is indeed, too sad.

1677

BANKING:

It is sometimes said that, in speaking of simple transactions, Bank officials are prone to use terms which, far from being enlightening, are calculated to make confusion worse confounded in the ears of the customer seeking an explanation why he should do this or not do that. Branch Managers of Lloyds Bank are always willing to explain to customers and others the "Why and the wherefore" they should do a thing one way in preference to another.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Tuesday, April 18. The total amount offered was Rs. 54,75,000. Tenders at Rs. 99-11-3 and above were accepted in full. Lower tenders were rejected. The total amount accepted was Rs. 53,25,000, the average rate of accepted tenders being Re. 1-3 per annum.

Tenders for Rs. 1½ crores of three months Treasury Bills will be received on Tuesday, April 25. Successful tenderers should make payment on Friday, April 28. Other conditions are as usual.

STERLING TENDERS.

The Controller of the Currency notifies that on Wednesday, April 19, tenders to the amount of £518,000 at 1s. 6 1/16d. were received and allotted in full. Lower tenders were rejected.

On Wednesday, April 26, £1,000,000 will be offered for tender on the same conditions as previously announced.

THE GOLD STANDARD RESERVE.

MARKET REVIEWS.

CALCUTTA STOCK EXCHANGE.

(By our Correspondent).

Thursday Evening.

Jute.—This section was very steady during the period under review. The recent strength of jute shares was fully maintained, and prices improved from 30 to 40 points in some instances, from the levels prevailing a fortnight back. Howrahs and Kamarhattys advanced to Rs. 42 and Rs. 409 respectively but again receded to Rs. 41-10 and Rs. 406 in the mid-week. Hessians improved to Rs. 8-14 and raw jute to Rs. 28-2. Among other bigger denominations Alliance was placed at Rs. 234, Albions Rs. 238, Anglo-Indias Rs. 205, Auckland Rs. 171, Bally Rs. 125, Barnagore Rs. 121, Budge-Budge Rs. 329, Champdany Rs. 123, Cheviot Rs. 202, Dalhousies Rs. 377, Fort Gloster Rs. 462, Fort William Rs. 230, Kamarhatty Rs. 412, Kelvin Rs. 470, Kinnision Rs. 635, Lansdownes Rs. 133, Lawrence Rs. 452-8, Lothians Rs. 265, New Centrals Rs. 357, Orient Rs. 195, Union Rs. 380, Belvederes Rs. 333, Gourepores Rs. 303. Among Rs. 10 stocks, Birlas were quoted Rs. 7-8, Clives Rs. 25, Empires Rs. 32-4, Howrahs Rs. 42, Hukumchands Rs. 15-12, Nationals Rs. 20-2, Presidency Rs. 4-12, and Reliance Rs. 67-4. There has been good enquiry for Hessians from overseas and that is largely responsible for improved share quotations. The general tone of the market is strong and higher prices are likely.

Cotton.—Cotton shares ruled steady and a fair turnover resulted. Bengal Nagpur (Ordy.) were marked at Rs. 21, Kesorams (Ordy.) at Rs. 3-12 and Dunbars (Ordy.) Rs. 108, New Victorias (Ordy.) changed hands at Rs. 1-10 and Mohinis Rs. 8-4.

Coal.—Trading was on a limited scale without any fresh feature to comment on. Bengals accounted for a deal at Rs. 216. Equitables changed hands at Rs. 15-6, New Beerbhom (Ordy.) Rs. 8, Raneegunge Rs. 30 and Standard Rs. 20. Among the lower priced stocks North Damudas were marked at Rs. 3-2, Samlas Rs. 1-11 and Talcher Rs. 1-10.

Miscellaneous.—A fair business was put through in this section and engineering and sugar shares were bright features. Electric shares kept steady, though business was on a restricted scale. Among Engineering shares, Indian Standard Wagon (Ordy.) advanced to Rs. 52-8, while Indian Iron and Steel and Bengal Iron remained steady ; Indian galvanising were marked at Rs. 9-4. Sugar shares were again in good demand. Cawnpore (Ordy.) were dealt in at Rs. 36-6, Champarans Rs. 29, New Savan Rs. 18-4; Ryam Rs. 47 and Samastipore Rs. 18-2. Among others, Burma Corporation were marked at Rs. 8-4 ex-dividend. Midnapore Zemindary were dealt in at Rs. 69. Bengal flour changed hands at Rs. 140, Triton Insurance Rs. 160, and Ivan Jones Rs. 4-7. Bengal Paper (Ordy.) accounted for a deal at Rs. 67-8 and Titaghur paper (Ordy.) Rs. 14-2.

Banks & Railways.—Imperial Banks shares kept steady at Rs. 1,230 and the Contributories were quoted Rs. 295. No business was reported in other bank shares. A fair turnover resulted in Light Railway shares at full rates. Ahmedpur-Katwa changed hands at Rs. 70, Bukhtiarpur-Behar Rs. 75, Hardwar-Dehra Rs. 100 and Shahdara-Delhi-Saharanpur Rs. 106.

Government securities.—This section opened steady on Tuesday after the holidays, but eased off slightly as the session progressed. Towards the close, a better tone again prevailed, and the market closed steady. 3½ per cent. Government Paper was quoted at the close Rs. 87-4, 4 per cent. 1960-70 loan Rs. 99-4, and 5 per cent. 1945-55 loan Rs. 122-12. Other loans also kept more or less steady. The Bank rate remained unchanged at 3½ per cent.

Teas.—The undertone continued steady although a limited turnover resulted. Bishnauths changed hands at Rs. 19-4, East India Rs. 10, Hattikhira Rs. 12-4, Huldibari Rs. 16-4, Sapoi Rs. 8-4 and Tukvar Rs. 21-4.

JUTE.

(By our Correspondent.)

Thursday Evening.

Since reporting last, the jute market has ruled very steady and a sharp rise in values was recorded. Business was done in May Futures up to Rs. 28-8. The highest and lowest during the period were Rs. 28-8 and Rs. 26-8.

During the earlier period a rise was noticeable due to dry weather. Plenty of rain, however, is reported from the jute growing areas, so much so that, for sowing operations dry weather was again needed. Sowing operations are now proceeding quite satisfactorily. According to the weekly bulletin issued by Messrs. Sinclair and Murray, sowings for the week ending April 15, were:

	This year. Annas.	Last year. Annas.
Narayangunge	5	11
Chandpur	13½	14
Chanmubain	11	11½
Akhaura	3	12
Nikledampura	7	16
Sarsibari	3	...
Mymensingh	5	7
Serajgunge	9	7
Bhangora	4	2

Sowings are behind last season's in many of the jute growing districts, but the rains that fell during the last week and the subsequent dry weather will enable the cultivator to proceed with them satisfactorily now. The river levels in most of the places are higher than those of last year.

Fairly large business was done by shippers in pucca near Rs. 26-8 and also by the mills in Jat LRs and XLRs at Rs. 4-12 and Rs. 4-4 per md. respectively. The quotations at the time of writing are:

London Ready Firsts	...	£ 15 5 0
,, ,, Lightnings	...	£ 14 15 0
Calcutta Ready Firsts	...	Rs. 26 12 0
,, ,, Lightnings	...	Rs. 25 4 0
Futures May	...	Rs. 28 8 0
Jat LR	...	Rs. 5 0 0
,, XLR	...	Rs. 4 8 0

London.

During the mail week, the market developed a stationary tendency, and business was done on a restricted scale. Continental spinners picked up certain spot parcels. Fair business was done for Hamburg and Italian account.

JUTE MANUFACTURES.

(By our correspondent).

Calcutta, Thursday Evening.

Very steady conditions prevailed in the market during the week under review. An all round rise in values was noticeable. Hessians 9 porter was done up to Rs. 8-14, the lowest during the week was Rs. 8-10. Very large business was done by the mills for all positions, and the sales were fully absorbed, partly by the demand from overseas, and partly by the local bazar.

The Premier's visit to U.S.A. and the rise in the price of raw jute were, in the early stages, responsible for the strength in the jute goods market. Later, a fair support was lent by bear covering and overseas demand, coupled by the bull operation from Bombay, following the rise in cotton and silver.

Towards the end, Bombay operators have unloaded their holdings, but the same has been fully taken up by the local operators. To-day the market has witnessed a rise, due chiefly to the fall of the dollar and on the news that in order to make reflation in U.S.A., an embargo

Dundee.

During mail week, a fair business was done in the Dundee market, buyers taking mostly for their immediate requirements. Enquiries for all widths and weights are coming. Trade from America shows an improvement. Enquiry was received for linoleum hessians, sugar bags and heavy goods.

The German market has continued to remain very active in all sections. Good business in yarns was done by the cable industry.

COTTON.

(By our Correspondent).

Bombay. Thursday Morning.

The market during the period under report has continued steady but quiet. Due to holidays, there has not been much of business, but the undertone has all the same remained quite steady. The sagging tendency noticeable towards the close was due to the rise in sterling and fears of inflation in America. Technically the position is that sellers are always caught short, and the scarcity of spot lots always causes prices to go up. In spite of the weakness the trade demand is improving and speculators are mostly operating bull than bear.

The latest information goes to show that inflation in U.S.A. is a settled fact, and President Roosevelt is bent upon raising internal price levels. Taking into consideration the tendency of the past few weeks of the market, it appears that buying at every decline will prove profitable.

The consumption of Indian cotton by mills in India during February amounted to 184,547 bales, as compared with 204,561 bales in the previous month. This small reduction in consumption was spread all over the country, and should be attributed to comparatively less number of working days during the month. For the six months ending February, the total consumption of Indian cotton in India has amounted to 1,226,774 bales as against 1,191,140 bales during the same time last year, and on this basis, the total consumption for the entire season should range between 2,400,000 bales to 2,500,000 bales. The total All-India cotton exports up to March 18, have amounted to 1,452,857 bales as compared with 1,020,064 bales during the same time last year. If we add 200,000 bales as the approximate quantity that has passed into consumption otherwise than by mills, during this half season, about 2,900,000 bales have gone out of sight in India. Therefore, the balance of this years crop outturn, that is left over now, is comparatively small, and after six months, presuming that consumption in India and exports from this country continue at the present rate, the potential soundness of Indian cotton as shown by smaller supply will assert itself, though the stock in Bombay in front of the trade is about 150,000 bales more than at the same time last year.

Position in Bombay.

The position of stocks and exports in Bombay during the period September 1, to March 18, 1933 was:

	1932-33.	1931-32.
Receipts	1,684,088	1,294,347
Exports by sea ...	1,007,791	670,616
,, ,, rail ...	84,191	...
Stocks	841,428	648,020

World Cotton Crop.

The following extract from the *Empire Cotton Growing Review* about the world cotton crop and the Empire's part in future Production will be found interesting:

During the last 30 years the percentage of the American crop to the world's total has been declining, except for the bumper crops of 1911, 1920, 1926 and 1931, and even these peaks show the same declining tendency. On the other hand, the United States consumption percentage shows a steady rise until the great slump began in 1929-30.

In the case of many commodities, such as wheat and rubber, it is alleged that the depression of the last three years has been due to excessive supplies, but that has not been true of cotton. The whole trouble in the cotton trade is the restriction of consumption which began in America, and is now the main cause of the unfavourable position of American cotton to-day.

World stocks of cotton goods are very low and there is everywhere a great unfilled demand. The only question is whether, when normal conditions return, America will be any better able to supply the world's needs. The answer is in the negative, for three reasons.

There has been no change in the fundamental conditions ruling in the American crop, except for the worse. The normal cost of production in the United States is probably higher than any other major cotton-growing country in the world. Finally, the quality of the American crop is much lower than it was before the war.

During these years of depression the total production of outside growths has held up well, and there is no reason why these countries should give up the struggle. Outside growths now represent a substantial and essential part of the world's supplies, and there is room for further expansion.

Within the range of the outside growths themselves, Empire cotton plays an important part by providing alternative supplies and checking the tendency for any particular variety to go to extremes when supplies happen to be reduced.

COAL.

(By Our Correspondent).

Calcutta, Thursday Evening.

There is no new feature to report with regard to the general demand for coal, which remains as quiet as ever. The prices are nominally as follows:—

Victoria	Rs.	4	0	per	ton.
Desherghur and Poniati ...	Rs.	3	12	,,	
Other Raniganj ... Rs. 2 4 to	Rs.	2	12	,,	
Super Selected Jherrias ...	Rs.	3	12	,,	
Selected Jherrias	Rs.	3	8	,,	
Other Jherrias ... Rs. 2 4 to	Rs.	3	0	,,	

SUGAR.

(By Our Correspondent).

Calcutta, Thursday Evening.

During the period under review the market has been dull and featureless without much business passing. The values are more or less unchanged. The quotations at the time of writing are:

Java white Ready	Rs.	10	3	6
,, ,, Afloat	,,	10	3	6
Cawnpore Ready	,,	10	0	0

Stocks in Port commissioners and private godowns are estimated at 3,000 tons while those at the main Indian ports are:

(In bags, 10 bags=1 ton).

Foreign.

During the mail week, the market in New York showed an irregular tendency. Earlier in the week, the market was easy, but a short rise took place in the middle ; spot prices rising from 2.98 cents to 3.05 cents.

Imports in London and Liverpool markets were 7.5 thousand tons against 25.2 thousand tons the same week in 1932. Stocks are estimated at 246 thousand tons against 101 thousand tons in 1932.

PIECEGOODS.

(By Our Correspondent).

Calcutta, Thursday Evening.

The market during the period under review has ruled very irregularly. The Japanese section was subjected to a fair amount of rise and fall chiefly on the reports of the anti-dumping Bill. Early in the week the market was very steady, but later declined. Speculation was rife as to whether the anti-dumping bill would become operative immediately or not, and the rise and fall in values were based on these rumours. On careful study of the details of the Bill, and the Indo-Japanese Trade Treaty, it does not seem possible that the Bills will be made effective until July next. Some place it as late as October, while a certain group anticipate it to be immediately effective. Personally, I do not see any chance of its becoming immediately effective. The rise and fall in prices, however, did not lead to much business. The offtake has remained poor, and the values also, towards the end, are easier. The only feature worth writing has been the cold weather business ; small contracts having been done in Rugs and shawls.

Imports.

The total number of packages imported into Calcutta from all producing countries, including those from Indian ports, during March are returned at 37,592 packages, *viz.* 14,380 packages from Indian ports and 23,212 packages from outside ports. This compares with 29,020 packages for the corresponding period last year ; 38,875 packages for February and 42,442 packages for January. The contraction in imports for March as compared with February is due to the reduced figures from Indian ports, as will be seen from the undernoted particulars that importations from Great Britain and Japan show substantial increases :—

	From Gt. Britain Pkgs.	From Japan Pkgs.	From Indian Ports Pkgs.
December ...	4,358	12,628	18,622
January ...	6,340	11,687	22,399
February ...	5,269	9,740	19,999
March ...	8,683	12,553	14,380

WHEAT.

(By our Correspondent).

Thursday Evening.

The wheat market in Calcutta has ruled quiet but steady, without much change in prices. There has not been any noticeable change in the internal situation.

The quotations are :

Ready ...	...	Rs.	3 10 0
Beta May ...	...	,,	3 6 6
,, September ...	...	,,	3 9 0

Foreign.

There has been a sharp rise in the U.S.A. market, during the mail week. This was partly due to the belief of the Farm Relief Bill becoming law, and partly due to the deterioration in the winter crop there. The price of May futures in Chicago are quoted near 58 cents per bushel, against 54 a week previous to that, and 47.12 cents a month ago. According to the private estimate, the winter wheat crop forecasts are estimated at 371 million bushels, against 462 million bushels in 1932 and 787 million bushels in 1931.

An encouraging piece of news received this morning is that the holdings of the Farm Board wheat are fully absorbed by May future sales. This means that the market is prepared to take up and carry the holdings which were so far carried by the Farm Board.

BULLION.

(From our correspondent)

Thursday Evening.

Gold—After ruling steady during the earlier part of the week the gold market became easy on account of the sudden rise in sterling-dollar cross rate. The market fell from Rs. 29-14 to 29-6 on Thursday morning. But later on, on receipt of the news that United States have once again placed an embargo on the export of gold, and that she is off the gold standard, there was again a sharp rise and the quotation at the time of writing was Rs. 29-12.

Export of gold continues as usual and arrivals from upcountry centres are flowing steadily in Bombay and Calcutta. Stocks in Bombay are estimated at about 3 lakh tolas and the offtake remains at 3,000 tolas.

Silver—Violent fluctuations were the feature of the silver market this week. In the early part of the week the market was very steady when it suddenly rose from Rs. 56-8 to Rs. 58-8. On the news that the question of raising silver for subsidiary coinage was not to be considered immediately, there was long liquidation with the result that prices once again fell to Rs. 67. On Thursday, the receipt of the news that America had gone off the gold standard and that President Roosevelt is being given the power to accept silver in settlement of war debts, had once again a bullish effect on the market and business was done up to Rs. 59-8 per 100 tolas.

Stocks are estimated at 7,000 bars and the daily offtake continues as usual. At the time of writing the tendency of the market is very firm, the possible reaction taking place on profit taking.

FREIGHT.

(From Our Correspondent).

Calcutta 23rd March, 1933.

Owing to the Easter Holidays the market has been practically closed all the week.

GOLD.

The Bank of England gold reserve against notes amounted to £171,839,050 on the 29th ultimo an increase of £2,207,088 as compared with the previous Wednesday. Purchases of bar gold made by the Bank during the week under review amounted to £4,693,419.

Large amounts of gold, including about £1,500,000 on the 3rd instant, were available in the open marke. Some of the offerings were secured for the Content, but most of the supplies were taken for a destination not disclosed.

Quotations during the week:—

Gold shipments from Bombay last week totalled about £900,000. The s.s. "Mantua" carries £145,000, of which £19,000 is consigned to London, £37,000 to Amsterdam, £28,000 to Marseilles and £61,000 to New York. The s.s. "Tuscania" has £318,000 consigned to London and the s.s. "Maloja" £439,000, of which 145,000 is for London, £171,000 for New York and £123,000 for Amsterdam.

SILVER.

The week has seen a rather quiet market, with an easier tendency. Although the Continent and China continued to sell, there was no great pressure, but offerings depressed prices owing largely to an absence of support. Buyers have shown little interest; America bought, but showed no desire to force the market, otherwise the demand was mainly from China bears, who sent covering orders at the lower level.

The undertone is steady, buit quiet and affords little indication as to movements in the near future.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 27th ultimo to midday on the 3rd instant:—

IMPORTS.	£	EXPORTS.	£
British India ...	12,850	British India ...	45,747

The stocks in Shanghai on the 1st instant consisted of about 160,200,000 ounces in sycee, 230,000,000 dollars and 9,840 silver bars, as compared with about 158,900,000 ounces in sycee, 227,500,000 dollars and 10,460 silver bars on the 25th ultimo.

(Continued from page 680.)

famished India, Mr. Birla is just the ideal chairman. On two successive occasions, he conducted the deliberations; and on both the occasions, each one and all agreed that the President performed his task with consumate tact and unvarying impartiality.

* * *

Sir Purshottamdas is more like Robert Browning He is vehement, dogmatic, strong-minded and assertive. His "won't" power is as conspicuous as his will power. He is sharp and final in his decisions. He is a parliamentarian of rich and vast experience; he has had that training which enables him to arrive at quick but invariably correct decisions. The members of the Federation did certainly like to be domineered over by a president of the strength and calibre of Sir Purshottamdas.

* * *

Mr. Walchand is like nobody amongst the English poets. He is quixotic, whimsical, unskilled and uncouth. He could have carried out his very points with more grace and in a less objectionable way if only he had more tact and judgment. As it is, he has done great harm to his reputation which was deservedly high in business circles. One, who was most popular with one and all, has needlessly provoked unpopularity. He has also done great harm to the Federation. The way in which he refused to allow the unattached members to organise their forces and the walk-out that ensued are clear indications to the world at large that a caucus is in power and means to keep that power at all costs. Only those entirely in the know knew that the Federation was, in a sense, tending to be caucus-ridden. Mr. Walchand has advertised from the housetops that it *is* certainly caucus-ridden. It is a most serious disservice that he has done at this psychological moment. The Reserve Bank proposal is under discussion; and the public in India would certainly like to be assured, before the Federation is made any manner of electorate for the Bank, that it would not be possible for any clique to get control of the entire machinery of the Federation. That the issue has thus been frankly laid bare to the public is the service which the retiring President has done.

* * *

My doings in Cawnpore, greatly intriguing as they were, should be postponed to next week, as today's gossip has already become too long.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

BLUFF OR BARGAIN?

Just as the world was beginning to feel that the American authorities were getting a good control over the disorganised monetary situation, a bomb-shell has been thrown by the announcement that the embargo on gold exports has been re-levied. Since the time of the first crisis, President Roosevelt has been taking resolute and comprehensive steps in all possible directions of banking, monetary and currency reform. The bank holiday terminated as soon as the minimum essential conditions had been fulfilled. In regard to the re-opening of banks, every effort was being made to ensure that only the sound ones were allowed to resume business. Measures were also taken on hand with a view to clear up the position as regards the less sound and possibly unsound banks. Through drastic legislation, a good part of the gold that was withdrawn for the purpose of hoarding had returned to the reserves. The heady increase in note issue was also arrested ; and in this regard, it is noteworthy that there has been such a large return of currency that the retirement from circulation since the re-opening of banks came to nearly three-fourths of the increase in the note issue since the beginning of the year. When hoarded currency and gold, thus began to return in a copious stream, the American authorities thought it wise to lift the embargo on gold exports. In fact, even prior to the formal announcement, facilities were being extended in the matter of shipments of gold on ear-marked account. Comprehensive banking legislation was in active preparation. It was felt that something should be done to end the divided control of the American banking system. As things stand to-day, the Government control national banks, the Federal Reserve System controls member banks; and forty-eight States having different banking laws control the non-member state banks and trust companies. There was a general recognition that while, on the one hand, unsound banks should be put out of action altogether, all sound institutions should be brought under the federal reserve system with a new plan and a more intensive and extensive programme of supervision.

* * *

The unification of the banking system and the centralisation of the control was the objective which was sought to be carried out in the banking reforms under contemplation. In regard to this matter, legal opinion was taken as to whether non-member state banks and trust companies throughout the country could be forced to join the federal reserve system. Authoritative legal opinion has, it is believed, declared that all banks and trust companies can be compelled by Congress to become members of the federal reserve; that congress has the right to pass such a law; that such a law would not be unconstitutional; that the Constitution gives the Government power to issue and control money; that such power is withheld from States; that the clause of the Constitution dealing with control of inter-State commerce gives the Government control over inter-State banking; that in exercising Government control of banks this clause of the Constitution has not even been Scratched. In these and other directions, energetic and many-sided action was being taken. Activity in this regard came to lull the world into a sense of security that there can be no recurrence of any serious crisis in America. In the latter part of this week, the world was to receive a rude and startling shock when it came to learn that America was again off the gold standard; that gold expots would no longer be permitted for the time being; and that the sterling-dollar cross-rate shot up to 3.80. What is the meaning of all this? What are the political, economical and strategic implications of this move on the part of President Roosevelt? What will be its effect on the world monetary situation? How does this effect the aim and desire of the British monetary authorities to prevent sterling from unduly appreciating? What will be the action taken, in the altered circumstances, by countries still on the gold standard, that is to say, France, Switzerland, Belgium and Holland? How will dollar prices, sterling prices, gold prices and rupee prices respond to this action on the part of the United States? Is there any special significance to be attached to the emphasis which silver has received in the manoeuvrings of America in the past month? These are the questions which have been hurled at us by numberless people in the last twenty-four hours. We have ourselves no reliable data to go upon. The information available to us does not enable us to form anything more than a hazy and vague opinion. We should, therefore, make it clear that it is with considerable diffidence that we advance our views for what they are worth. If, possibly, we come to receive some more reliable information in the next day or two, we shall undertake the issue of a Special Supplement as we did in regard to the first crisis.

* * *

At first sight, it seems to us that the difference between the earlier crisis and the present abandonment of the gold standard is that while the former was forced upon the American authorities, the latter is deliberately planned and coolly carried out. In the first instance, America was taken unawares. On the present occasion, America has taken the world unawares. Another thought that strikes us is that it is the economic issues that brought about the earlier crisis. It is strategic issues that are behind the present move. When, on March 6, America found herself pushed off the gold standard, she had to set about finding what best she could do in the situation. Now, when she has voluntarily stepped off gold, she must evidently have all plans ready regarding future action. In this broad statement of the salient features of the American situation as it was and as it is, it will be clear that the first crisis was the starting point of discussions and deliberations of what action should be taken and that the second crisis would be the starting point of such action itself. Amongst the measures considered necessary for the rectification of the American situation, it was generally believed that the country stood in need of a considerable measure of inflation, with resultant rise in dollar prices ; and that something ought to be done to remove the handicap which American producers had to contend against as compared with countries whose currencies had depreciated. Both these objectives could be fulfilled by the abandonment of gold standard and allowing the dollar to depreciate or by temporarily suspending gold standard and returning to it on a new parity of the dollar to gold. The present step taken by America is, therefore, a clear and unequivocal hint to the world that unless the leading countries make an effort to establish currency stabilisation on a basis not far removed from old parities, America, too, would not hesitate to do what other countries have done.

A cable received late on Friday indicates that there is a suggestion to the effect that as against the present value of 20.67 dollars per ounce of gold, one ounce of gold hereafter is to be valued 37 dollars. This would mean that the sterling-dollar cross rate would have to rise to as high a level as 6.20. Just at the time when statesmen and financiers of other countries are to reach Washington for discussions on world economic affairs, America has afforded a gesture which means that if others can depreciate their currencies, she can go one better than any other. In simple terms, the present action of President Roosevelt is a tactical move calculated to secure bargaining power for America in regard to the negotiations that are to take place on world currency and world economy. For a time, two differing forces were contending with each other to gain the upper hand in the United States. The prestige of what may be called City circles and the financial authorities stood for the maintenance of the integrity of the dollar at the old parity. The interest of producers, be it of agricultural or manufactured goods, demanded that the buying power of America could be restored only by the depreciation of the dollar. It is now clear that those who stood for prestige have lost and the group that stood for self-interest has won. Once prestige is blown to the winds, there is no reason why America should not out-Herod Herod in this matter of race in currency depreciation. From this point of view, we should think that the trend of the dollar in the immediate future is distinctly and even sharply bearish.

* * *

So far as countries that are still linked to gold are concerned, they are, by this action of America, placed in a most embarassing and onerous position. The weight and responsibility of international gold standard rests on the shoulders of four countries of which one alone has any special or appreciable strength. Under this load, it is not unlikely that one or two of them might find it necessary to be relieved of the worry and harassment of the continued adherence to gold. But what really is of major importance is the attitude of France in the new situation. It may be taken as certain that France will do everything possible to see that gold standard is re-established in the principal countries of the world. She cannot afford to take any other attitude in this matter. In any bargain that might be put up to France in this behalf, France would be prepared to go out of her way to meet the parties of the other side. England, too, should now realise that the advantage conferred by depreciated sterling would melt into thin air. She has to reconsider her attitude and she will have to be prepared to yield a point or two in any bargain that is put up. In other words, just as Britain was hoping that her new erected tariffs and her divorce from gold would be great bargaining points in her favour, America has stolen a march and played the same game in a manner in which the advantage as regards bargaining has been, in part, shifted from the United Kingdom to the United States. The discussions that will take place in Washington are, therefore, to be conducted amidst realities presented in a new and grim setting. We are hopeful that the statesmen will not leave the American shores before they have decided on a concrete and definite plan of international action. If America had intended, by her present action, to make the world sit up, think and come to quick action, we should consider that the move is sure to be justified by results.

* * *

So far as dollar prices are concerned, the sentimental and psychological factors have already produced a striking result. A mild boom is being witnessed across the Atlantic. If depreciation of the dollar should be on the scale suggested, the boom will prove to be of more than a transitory nature. Sterling prices will, however, be adversely affected. Gold prices will be even more adversely effected. As regards rupee prices, there are special circumstances which have to be taken into account. In the first place, the tendency of commodity prices in India has been to follow the price of silver. As silver has been rising from strength to strength, with a good spurt after the publication of the news from America, this has been interpreted as a favourable factor as to the economic conditions of the Indian masses and as resulting in an increase in their purchasing power. From this point of view, some of the commodities have shown an appreciation in value. When Britain went off the gold standard, the market operators in India construed it as a bullish factor for Indian commodities. With the depreciation of the sterling and the corresponding depreciation of the rupee, it was thought that American buyers of India's staples would find the rupee prices more favourable ; and that, therefore, there should be considerable buying enquiry from the United States for Indian produce. This hope did not materialise. On the other hand, as the economic situation in America suffered serious deterioration as a result of the developments in England, the buying power of the United States was greatly crippled. Far from America being able to take the advantage conferred by the depreciated rupee, it was found that she had to buy on an even more restricted scale than in the months prior thereto. If, therefore, depreciation of sterling did not result in any expansion of our business with America, it is now argued that the depreciation of the dollar should have the effect of enabling America to buy more from India. The argument used in this connection is somewhat as follows: If the depreciation of sterling made the American economic situation worse, the depreciation of the dollar must have exactly the opposite effect. In other words, prices in America must rise ; the purchasing power of the masses must increase ; and there should be a higher level of prosperity and a greater degree of activity in all the markets. With greater activity in the commodities produced by America and with greater purchasing power on the part of Americans, it follows that such Indian commodities as are essential for the United States are assured of increased business. It is on some such view that jute, jute goods and jute shares have been recording substantial rises since mid-week. In regard to those commodities in which India is a competitor with America, to the extent that dollar prices will prove more attractive, rupee prices might have to see lower levels. But speaking generally of all commodities, it may be said that so long as this upward trend in silver is maintained, both businessmen and the general public in India are apt to look forward to future developments with some measure of optimism. As for money, exchange and giltedge markets, we believe that the intrinsic position of the Indian Treasury is so sound and so satisfactory that no unfavourable repercussions need be apprehended. Nor need there be any fear that there will be any setback as regards gold shipments from India. Which means that the future should see, in the monetary world, a replica of the conditions prevalent prior to America's second abandonment of the gold standard.

THE ANTI-DUMPING BILL.

The Anti-Dumping Bill which was passed by the Legislative Assembly without a division in the middle of last week had long been foreshadowed ; and the occasion can cause little surprise either amongst the public at large or amongst the interests affected thereby. The events and developments of recent times showed clearly that before long India would have to take definite steps against the danger of allowing all her markets to pass more or less wholly into the hands of Japan. In spite of the

attempts made in various quarters to make out that the Anti-Dumping Bill has a wider purpose, let it be admitted frankly that it has been necessitated by the activities of Japanese exporters in the Indian markets. We had, on the various appropriate occasions, pointed out that the competition of Japan in the Indian market must grow doubly keen as, in the first place, she had taken advantage of the depreciation of the rupee to buy Indian cotton at a cheap price and thereafter found in the depreciated and depreciating yen an invaluable advantage in marketing her goods in our markets. Though, for obvious reasons, Indian opinion has long regarded Great Britain as the arch-enemy of India's industrial progress, it should be clear even on a superficial examination that a more formidable danger lies in the East ; for Japan is the only country in the world which combines the advantage of Asia's low standard of living with the high equipment and skill of the Western industrialists and industrial workers. These are advantages of which no one in the world can make a legitimate grouse. Add to this the adventitious aid of purchase of raw material from a country with a depreciated currency and the stimulus to exports derived from a lower exchange, the position for Japan's competitors become well-nigh hopeless.

* * *

The increase in Japan's exports of cotton yarn and piecegoods first opened the eyes of Bombay and Lancashire to the new comet on the zodiac. It is natural that protection for the Indian cotton mill industry should have, to a large extent, gone hand in hand with a measure of preference for Lancashire. But the phenomenon, against which the new Anti-Dumping Bill is now directed has a far wider application. The number of minor and small industries such as sugar candy, hosiery, boots and shoes and toys and trinkets have now been threatened with extermination by Japan's impetuous attack on the Indian market. As even some sections of Japanese opinion admit, the Japanese exporters have themselves to thank for the unanimity with which the Anti-Dumping Bill has been demanded by Indian commercial opinion and has been passed since by the Assembly. At the foot of this article we give certain statistical tables whose relevancy to the question on hand is too obvious to call for pointed explanation. It will be seen that the trade between India and Japan has rapidly passed from a favourable balance of 16.75 crores in 1928-29 to merely 61 lakhs in 1931-32. The total figures for the last financial year are not yet available but the trend during the first 11 months of the year is unmistakable. The year opened with an unfavourable balance of 89 lakhs which rose to as high as 8.40 crores in November last at which level it has fairly maintained itself. The net result is that against a favourable balance of 16.75 crores in 1928-29, we have in the first 11 months of 1932-33 an unfavourable balance if no less than 58.60 crores. No Government or people can possibly view this rapid reversal with any feeling of equanimity ; and no one can be surprised if the Associated Chambers and the Indian Chambers of Commerce should alike demand that the Government should arm itself with powers to deal with this situation.

* * *

With the general need for such a measure as Sir Joseph Bhore put through the Assembly last week, nobody can quarrel. But it is often the case that it is just these generally agreed measures that call for qualification and comment. In the first place, an import duty bill designed to meet the threat of dumping suffers inevitably from the difficulty of timing accurately. It invariably provokes forestalling which robs of its immediate value an admittedly temporary expedient. In the case of Japan, the Indo-Japanese Trade Convention of 1908 requires a formal notice of six months for its abrogation ; and without such formal abrogation, the Government of India would be powerless to take any drastic action against that country. If Japanese exporters are to have an open door in India for another six months, and if, as is not unlikely, they are to make the best use of this period of preparation for economic welfare, then the import duties bill might well prove the most typical instance of locking the stables after the steed has been stolen. At this time, one could not help wishing that the Government had shown more foresight and prepared for this contingency by taking steps in time to give notice to Japanese Government in regard to the treaty of 1908. One is almost tempted to feel that reasons of high policy had intervened to delay what was assuredly an inevitable decision.

* * *

If the time and manner in which the Government have acquired their powers leave much to be desired, there is equally reason for apprehension as to the manner in which such powers would be exercised in future. The public would most naturally ask the question as to which of India's industries would be the beneficiaries of this new legislation. The cotton mill industry has always had the lion's share of the sacrifices of the Indian consumer. And on this occasion, too, the millowners of the Western Presidency have not been less passionate or importunate in backing their claims. We would be the last to underrate the extent of the danger that Japanese imports signify to India's foremost staple industry. Nor do we view lightly the prospects of Indian mills suffering a severe setback from the progress of recent years or being embroiled in wage disputes through the only measure of economy they have known, namely, reduction of wages. But it is certainly high time that the Indian people refuse to be stampeded into the grant of yet further protection for the cotton mills merely on the plea of Japanese dumping. Economically viewed we could see no difference between discriminating protection an indiscriminate *swadeshi* on the one hand, or, on the other, the sentiment of Buy Indian and the necessity of safeguarding from Japanese dumping. In every case, the consumer has had to foot the bill ; and the time is come when the regime of unilateral application is put an end to and the cotton mills forced to recognise that, if they expect the consumer to reserve all his patronage for their products, the consumer is entitled to demand that the mills satisfy every criterion of economic production. We regret we see as yet no sign of anxiety on the part of the Govern-

BANK OF BARODA,

ment of India to defer to the feeling that is now gaining ground in the minds of the Indian public. In this context we must confess to a disappointment which we have curselves been subject to. We have always urged in defence of protective measures that competition amongst the producing units within a country is as valuable a safeguard of the consumer's interests as competition between them on the one hand, and foreign producers on the other. But the evils of uneconomic management seem to be so widespread amongst the Indian mills that this safeguard has so far proved more or less utterly ineffective. Is it not time that, before further protection is afforded to the Indian mills, prominent associations should be compelled to give an undertaking that prices would be reduced by a certain percentage before a given date? It is up to public opinion and the Commerce Member, who in these matters should be deemed to represent the consumer, to take advantage of the present position and make good a sad omission of the past.

* * *

The position of the minor industries is different. They have never had that riot of protectionism which has fallen to the lot of our cotton mills. In the regime of high import duties, which followed the financial stringency of the Government, many of them have been able to steady themselves. But the avalanche of cheap imports from countries with a depreciated currency threatens to bury them in ruin. It is necessary, however, to be clear about the reasons for which protection should be afforded. The British analogy of the Safeguarding of Industries and Emergency Import Duties Acts has been freely quoted in India. But it is well to realise that in Great Britain the outcry against dumping is on the ground that the exporting country has a lower standard of living and, if the standard of living in Great Britain is to be maintained her industries should be afforded protection from the competition of countries with a lower standard of living. In other words, the rules of free trade are not to apply in the case of countries which cannot afford as high wages as Great Britain. It is obvious that the only ground on which dumping can be objected to is that the goods are sold at prices below their economic cost of production. For in that case the importing countries cannot safely rely on the continued supply of goods at that level of prices, and the only result of allowing dumping to continue would be a disorganisation of the economic structure and machinery of the country. The difference between Great Britain and India as regards the comparatively modern phenomenon of dumping should be obvious to everybody. In India, we cannot contend that Japan has a lower standard of living than ourselves or that goods are being sold in our markets below the cost of production. A prominent Japanese industrialist has pointed out in a press interview that what has happened in the case of Japan is not that actual losses have been incurred but that Japanese industrialists have willingly foregone profits in the desire to extend markets and increase output. To the extent that Indian industries cannot go on unless they are prepared to continue to make some profits, the sale of Japanese goods for the mere costs of production would constitute a case of dumping. But our objection to the continued entry of cheap Japanese goods is not on technical grounds connected with dumping but on the broader principle, which is quite understandable, that in the straits to which the

various departments of India's ecenomy have been reduced the consequences of dumping would be too grave to be regarded with unconcern. The import of cheap canvas shoes from abroad, for instance, has rendered destitute one of the lowest classes of the country's population. Likewise, other industries like sugar candy have felt the impact of Japanese dumping; and we are living in times in which any accentuation of the existing disorganisation must be avoided at all costs.

While the general principles of the Anti-Dumping Bill are, thus, unexceptionable, it is necessary in the public interest that the imposition of new duties must be subjected to a procedure which will ensure circumspect action. We make no apology for recalling here our remarks on this question in our issue of January 14, 1933 :

> "The Government is always a quack in economic matters. To invest it with wide powers to act, without consulting those competent to judge these questions and with no more safeguard than the necessity of ratification by the Assembly is a cure which is more dangerous than the disease itself. . . . If we are to afford protection to numerous small industries, it must be done as part of a comprehensive policy which, at any rate, the Government should be forced to evolve without any further delay. In any case, there should be no further departure from the policy of affording protection only after due reference to the Tariff Board. The enquiry may be expedited where necessary, but never altogether dispensed with."

We are gratified to note that in the Assembly debate on this question the suggestion was made in favour of the creation of an expert body to advise the Government on the exercise of the powers conferred on them by the Anti-Dumping Bill. We do not see any reason why the Government should dispense with such expert guidance. We believe that the submission of any new proposals of increased import duties to the scrutiny of an expert body is the least that can be done by way of avoiding an indiscriminate sacrifice of consuming interests to the clamant demand of the industrialists.

THE INDO-BURMA PETROLEUM CO., LD.

The accounts of the Indo-Burma Petroleum Company, Limited, for the year ending December 31, 1932, reveal a slight falling off in revenue, as compared with the preceding year; but owing to a smaller allocation to taxation reserve the divisible profit is Rs. 114,000 higher. The dividend distribution has been increased to 15 per cent. against 13¾ per cent. previously.

That the Company has been able to show satisfactory results, in spite of the severe depression, the continued fall in oil prices and the wasteful competition due to the dumping of Russian and Roumanian oil at uneconomic prices, is entirely due to the extremely favourable position of the Company's crude oil production. The decline in output of its Yenangyaung field has been more than offset by the large yield from the Langwa wells. The Langwa field, which is now the mainstay of the company's activities, is a marvel of engineering achievement; for it was completely hidden in the bed of the Irrawaddy River and the oil area had to be reclaimed by means of a training wall, the construction of which entailed considerable capital expenditure. The Board has always pursued a courageous policy in searching for and developing new sources of crude oil; and while the Hessford Development syndicate turned out a miserable failure the Langwa field has proved a prolific reservoir of oil. The discovery of Langwa is a landmark in the history of the Company; for it changed the entire outlook of the Company; and, far from having to grapple with the problem, which at one stage threatened it, of diminishing supplies of crude oil, it is now in possession of ample reserves of oil at Langwa and at Indaw and is able to restrict its drilling activities to the absorbing capacity of the markets in India and Burma. The Indaw field has recently been proved capable of yielding large supplies of crude oil; but its intensive working is kept pending improvement in the conditions of the market. The Company has installed improved distillation plants in the Refinery in order to keep pace with the constant improvement in petroleum technique. The development of Langwa and the modernisation of the Refinery are together responsible for capital expenditure during 1932 of Rs. 32 lakhs.

The Company is registered under the Indian Companies Act 1882 with Rupee capital and has an Indian Director on its Board. Considerable increases in capital have been effected during the last decade, an issue of Rs. 50 lakhs 7 per cent. cumulative preference shares seven years ago having been followed, in December, 1930, by an issue of 50,000 ordinary shares of the face value of Rs. 40 each at a premium of Rs. 40 per share, the premium so realized of Rs. 20 lakhs being placed to the credit of Reserve account. All the funds of the Company are invested in the undertaking itself; and unlike the Burma Oil Company it has no liquid investments in government securities and the like; nor has it any holdings in oil companies operating outside Burma. If capital expenditure on the present scale is to continue an early issue of fresh capital would be inevitable.

The ordinary shares, which are now quoted at Rs. 86 (cum Rs. 4 final dividend) appear to be moderately valued; but in view of the uncertain outlook for the oil industry throughout the world and the unsettled marketing conditions in India as a result of Russian competition, it is difficult to offer any opinion on the prospects of an early recovery in their price. The 7 per cent. cumulative preference shares of Rs. 100 each are now quoted Rs. 101 and, considering the preference dividend is covered five times over by the net revenue, these should be deemed an attractive security.

The issue of fresh capital the need for which was pointed to earlier would be greatly facilitated if the prospects of the company could be bettered by a measure of protection for companies working in this country with a rupee capital. One cannot help feeling in this context that all the indigenous oil companies were tarred by the same brush in the Tariff Board enquiry into the question of protection for the oil industry. The claims of the rupee companies must be deemed to be on a slightly different footing from that of the companies with their capital in foreign currencies.

Since I wired my last week's gossip from New Delhi, I have had a most screaming time—heaps of work intercalated with plenty of fun. I was most particular in being in Delhi at least on the closing day of the spring session of the Assembly, just that I might gladden my eyes and warm my heart by a look at the two youth leaguers who are now the President and Deputy President and who have, over these years, shown me special regard and affection. Delhi, the Mausoleum of Empires and the haunt of old memories and historic associations, would now appear to be transforming itself into the birth-place of resurgent youth. Ever since Gosh and Chum (short for Mr. Tulsi Charan Goswami and Dewan Chamanlal) entered the Assembly eight years ago and demonstrated that legislators need not, necessarily, be sombre, sedate and grey-haired, but can, with advantage to themselves and all else, be gay and sprightly and even boisterous, the Olympian centre has come to be a thing of colour and life and vivacity. Sir B. N. Mitra once described Dewan Chamanlal as the juvenile member for labour. Chum shot up from the seat and shot out the repartee: "Is the Hon'ble Member for Industries and Labour in order in taking advantage of his age"? In fact, age is at a discount in Delhi. Age is an object for tolerance; in many cases, it provokes amused contempt. Fossils have been pushed into the background. Such men of age as wish to win recognition have, perforce, to affect the gambols and even frivolities of youth. A member, ripe in age, had to seek admission to the band of young devils through the companionship of a fairy whose friendship, Platonic or otherwise, he had cultivated. Another member, past middle-age, was rudely pulled up in an affair more worthy of young, red-hot blood. Old Delhi may yet continue to be an asylum for the old cronies. But New Delhi has no place save for those who can, Puck-like, enjoy fun and frolic.

* * *

Mr. Shanmukham Chetty, the President, was my contemporary in college days; and Mr. Abdul Matin Chowdhury, the Deputy President, is, by comparison, a mere *chokra*. In his wig and gown, Chetty looked interesting and piquant while the occupant of the chair is expected to look respectable and dignified. Matin was in the first seat on the Opposition benches, ahead of Sir Hari Singh Gour, the leader. Sir Frederick Whyte, the first President, was dignity personified; he looked dignity, oozed dignity; and dignity came natural to him. Though those who knew him in private life would have thought that Mr. V. J. Patel, the next President, was irrepressibly humorous and light-hearted, his pose of dignity while in the chair was complete; he was a great dissembler. Sir Ibrahim Rahimtulla, the immediate predecessor of Mr. Chetty, had three score years and ten to lend him the natural air of dignity. But Chetty, alike by age and past associations, should find it difficult—and, I think, he does find it difficult—to maintain that unperturbed calm and poise which has become traditional in one filling the chair. His eyes wander all over the gallery; and he beckons to this member and that; and, altogether, one could see that despite the succulent salary and admittedly high status, the Presidentship is bound to prove irksome to youngsters who cannot outgrow their pranks.

* * *

I, for one, did not see any incompatibility between Presidentship and springhtliness; it rather seemed to me that the proceedings were more lively with a lively president; and members were, on the whole, in better trim and more hearty temper. The Anti-Dumping Bill was the topic under discussion as I watched the proceedings from the President's gallery. Far from there being any bitterness or rancour, there was the friendliest banter and the most enjoyable leg-pulling. For this change in the tone and temper of the House, a youth leaguer in the chair may claim some share. Mr. B. Das made quite a sensible peech. Sensible, that is to say, as to matter but not quite so, as to the length of the oration. He made out a good few points in quite a pointed way. Mr. S. C. Mitra followed with a speech which was in good form. What about the consumer?—they asked. Industries in India have been receiving good and generous treatment from the legislators; but are the industrialists paying due attention to the interests of the masses and of the consumers? This question was gently put and not hotly pressed. And a member, pointing to Mr. H. P. Mody, said in effect: Here is the President of the Bombay Millowners Association and the stoutest propagandist for swadeshi cloth appearing in the Assembly in Western sartorial style and, on most occasions, in foreign cloth. When he asks the consumer to pay a stiffer price and exercise his preference in favour of *swadeshi* cloth, why should he not realise that an ounce of example is better than a ton of precept?

* * *

Incidentally, I must place on record two of the best jokes that I heard in the lobby. The Secretariat is now run, I was told, by Madrasees, Parsees and Chaprasees. To which the answer was given that the legislature is run for the benefit of Modys and toadies. Do you think that great fun of this kind is possible except in a House where juvenile enthusiasm and mischief is rampant?

* * *

To return to the Anti-Dumping Bill. While a few members did remember the plight of the con-

sumer and did put in a strong word for him, all the M. L. A.'s agreed in emphasising their fullest confidence in Sir Joseph Bhore, the Commerce Member, to whom—and to no one else—they would be willing, they declared, to entrust the drastic powers contemplated in the Bill. Sir Joseph assured the house that he was fully aware of the confidence thus reposed in him and the responsibility that such confidence, meant. And after a little more of pleasant and mildly unpleasant exchanges of compliments and otherwise, the Anti-Dumping Bill became an Act in record time.

* * *

It speaks volumes for the efficiency and enterprise of the department presided over by the Member that, at such short notice, they could have brought out a bill of this kind, ready in time for consideration in the closing day or two of the session. It is, at the same time, a token of the utter friendliness that the industrialists may be sure of receiving at the hands of our legislators. It is to be hoped that our industrial magnates will bear this friendliness in mind and play the game by the country and by the consumer and by the masses. I cannot help recalling the sentiment that prevails in regard to the unsatisfactory attitude of the leaders of industry towards questions other than those in which they are directly interested. There is certainly an impression abroad that the industrialists are having everything their own way ; that they have merely to ask to be sure of receiving ; and that, however, they have not so far shown anything like a higher patriotism or a real solicitude for the public at large. It is up to our businessmen to see that apprehensions of this kind are nipped in the bud. The country has stood by them , the Opposition benches in the Assembly have stood by them ; and they have jolly well to stand by the country and to show that their patriotism is not merely confined to the immediate concerns in which they have a stake.

* * *

From the spring session of the Assembly to the Easter session of the Federated Chambers. In the Federation, too, age and youth are at loggerheads. I may not, perhaps, be exactly correct in putting matters this way. For, I realise, Mr. G. D. Birla, for instance, is barely of my age. And there are some committee members like Mr. Currimbhoy, who are, relatively speaking, mere lads. On the other hand, the party of the opposite side has in its ranks such men as Pandit K. Santanam, who passed his teens long ago. It would, therefore, be more correct to say that there has been growing, in the Federation, a real and distinct Opposition Party ; amongst the prominent members of this group should be mentioned Mr. A. D. Shroff, Mr. Jevanlal C. Setalvad, Mr. J. J. Kapadia, Pandit K. Santanam and Mr. H. P. Bagaria. *Roy's Weekly* described me as one of the leaders ; but I must disown the compliment. I am mostly a spectator and never a participant. The utmost I am capable of is pulling the strings from behind the scenes on sundry occasions. I am mostly content with interjections or raising minor points of order or information. I have never made a speech in the Federation nor, let me add, have I been asked to speak, though I am one of the very few delegates who have attended every session of the Federation since its inauguration. It came to pass, however, that I was obliged to figure more prominently than I, as a publicist, would have liked.

* * *

The opposition believes that the members of the Committee have made a family arrangement of things for themselves; that new members to the Committee are elected only if they prove acceptable to the King-makers; and that the minority must be put down with a strong hand. Last year, the fight was over a resolution which was construed as a toning down of the attitude of the Federation towards the Round Table Conference. The bone of contention in the present year was over the elections to the Committee. The session began on March 14, at 11 A.M., and was expected to be concluded by the evening of March 15. It was announced that the ballot papers would be issued in the afternoon of the very first day. It was urged on behalf of the Opposition that the Committee Members were well entrenched as regards their voting strength; that they had come to Delhi a day or two prior to the meeting; that they had the fullest discussions amongst themselves and arrived at the necessary plans; that most of the members had control over some chamber or other and were thus assured of four votes apiece; that typed copies containing the names of members to be voted for had been furnished by the Committee Members to their followers; that, in short, the Committee had made full and detailed preparations for their coming to power again; that the members outside of the committee and their followers met each other for the first time on the noon of March 14; that they had no time to have any free and frank discussions among themselves; that the unattached members should also be given an opportunity for such exchange of ideas and for the formulation of definite plans; and that the elections should, therefore, be held on the second day. As a matter of fact, elections in the earlier years of the Federation used to be held as the last item in the agenda.

* * *

The Heavens would not fall if there was postponement by a day. Appeals couched in the most courteous terms were made to the President to agree to the change. Mr. Walchand Hirachand who was the President was adamant. All appeals were in vain. Mr. Shroff begged of him to take the sense of the House and agree to abide by the decision of the House. To which also Mr. Hirachand said, No. The Opposition felt that the President was arbitrary and high-handed and walked out of the meeting, deciding that they would not take part in the elections. I have been very careful in this part of the narrative, as I was myself one of those who walked out and as I do not wish Mr. Walchand or his friends to think that I am taking undue advantage in this column to say hard things about them. But, I know, for a certainty, that many of the colleagues of the Chairman were themselves convinced that he was, to put it mildly, impolitic in trampling underfoot the rights of the minority. In all my varied career, I have been present at umpteen meetings. I have watched the conduct of chairmen of all sorts. But I have to say, with extreme regret, that I have never seen such unconciliatory and intransigent conduct as Mr. Walchand showed fit to display in the last session of the Federation.

* * *

I have seen presidents and presidents of this very federation. Mr. G. D. Birla conducted proceedings in the most ideal fashion. Sir Purshottamdas Thakurdas domineered over the whole show but made everyone perfectly satisfied with his firm but correct rulings. Mr. Walchand is the first President whose rulings have given rise to open revolt and un-concealed condemnation.

* * *

Mr. G. D. Birla, both as a man and as President of the Federation, reminds me somewhat of Tennyson. Tennyson is sweet—all too sweet—sweet almost to the point of satiating. Those, who have read Shakespeare or Marlowe, Keats or Shelley, Robert Browning or Rossetti, would feel that Tennyson is overdoing perfection itself. One almost comes to yearn for a little ruggedness and turgidity of rythm, a little less aptness of rhyme, for a little more pep and pepper and pugnacity. One cannot make a meal of *luchoos* and *rusogollas*. *Bhajias* with hot *chutney* are all the more welcome. Mr. Birla, like Tennyson, is cloyingly and elaborately sweet; but to a sugar-

(*Continued on page 669.*)

THE READING ROOM

For Easter, I voted myself a feast of books. I have been stuck to my armchair all these days in which my colleagues and friends had been staging walk-outs in the Federation of Indian Chambers of Commerce at Delhi. The scene of the old Legislative Council, a docile and invertebrate predecessor of the Swarajist Assembly, is apparently modernising itself. But that is by the way. For the feast I had voted myself, as I said, I was lavish enough to choose some of the oldest and choicest vintage. The bookstall, which I visited, afforded me a very modern edition of M. Madelin's *Figures of the Revolution*. No one who has read the "History" could resist the attractions of a volume on those who figured in it. Of the principal characters of that sanguinary drama, which was played in France in the decade following 1789, there are, indeed, endless monographs written by modern authors. I doubt if Lord Acton ever wrote any such; but John Morley was pretty prolific. And so has been Mr. Hilaire Belloc. But neither got so near to the hearts of Danton or Marie Antoinette as to enable the understanding of the superhuman achievements and inhuman horrors of the Revolution through the mainspring of essentially human psychology. Even the French authors have either not attempted it or altogether failed in it. Madelin alone, to my mind, saw the workings of the revolutionary mind as in the palm of his hand. Not for him the nervous, unthinking outbursts of Edmund Burke about the passing of the age of chivalry, or the blind adulation of Fox who hailed the storming of the Bastille as "much the greatest event that has ever happened in history". Nor even the colourless chronicling of, say, the Cambridge Modern History. Madelin's chief aim was to get at the character and psychology of the figures of the Revolution, their strengths and their ineptitudes, their idealism and opportunism, their cowardice and their dare-devilry, their heroism and their monstrous depravity. The task is not easy. It involves wading through a mass of unofficial documents, letters, notes in diaries, etc., etc. But it is just the accomplishment of this that gives M. Madelin's works their rare charm and incomparable value. Nothing else enables you to understand the reactions of demagogues to new and unexpected developments. Nowhere can you find means of appraising the element of fatalism in the anarchy which held France in its grip for ten long years. Make as much allowance as you will for a too active imagination or a too detailed imagery, and you will still value the intimate acquanintance which M. Madelin establishes for you with Mirabeau and La Fayette, Brissot and Danton, Marat and Robiespierre, Barras, Tallien and Sieyes.

To recall the scene, the plot and the cast of the French Revolution is not without its interest in India to-day. Here we have a vast mass of ignorant, illiterate humanity, seething with discontent, the prey of countless age-old oppressions in which foreign dominion comes almost last, helpless in the grip of poverty and so far denied the means of distinguishing true and wise guidance from false. At the top is a small class of intellectuals, bred, even as were the leaders of the French Revolution, on the social philosophies of the West, but as yet strangers to the arts of Government. Slowly they are being elbowed out of power by a new class, sprung from the lower rungs of the religions and social ladders, but stronger than their predecessors for that very reason. The new legislatures will witness the first meeting of India's Third Estate. If the sectional animosities which have been assiduously fanned during the last few years begin to flare up in the new regime, the resulting conditions would not be quite dissimilar to the conditions that ruled in France. It would do every Indian good to scan the pages of M. Madelin's works and understand the upheavals in France through the psychology of her leaders. Much will depend on the personnel of Indian leadership in the years to come. And, may be, the presence of the third party, as the foreign Government is often referred to in recent political discussions, would not be as much of an evil as it is regarded to-day.

In one respect, however, it must be admitted, the revolutions of the future must differ from those of the past; and that is the importance which leaders and led will attach to the economic value of every change. It is not a mere accident, nor is its significance restricted to Russia, that the overthrow of Czardom led to the establishment of a communist dictatorship. That the anarchy of revolution must yield place to autocracy is as certain as night following day. But the emphasis on economic plans and ideals makes a world of difference. The most reliable antidote to unbridled communalism is the certain insistence of each community on tangible improvement in its economic conditions. The days of mere political leadership are gone. An orator has already come to be viewed as a relic of an irrational past when men were swayed by mere emotions, in fact, asked for being taken off their legs. But now the Congress has its acid tests, from which many, who would otherwise have been in its vanguard, have discreetly withdrawn. The Government has endless committees into which everyone who is not sufficiently in oblivion is mercilessly thrust. It is alright, so long as you are content to put your signature with the majority or minority. Time was, indeed, when there was a premium on such docile members. But that Time will never be, to recall Friar Bacon's Brass head. If the committees of the future are to deal predominantly with economic questions, and if the test of a politician is his work in the committees, should we not have a sort of night school for busy businessmen and professionals to learn some correct notions of economics?

Economic knowledge amongst our businessmen and our politicians to-day is largely of an *ad hoc* character. It was got to order in the days of the ratio and the reverse councils. And later, what with the numerous questions coming one after another, a Federation in which businessmen, had to cross swords with the Finance Member and the Commerce Member, and last, but not least, a journal to write about them week in and week out, the *ad hoc* securities in the reserve of current controversy have been expanded very appreciably. But however numerous the patches may be, the knowledge as such is still patchy. It lacks scientific basis and a scientific correlation. And I have all along been on the look out for a book which will not insult the intelligence of its elderly readers by being too elementary, but not flatter them either by attributing to them a knowledge which they do not possess.

One delightful dish in my Easter fare is the *Economics of a Changing World* by H. V. Hodson. A testimony which will appeal better than mine to those, to whom I recommend it for careful study, is that of Sir Arthur Salter, who appends a preface of glowing tribute to this work. The very title calls for a world of comment. I recall to my mind the remark which a prominent businessman made to me when I was fresh from college. "You have to re-write all your economics which the war and the post-War trials have rendered obsolete". Proud of the science to which I had devoted study, I asked: "Who told you that Economics deals with static conditions"? My eyes were then opened to a common mistake which has not yet ceased to be, though it is a decade since. A science that must change its conclusions with every event in the economic world has no claim on the time and attention of an intelligent man. The fact is, that it is not the science that is changing but the world to which its findings are applied. The test of a science is the logical agreement between its data

and its deductions. Its applicability would depend on how far the data are in agreement with the conditions to which the conclusions are applied.

It is, of course, very regrettable that the selection and isolation of facts for economic study could not, in the nature of things, be as satisfactory as in the physical sciences. As Mr. Hodson says, in economics, "it is as if a student of hydrostatics or hydrodynamics had no laboratory for his researches but only a turbulent stream, in which he himself was floating." But in spite of all this handicap, the econimist's conclusions are unexceptionable. The difficulties arise only from the fact that the data assumed in their enquiries are less and less in agreement with the conditions that obtain in the work-a-day world. The true economist knows where the deviations occur. For him it is a question of shifting the emphasis from one tendency to another, as, for instance, from long term effects to short term. But the layman interprets it as an attempt to explain away old fallacies. Even certain sections of economic students are prone to believe that the science as such has erred. It is easier to explain to the latter that some of the conclusions of economics have been misrepresented and misused in current economic discussions. But the former require a more elaborate explanation to convince them that pure economics is the economics of equilibrium and that what is at the root of their dissatisfaction is the need for a clear re-statement, which can bring economics into a more definite and a closer relation with the actual process of change. The departure from the original premises of economic study has been growing more and more during the last decade. The most important modification on the conditions of free enterprise and free exchange proceeds from the abandonment of *laizzez faire* and free trade by the State and the tendency to combination and monopoly on the part of even private producers. The State has assumed a new role in the national economy which means a clog in the smooth working of the laws of economics. At the same time, the tactics and methods of private business have also changed. Dumping, in the sense of selling below cost of production, is more rife than ever it could have been in history. New inventions, new technique of production, new tastes and fashions are constantly changing the face of the economic world. These inevitably mean that the conditions in which the monetary standard can function are becoming well nigh impossible. But let us not incorrect ideas in our minds. What we want is not a changed economics, but the economics of a changing world.

Mr. Hodson has performed his task with admirable success. In the treatment of his subject, he weaves current topics and questions, new theories and fads with such a masterful hand that one is able to study the science and at the same time relate it intelligently to the controversies which impelled him to that study. The chapter on the "Price Complex" allows no under-rating of the complexity of its subject-matter. But the reader will find no difficulty in picking the threads that run through this formidable maze. Nor even when this tangle extends to the price structures of foreign countries. For the chapters on "International Trade" and "Balance of Payments" are, indeed, the best from the point of view of relating the accepted theories to present-day facts and fads. The discussions on the world depression are prefaced with a discussion of a typical slump ; and this helps to preserve a perspective which would otherwise be destroyed by our sense of current suffering. I need hardly say more. Mr. Hodson's book should go a long way to mitigate the economic dilettantism that is now rife in our country.

But I should still emphasise that no sincere student can depend solely on the study of orthodox economic books. They always need a corrective in the shape of a socialist writing. However much Mr. Hodson may endeavour to show the deviations of actual life from the premises of the economist, he would not correct the bias in favour of the individualist economy. The evils of the present system would never be adequately laid bare. The inquisitive and honest mind will still miss the true explanation of the present phenomenon of poverty in plenty. It would still hunger for guidance to the true path out of the deadlock in which the world is now imprisoned in apparent helplessness. And so far as I could see, Mr. Hodson is no exception to the general run of economists who believe that the deadlock may be opened with a key of gold.

In a series of articles in *Indian Finance* in the last quarter of 1932, I had myself endeavoured to show the inadequacy of monetary reform as a cure for the present depression. I cannot claim that the articles enjoyed any widespread attention ; but I claim they are fully worthy of it, in as much as they provided what I believe to be the only corrective to the error, in which almost all the economists of the world have fallen, namely, that of believing that, once the conditions essential for the smooth functioning of the gold standard are restored, we would experience an automatic and rapid revival. But in those articles I centred attention on questions like international trade more than the distributive system within each country. The latter is the subject of a simple but very profound and illuminating study which if it is properly understood and appreciated might well prove what it purports to be, *Foundations for the World's New Age of Prosperity*.

GREAT BRITAIN.

EMBARGO ON RUSSIAN GOODS.

From small beginnings, the Anglo-Russian disagreement has grown into a grave diplomatic crisis. Following the arrest of Mr. Monkhouse, Metropolitan Vickers' chief representative in Moscow, and five other English employees of the Company, on charges of military and economic espionage, wrecking activities and bribery, hot protests emanated from the British Government including even threats of an embargo on Russian goods. A White Paper was issued in the course of the week containing the correspondence which had passed between the British and Russian Governments concerning the six arrested British nationals, and a Bill to permit the prohibition of imports from Russia was promptly brought forward before Parliament, and has already passed the second and third readings.

There are four clauses to the Bill, of which the following is the text:

"It shall be lawful for His Majesty by proclamation to prohibit the importation into the United Kingdom of all goods whatsoever grown, produced, or manufactured in the Union of Soviet Socialist republics, or of any class or description of such goods specified in the proclamation.

Goods prohibited to be imported by virtue of a proclamation under this Act shall be deemed to be included among the goods enumerated and described in the Table of Prohibitions and Restrictions Inwards continued in Section 42 of the Customs Consolidation Act, 1876, and the provisions of that Act and of any Act amending or extending that Act shall apply accordingly.

If at any time a question arises whether any goods imported into the United Kingdom were grown, produced, or manufactured in Russia, it shall be lawful for the Commissioners to require the importer to furnish to them in such form as they may prescribe proof in respect of the country in which the goods were grown, produced or manufactured, and unless proof is furnished to the satisfaction of the Commissioners that the goods were grown, produced or manufactured elsewhere than in Russia, the goods shall be deemed to be goods grown, produced or manufactured in the said Union.

Where goods are manufactured partly in Russia and partly in some other country the goods are to be deemed, for the purposes of the Act, to be manufactured in Russia, unless it is proved to the satisfaction of the Commissioners that 25 per cent. or more of their value at the time of exportation to the United Kingdom is attribuable to processes of manufacture undergone since the goods last left Russia.

Subject to compliance with such conditions as to security for the re-exportation of the goods as the Commissioners may impose, a proclamation under the Act shall not apply to goods imported for exportation after transit through the United Kingdom or by way of transhipment.

A proclamation under this Act may be revoked or varied by a subsequent proclamation.

The Board of Trade will have power by licence to authorise, either generally or in any particular case, the importation of any of the goods, or of any class or description of the goods, prohibited to be imported by virtue of a proclamation under the Act.

A licence granted for the purposes of the Act may be granted on such terms and subject to such conditions (including the payment of a fee not exceeding £5) as the Board of Trade may think proper.

Such a licence granted for the purposes of the Act will not be transferable.

On any proceedings against any person in respect of the non-fulfillment of any contract it will be a good defence to show that non-fulfillment was due to a proclamation under the Act."

The credit of the Government cannot be said to have been enhanced by the various defences advanced on behalf of the Bill during different stages of its progress. The Government's policy in regard to the subject matter of the Bill is capable of bearing two interpretations: (1) the safeguarding of British trade with Russia, and (2) the protection of the arrested men. In announcing the introduction of the Bill, Mr. MacDonald made the extraordinary pretension that the intention of the Government in introducing it, had nothing to do with the second of these objects. He simply declared that "on April 17, the trading agreement with the Soviet Government lapses, and something must be done to set up a system of trading". Within two days, however, Sir John Simon was to throw completely overboard the elaborate pretension so carefully maintained by the Prime Minister.

A little later, Sir Austin Chamberlain demanded that the Government should clearly define for what purpose they introduced the Bill. It had been suggested that the powers embodied in the Bill might be required to enable the Government to negotiate a new trade agreement with the Soviet, but, urged Sir Austin, "British subjects were in peril of their lives in Moscow, and no other issue ought to be allowed to complicate that vital one".

"I give an undertaking" said Mr. Runciman, President of the Board of Trade, in response to Sir Austin's demand, "not to use the powers for any other purpose".

It is clear from the trend of the Parliamentary discussion on the Russian Imports Bill that the real object of the Government is to coerce the Soviet into abandoning the trial of the arrested British engineers. For the object in view, a more unfortunate step could not have been devised. As objected to by M. Litvinoff, the British demand "amounted to an ultimatum that His Majesty's Government could only maintain relations with Russia on the condition that British subjects were exempt from Soviet law and not subject to arrest and trial"; and it is unthinkable that any independent political power would allow its courses to be deflected by so ill-concealed a threat. In spite of the atmosphere of excitement and high-strung feeling engendered by the fate of the arrested Britons, there is no lack of balanced judgment to look askance at the Government's handling of the Russian situation. The *Economist*, for instance, makes the following comments on the subject: "Two British subjects were arrested in Berlin the other day. Supposing both are not released and the Government does not take powers against Germany similar to those taken against Russia, it may find it difficult to explain its reasons for not doing so. If it does take such powers the prospect for what remains of our foreign trade is not particularly encouraging". Even as it is, the prospect for what remains of British foreign trade is not very encouraging on account of the contemplated embargo, though of course Russia stands to lose no less. In the post-war period, Russia has always exported more to Britain than she has imported in return. During the eleven years 1922 to 1932 there was an excess of imports over exports in the trade between the United Kingdom and the Soviet Union to the value of £136,500,000 and there can be no question but that Great Britain is Russia's principal market for her three chief exports, timber, foodstuffs and oil, for which she cannot hope to find a ready substitute elsewhere. All this shows that Russia stands to incur a very real loss as a result of the British embargo on her goods.

On the other hand, the position for Great Britain, is equally unpromising. Russia owes Great Britain £13,000,000 for goods supplied, of which credits to the extent of £10,000,000 are guaranteed under the Trade Facilities Act, the Government's share of the liability being no less than £7,000,000. The embargo would force Russia to default, not only in respect of her direct obligations to Great Britain, but also as regards the larger volume of credits received from foreign banks indirectly through Germany, amounting to £250 millon. In

its wisdom, the embargo is tantamount to injuring oneself to spite another. It bears on its face the stamp of the ill-will of hot passion which is the enemy of cool judgent.

Real size of Budget Deficit.

The accounts for the financial year ending March 31, reveal, according to official showing, a deficit of £3,323,000 but this figure excludes the War Debt paymet to America of £19.9 millions, which is transferred to capital account. It is noteworthy that on capital account a sum of £46 millions was devoted to debt-redemption, both domestic and foreign, apart from the sum of £23.2 millions provided for meeting immediate obligations in regard to the conversion of the 5 per cent. War Loan. Of these amounts, £12 millions was available from current revenue, and the balance has had to be borrowed.

The following tables throw interesting sidelights on the extent to which budget anticipations in regard to revenue and expenditure show a prospect of being actually realised:

Ordinary Revenue, 1932-33.

Unemployment Relief.

A plea for a centralised treatment of the unemployment problem, capable of rescuing it from the slipshod and chaotic effects of the hurried legislation of 1930 and 1931 is made by Mr. Ivor Jennings, Reader in English Law at the London school of Economics, in the course of a memorandum on the incidence of poor relief prepared by him for the National Association of Local Government Officers. Mr. Jennings estimates that the number of "unemployables" seeking relief rose from 477,520 to 562,204 during the last four years. These increases have to be dealt with by local authorities, but on account of the uneven distribution of the unemployed, local authorities are, in a great many instances, hard put to it to make both ends meet. They have either to increase the rates to meet the cost of poor relief, or take it out of other services, materially curtailing their scope and utility. And yet, according to Mr. Jennings' analysis, the latter services, including for instance, the provision of medical relief, housing and facilities for school children, call for increased outlay precisely where unemployment is most rife. Mr. Jennings argues that "to ask local authorities to decrease their rates in these circumstances is utterly futile. To place the burden of poor relief upon the areas which suffer most from unemployment is the height of folly." This memorandum, besides furnishing valuable data as the result of diligent research, put the case for the reform of poor law administration and unemployment relief on unanswerable ground.

Spending By Borrowing.

The "means to prosperity" advocated by Mr. J. M. Keynes has elicited a grave warning from Sir Lawrence Phillips, Chairman of the United British Steamship Company, Ltd., at the twelfth annual general meeting of the company held during the week. The essence of Mr. Keynes' proposal was that the Government should invade the realm of business, for the purpose of relieving unemployment, by embarking on organised spending schemes,

THIS WEEKLY

ART PRESS
20, BRITISH INDIAN STREET
CALCUTTA

to be provided for by borrowing. From the parallel of his own industry, Sir Lawrence stresses the danger of the Government thinking that they know better than the businessman when and how capital should be spent. He recalls that, under the Trade Facilities Acts, the Government caused many millions to be spent on building steamers, but left to himself and without the Government guarantee of the loans, the businessman would never have incurred such expenditure. This is essentially the point of view of the self-satisfied businessman zealous for preserving his supremacy in his own particular field.

Sir Lawrence's criticism of the rationale of the Government's policy of "borrowing to spend" is more robust and less sentimental. By such a policy, no Government can, in his opinion, give employment to one extra man, because to pay that extra man they have to take the amount of his wages from some taxpayer either by taxation or borrowing, and in consequence, these taxpayers cannot employ the men they would otherwise have employed. "I would remind our young M. Ps. who may be carried away by the eloquence of Mr. Keynes," pleads Sir Lawrence Phillips, "that to borrow to spend is quite as bad, if not worse, than to tax to spend," with, however, this difference, that taxation is compulsory, while the lender hands over his capital voluntarily in exchange for a promise of interest.

This difference, it may be stated in answer to Sir Lawrence's argument, is not so slight or negligible as it is apparently made out to be. There is a world of contrast in the respective positions of the taxpayer and the subscriber to Government loans. The latter is primarily a businessman. And if he rallies in support of any official scheme of spending, it may be taken as sufficient evidence, in the ultimate valuation, of the sanction of the average businessman having been given to the reconstructive economy planned by the Government from time to time. In the absence of such sanction, the raising of capital for Government schemes would itself become difficult, if not impossible; and the voluntary basis of the contributions to official loans would work out, in practice, as a popular check on the particular programmes intended to be put into effect. This cannot be said of taxation which has to be paid whether the taxpayer approves of the expenditure of the Government or not.

Sir Lawrence Phillips is less than just in his estimate of the effect of Mr. Keyneys' scheme on the burdens borne by the taxpayer. Mr. Keynes was never an indiscriminate votary of spendng for its own sake. One very vital part of his programme of organised public spending is that every scheme included in its purview must be productive in character and capable of paying for itself within an ascertainable period. Under any circumstances, this is a sound basis for the incurring of capital expenditure. And at a time like the present when capital is cheap and plentiful, but is lying idle for lack of fruitful employment eliciting the confidence of investors, it is perhaps the least part of the merit of Mr. Keynes' solution of the problem that it is not academically unsound. Unused capital is a dead asset. By bringing to bear on it the invigorating influence of Government enterprise, Mr. Keynes has hit on the only way in which a vast amount of precious credit going to waste can be immediately turned to the profit of the community. In this, there is no taking away from anybody to anyone's detriment. A beneficial use is found for what otherwise must go unused, or at best used to very meagre advantage. And this, undoubtedly, is not a small gain.

Reorganising Iron & Steel.

A scheme for the reorganisation of the Iron and Steel industry is being considered by the National Committee of the industry. Under the scheme, a comprehensive national machinery for the industry is to be set up, consisting of a number of associations, each dealing with a group of products coordinated by an Iron and Steel Corporation of Great Britain. The purpose of the scheme is to combine in its machinery the advantages of combined action with individual enterprise, and to balance the respective interests of the producing and the consuming sections in the industry.

The functions of the Corporation, which will replace the National Federation of Iron and Steel Manufacturers, are stated to be

> To provide services of an advisory character for the assistance of its members and associations, *e.g.*, statistics, trade intelligence as to home and foreign markets and transport facilities, research, &c.
>
> To promote the formation for approved associations and to exercise such supervision over them as is necessary to secure the orderly progress of the industry;
>
> By agreement with approved associations to provide, or assist in the provision of, services of general benefit to their members, such as secretarial services, central purchasing, common marketing, research, &c.
>
> To assist approved associations in any measures calculated to promote the efficient organisation of their respective sections of the industry, including
>
> (*i*) the promotion of desirable amalgamations of existing undertakings and extensions and improvements of plant as and when required;
>
> (*ii*) the prevention of unnecessary duplication of plant, whether by existing members of the association or by other producers.
>
> To co-operate with approved associations in promoting the export trade in iron and steel;
>
> To act on behalf of the industry generally in all negotiations and other proceedings with outside interests.

In a letter welcoming the scheme, Mr. Chamberlain, Chancellor of the Exchequer, conveys the assurance that "so long as the Government are satisfied of the determination of the industry to set its house in order, they will be ready to give such support to its efforts as may from time to time appear necessary to enable this great enterprise to be brought to a successful conclusion.

UNITED STATES OF AMERICA.

ALL NATIONS INVITED TO WASHINGTON.

President Roosevelt has issued invitations to representatives of all foreign countries who wish to put forward proposals for the World Economic Conference, to confer with him at Washington.

In the first instance, Mr. MacDonald alone was invited to confer with the President. But the exclusive attention paid to the British Prime Minister—who is the Chairman-designate of the Economic Conference—seems to have been interpreted as an attempt on the part of America and Great Britain to pre-judge the issues awaiting the Conference, and force their own economic ideas on the countries participating in it. It is fortunate for the prospects of success of the Economic Conference, that this impression has been completely removed by the subsequent invitation of President Roosevelt to the representatives of all foreign powers, without exception.

Mr. Roosevelt, it is understood, will hold discussions with each representative separately, and will press for an all-round reduction of 10 per cent. in world tariffs. The President will also negotiate trade treaties with Britain and other countries, and Congress has already been asked to give him the necessary powers to undertake this work.

It is certain that the Anglo-American discussions will include the question of remission of the British War Debt, but American opinion since Mr. Neville Chamberlain's provocative outburst, seems to have become definitely hostile to the idea of any concession unless as a proved step to world recovery. The pre-

sent tendency of the U. S. Government is to keep the discussion on the War Debts as far in the background as possible.

The Banking Situation.

Mr. Woodin, the Secretary of the Treasury, has announced that 12,737 banks have reopened by the end of March, but the banking situation still continues to be far from satisfactory. The number of the banks that have been reopened with such rapidity is itself a disturbing factor. Not a few that have been re-opened, are being closed again, and the signs are that many more will have to follow suit. Even the banks that have definitely survived are finding the strain on their resources too much to bear, since large areas are altogether without any banking accommodation whatsoever, and the banks that are working are, in practice, forced to do duty for those that have disappeared as well. The natural consequence is that public credit in the safety of the banks is rudely shaken and is expressed in a constant shifting of accounts from one institution to another, hoarding having been rendered a penal offence. In view of the fact that any publicity given to the withdrawal of deposits is likely to still further weaken the credit of the banks, the Superintendent of the Banks in New York State has even thought it advisable to exempt banks from filing public statements of accounts which they are ordinarily bound to do at this part of the year.

The natural remedy for most of these financial ills is the authorisation of branch banking. So long as the Federal Reserve system stands on a footing of competition against a multitude of separate state banking systems, it is futile to hope to raise the standard of the American banking system. Unfortunately, both Congress and country are not altogether willing to initiate this reform.

The utmost that is contemplated in the shape of immediate reform is embodied in a Bill, awaiting passage through Congress, which provides for the guarantee of bank deposits up to a stated percentage, by means of a Federal Liquidating Corporation. The Bill seeks also to do away with interlocking directorships between banks and to change the personnel of the Federal Reserve system so as to bring it into closer touch with Treasury policy, and to render it effective and helpful for the funding plans which, it is understood, the Government have under immediate contemplation.

Balancing of the Budget.

These funding plans promise to be a peculiar feature of the attempt to balance the budget, taken on hand by the Roosevelt Administration. Apparently, the income budget for the coming year will be balanced, but there is to be another capital budget comprising quite a formidable series of reconstruction and relief items of which the end is still nowhere in sight. So far, these items include the enrolment for afforestation and other work, farm relief, and the refinancing of farm mortgages. The authority which the President has asked for raising a bond issue of $2,000 millions to meet the requirements of the capital budget, seems thus to be no more than a part of the price which may eventually have to be paid for the technical triumph of a balanced "income budget".

GERMANY.

BANKING POSITION.

The seriousness of Germany's foreign currency position was emphasised by Dr. Schacht, the new President of the Reichsbank, at the general meeting of the bank which was held this week to adopt the annual report.

The position of German banking, said Dr. Schacht, was still difficult, and the effects of the 1931 crisis had not yet been overcome, but the National revolution had cured the German people of the false notion that they could reach an economic haven through foreign help alone.

The Reichsbank is to repay in gold the rediscount credit of $70,000,000 which fell due on March 4 to the Bank for International Settlements, the Bank of England, the Bank of France and the Federal Reserve Bank of New York. Berlin banking circles expect that the result of the payment will be to reduce the gold cover for Germany's currency to 15 per cent. Since the beginning of the year, the gold and foreign exchange holdings of the Reichsbank have fallen by 90 millions, and stand now at 836 millions, representing a cover of 23.7 per cent. for the note issue.

A New Industrial Development.

The most remarkable recent development in the industrial life of Germany is the decision of the shareholders of the Rheinische Braunkohlgesellschaft, one of the most successful of German industrial undertakings, to amalgamate it with the Rheinisch-Westfalische Elektrizitatswerk. The decision has led to the resignation of Dr. Silverberg, the head of the Rheinbraun for the last thirty years, on the ground that the firm has lost the character of a private undertaking, and with it, the capacity for sound and independent administration. The loss of the services of the acknowledged ability and experience of Dr. Silverberg is hard to replace, but the Rheinbraun has the compensation of very advantageous terms according to the contract of amalgamation. The agreement is to run for 50 years, at the end of which period, or earlier if it is rescinded earlier, the Rheinbraun shareholders are to have the right to cash payment equivalent to 225 per cent. of the nominal value of their shares. A guarantee of 12 per cent. minimum dividend is likewise assured to them under the agreement. This amalgamation marks a change in German industrial policy in the direction of forming combines and mergers of long-standing firms of established individuality.

ARGENTINA.

The report of Sir Otto Niemeyer who has been in Argentina since January for studying the financial position of the country has submitted during the mail week the result of his investigations. Though he has covered a wide ground his recommendations for the immediate establishment of a certain bank paralleled with reformed banking legislation is no doubt the main feature of his report will be found to be of great interest in India as this country is now engaged in a similar project for similar reasons. The principal points in the report are as below :

(1) Argentina's susceptibility to economic strain is due to her dependence mainly on agriculture, with its extreme price escillations.

(2) In view of the obsolete existing conversion system, it recommends the immediate establishment of a Central Bank, together with reformed banking legislation; the Exchange Control Commission, the Conversion House and the Rediscount Commission to be absorbed by the Central Bank.

(3) For the present the Exchange Control Commission must continue owing to "regrettable necessity," but its abolition is desirable at the earliest possible moment.

(4) The world's currency confusion does not permit of any definite decision on the future value or future basis of the peso, but at the most one year after the establishment of the Central Bank dual currency should be abolished, the gold peso not being used for public, commercial or banking accounts.

(5) The report emphasises the absolute necessity for a balanced Budget, no additional expenditure and no supplementary estimates.

(6) It recommends the complete reorganisation of the complicated accountancy system.

(7) Metallic currensy to be substituted for paper below the value of five pesos.

The report advises the Federal supervision of provincial and municipal foreign loans.

COMPANY REPORTS

TRITON INSURANCE CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	5,75,000	Investments	...	47,42,488

Total	...	5,83,119	Total	...	5,83,119

Extracts from Directors' Report:

The Directors of the Deoli Coal Company submit the audited accounts of the half-year ended February 28, 1933. The revenue account shows a loss of Rs. 8,278 for the half year and there is a balance of Rs. 6,183 at the debit of profit and loss account to be carried forward. Raisings and despatches were slightly higher than in the previous half-year but considerably lower prices were realised.

PENCH VALLEY COAL CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	5,25,000	Block (nett)	...	3,44,004
Reserves	...	2,35,000	Coal	...	2,521
Debts	...	1,55,565	Stores	...	24,039
Profit & Loss	...	83,405	Outstandings	...	1,75,629
			Cash & Invests.	...	4,52,777
Total	...	9,98,970	Total	...	9,98,970

Extracts from Directors' Report:

Report for the half-year ended 28th February, 1933. The working for the half-year shows a gross profit of Rs. 1,40,474-13-11. To which has to be added:—The amount brought forward from last half-year, Rs. 7,032-10-7; dividends on Investments, Rs. 6,875; equal Rs. 13,907-10-7; making a total of Rs. 1,54,382-8-6. After providing for:—Depreciation Rs. 25,351-5-8, Reserve for Taxation and Managers' Commission Rs. 30,626-3-9, amount placed to General Reserve Rs. 15,000, equal Rs. 70,977-9-5, there remains a balance of Rs. 83,404-15-1. Which we recommend should be dealt with as follows:—In payment, on application, of a dividend at the rate of 25 per cent. per annum, free of income tax, Rs. 65,625, leaving to be carried forward Rs. 17,779-15-1.

Output of Steam Coal for the half-year compares with the three preceding half-years as follows:—

	Barkui.	Chandametta.	Total.
	Tons.	Tons.	Tons.
February, 1933 ...	30,439	44,062	74,501
August, 1932 ...	29,203	33,881	63,084
February, 1932 ...	26,935	30,971	57,906
August, 1931 ...	32,165	28,239	60,404

Workings at Barkui No. 4 are restricted, but the estimated outputs of Barkui No. 3 and Chandametta have been sold in full for the current half-year at rates which, whilst lower than those for last year, may be considered satisfactory.

The electric coal-cutting machine installed at Chandametta has proved a success, having improved output at reduced costs. It is proposed to extend the use of these machines and the additional equipment required is now being arranged for.

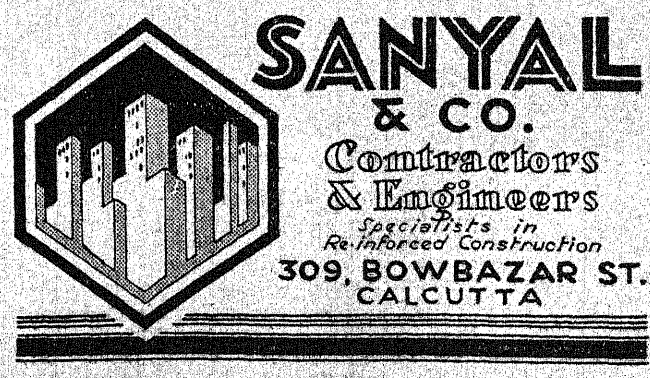
HASIMARA TEA COMPANY.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	19,00,000	Block (nett)	...	27,16,119
Reserves	...	11,50,000	Balance of 1932 crop	...	1,73,834
Debts	...	1,25,562	Outstandings	...	8,742
Profit	...	1,51,008	Advances	...	7,101
			Deposits	...	4,297
			Investments	...	1,99,918
			Cash and other balances	...	2,16,559
Total	...	33,26,570	Total	...	33,26,570

Extracts from Directors' Report:

The Directors of the Hasimara Tea Company submit their report with the audited accounts for 1932. There was a severe drought early in the season but climatic conditions were distinctly favourable in the latter months of the year, resulting in an outturn of crop of 48,576 maunds 13 seers against an estimate of 35,300 maunds and a crop of 30,842 maunds 32 seers in 1931. The crop realised, in total, Rs. 12,14,229, equivalent to a nett average of 5 annas per pound compared with 6.42 annas in the previous year. Expenditure.—Comparative figures are submitted below:—Estimated Rs. 9,73,800, actual Rs. 10,17,086. After making provision for staff commissions the total of credit balances transferred from the divisional revenue accounts to the profit and loss account is Rs. 1,86,315. The nett profit for the year is Rs. 1,08,302, arrived at after including interest received and unclaimed dividends forfeited, and after deducting bad debts, income-tax and staff furlough reserves and Rs. 50,000 representing a proportion of capital expenditure incurred in the last few years. With the amount brought forward from 1931 there remains a final balance on profit and loss account of Rs. 1,51,008, which they propose to deal with as follows:—Pay the preference dividends for the years 1931 and 1932, Rs. 42,000; transfer to general reserve account (bringing this up to Rs. 10,00,000), Rs. 50,000; carry forward to 1933, Rs. 59,008. The regulation of exports scheme provides for the export of 68¾ per cent. of the highest crop in any year from 1929 to 1932 inclusive, which for this company is 1932, but to ensure that the total quantity of tea remaining for consumption in India is not far in excess of the demand, which would have a disastrous effect upon the local market restriction of crop also is definitely essential and they are, therefore, estimating for a total of 81½ per cent. of the 1932 crop, which is the figure indicated by the Indian Tea Association as meeting both export and local requirements. Estimates for 1933 provide for a crop of 39,720 maunds tea at a local outlay of Rs. 6,28,000 and, taking Calcutta expenditure at Rs. 3,67,000, this makes a total outlay of Rs. 9,95,000.



RANICHERRA TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	5,73,750	Block	...	5,73,750

			Outstandings	...	7,033
			Cash & Invests.	...	71,856
			Profit & Loss	...	1,00,751
Total	...	7,86,503	Total	...	7,86,503

Extracts from Directors' Report:

Report for the year ended 31st December, 1932, shews a loss on Revenue Account of Rs. 47,805-2-9, add—adjustment Rs. 1,967-9-5, amalgamation expenses Rs. 2,250-1, factory alteration Rs. 15,159-1-2, motor lorry Rs. 4,564, equal to Rs. 23,940-11-7, total Rs. 71,745-14-4. Add—balance brought forward Rs. 29,004-13-11, total Rs. 1,00,750-12-3. The Directors propose to transfer from reserve the sum of Rs. 1,01,347-2-4, leaving a balance at credit of Rs. 596-6-1, to be carried forward to next account.

The outturn for the year was 10,727 maunds. The crop was sold in Calcutta and realised a price of As. 4-4 per lb.

The estimate for 1933 provides for a crop of 10,200 maunds to cost Rs. 2,79,752 subject to modification should restriction of exports and crop be agreed to by the Industry.—H. A. Antrobus, J. C. D. Naismith, D. Inglis Duff, Directors. Begg Dunlop & Co., Ld., Managing Agents.

NATIONAL BANK OF INDIA, LTD.

Report for the year ended 31st December, 1932. The net profits, after providing for all bad and doubtful debts, amount to £729,007-4-0 inclusive of £278,809-19-6 brought forward from the previous year. An ad-interim dividend at the rate of 20 per cent. per annum was paid on 22nd September last absorbing £200,000 and the Directors now recommend a further dividend at the same rate, less Income Tax. They propose to add £50,000 to the Officers' Pension Fund and to transfer £30,000 to Contingencies Account, leaving a balance of £249,007-4-0 to be carried forward:—

	£
Capital	2,000,000

NORTH DAMUDA COAL COMPANY.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	2,50,000	Block (nett)	...	1,97,100
Reserves	...	52,500	Stores	...	9,672
Unpaid dividends		15,690	Stocks	...	8,677
Debts	...	41,931	Outstandings	...	63,610
Profit	...	19,572	Investments	..	7,500
			Cash and other balances	...	93,134
Total	...	3,79,693	Total	...	3,79,693

Extracts from Directors' Report:

The Managing Agents of the North Damuda Coal Company (Messrs. Shaw Wallace & Company) submit their report and accounts for the half-year ended January 31, 1933. The working for the half-year shows a gross profit of Rs. 39,524, to which has to be added the amount brought forward from last half-year, Rs. 6,769, making a total of Rs. 46,293. After providing for depreciation, Rs. 8,928, taxation and manager's commission, Rs. 7,793, and reserve fund, Rs. 10,000, there remains a balance of Rs. 19,571, which they recommend should be dealt with as follows:—In payment, on application, of a dividend at the rate of 10 per cent. per annum, free of income-tax, Rs. 12,500; leaving to be carried forward, Rs. 7,071. Output and despatches during the half-year under review continued to be satisfactory. It is regretted that the company was unfortunate in not securing the usual railway contracts for the year 1933-34 and in consequence it has been decided to close down incline No. 7 and to concentrate on Nos. 3 and 6 for the output required. Particular attention is being paid to reduction of costs. Since the close of the half-year Mr. J. A. Haskell has resigned his seat and his place on the board has been taken by Mr. G. H. Davis. Mr. G. H. Davis retires by rotation but, being eligible, offers himself for re-election. Mr. G. H. Davis being absent from Calcutta has not signed the accounts.

BAGHMARI TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	5,50,000	Block	...	6,30,249
Debts	...	2,09,361	Crop A/c.	...	19,780
			Outlay	...	3,776
			Outstandings	...	962
			Cash	...	4
			Profit & Loss	...	1,04,590
Total	...	7,59,361	Total	...	7,59,361

Extracts from Directors' Report:

Report for the year ended 31st December, 1932, shews a loss on Revenue Account of Rs. 7,967-9-9, add—balance brought forward Rs. 97,357-8-9, total Rs. 1,05,325-2-6. Less —adjustment Rs. 734-15-1, leaving a balance at debit of Rs. 1,04,590-3-5, to be carried forward to next account.

The outturn for the year was 4,182 maunds as compared with a revised estimate of 3,800 maunds and a crop in 1931 of 4,716 maunds.

The major portion of the crop was sold in Calcutta and realised an average price of As. 5-1 per lb. compared with an average of As. 5-7 per lb. in 1931.

The estimate for Season 1933 provides for a crop of 4,000 maunds to cost Rs. 1,28,054-11, subject to modification in the event of restriction of exports and crop being agreed to by the Industry.

Shareholders' Loan. As there was no profit on Revenue Account the Directors regret that no amount subscribed by the Shareholders can at present be refunded.

Begg Dunlop & Co., Ltd., Managing Agents.

KALITI TEA CO., LTD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	2,46,000	Block	...	2,53,723
Reserves	...	60,000	Crop A/c.	...	14,674
Debts	...	2,588	Outlay	...	4,440
			Outstandings	...	6,589
			Cash	...	18,507
			Profit & Loss	...	10,655
Total	...	3,08,588	Total	...	3,08,588

Extracts from Directors' Report:

Report for season 1932. The outturn has been 3,440 maunds as compared with an estimate of 3,000 maunds and an actual crop of 3,210 maunds in 1931.

The usual good standard of manufacture was well maintained throughout the season, but meeting an even more depressed market, the teas fetched an average price of only 4 annas 6 pies a lb. as compared with 5 annas 1 pie a lb. obtained for the previous year's crop.

Climatic conditions were on the whole favourable to growth, and to this, and the effect of artificial manuring is to be attributed the increase in crop.

The area under cultivation is 402 acres.

The receipts amounted to Rs. 78,351-5-2 and the expenditure to Rs. 79,526-5-1, showing a balance at debit of Revenue Account of Rs. 1,174-15-11. After adding to this:—Balance brought forward from last year Rs. 6,317-13-4, Prithimpassa Case costs Rs. 3,162-8-0, total Rs. 9,480-5-4, there is a balance of Rs. 10,655-5-3 at debit of Profit and Loss Account which is carried forward.

The Estimate for Season 1933 is for a crop of 2,795 maunds to cost Rs. 74,039.

Octavius Steel & Co., Ld., Managing Agents.

SINGARENI COLLIERIES CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.

Other Debts .	5,82,067	Cash & Invests. ...	12,17,030
Profit & Loss ...	3,62,027		
Total	...1,58,05,514	Total	.. 1,58,05,514

Extracts from Directors' Report:

Report—For the year ending 31st December, 1932.

During the year 3,060 Debentures of Rs. 100 each have been repaid.

After providing for the payment of Debenture Interest and placing Rs. 3,00,000 to reserve for Depreciation, the net profits amount to Rs. 3,02,027-5. With Rs. 59,999-10-9 brought forward from the previous account this leaves an available balance of Rs. 3,62,026-15-9, out of which the Directors recommend the payment of a Dividend at the rate of 5 per cent. for the year.

This will absorb Rs. 3,16,072-8, leaving a balance of Rs. 45,954-7-9 to be carried forward to the next account.

No improvement can be reported in the Coal Trade. Prices of coal still remain very low.

The Tandur Field is opening up well and this field is being equipped with electric power and other plant.

The Directors have decided that in future no half-yearly Reports will be issued.—Sir Gordon Fraser, Nawab Salar Jung Bahadur, Sir Akbar Hydari, Nawab Hyder Nawaz Jung Bahadur, L. C. Croslegh, Sir Fazulbhoy Currimbhoy, F. Birley, Khan Bahadur Ahmed Alladin, Directors. Deccan, 17th March, 1933.

Extracts from Directors' Report:

Report—For the half-year ended 28th February, 1923.

After providing Rs. 2,800 for Depreciation there is a balance of Rs. 11,922-3-4 at the credit of Profit and Loss Account from which they recommend:—Dividend of 4 annas per share Rs. 8,750, carry forward Rs. 3,172-3-4.

Raisings were lower and despatches higher than those of the preceding half-year.

Maharajah Sris Chandra Nandy being absent from Calcutta has not signed the Accounts.—J. H. S. Richardson, Onkar Mull Jatia, Directors. Calcutta, 4th April, 1933.

BALLY JUTE CO., LD.

Extracts from Directors' Report:

Report—For the year ending 31st December, 1932.

The operations during the year show a profit of Rs. 2,27,586-15-8 of which a sum of Rs. 1,20,000 is allocated to depreciation on Buildings, Machinery, etc., and the balance of Rs. 1,07,586-15-8 is appropriated to reduce the debit balance in the Profit and Loss Account.

With regard to the 7½ per cent. First Mortgage Debenture Loan of Rs. 18 lakhs issued during the year, the amount subscribed to the date of this report is Rs. 5,90,500.

The stocks and the cash balance at Bangalore as at 31st December, 1932, were verified by Messrs. K. S. Aiyar & Co., the Company's Auditors, and found correct.

The Mill property and stocks are insured for the sum of Rs. 48,28,700 and the Profits and Standing Charges for Rs. 6,00,000 for 24 months' benefit, that is Rs. 3,00,000 annually.—Lalubhai Samaldas, Chairman. Bombay, 31st March, 1933.

Total .	3,66,108	Total ...	3,66,108

Extracts from Directors' Report:

Report—For Season 1932.

Crop.—The outturn has been 2,727 maunds as compared with an estimate of 2,800 maunds and an actual crop of 2,518 maunds in 1931.

Quality was rather below last year's standard, and on a still further depressed market an average price of 3 annas 10 pies a lb. only was obtained for the teas as compared with 4 annas 8 pies a lb. realized for the previous season's crop.

Area.—An extension of 25 acres was put out during the year, and the total area under cultivation now stands at 485 acres.

Inspection.—The Managing Agents' representative visited the garden in August, 1932, and February of this year, and his reports were satisfactory.

Accounts.—The receipts amounted to Rs. 53,671-13-2 and the expenditure to Rs. 69,791-1-6, showing a balance at debit of Revenue Account of Rs. 16,119-4-4. Adding to this:—Balance brought forward from 1931 Account Rs. 44,701-1-8, Subscriptions to Octavius Steel & Co., Ld., Provident Institution Rs. 351, total Rs. 45,052-1-8; there is a balance at debit of Profit and Loss Account of Rs. 61,171-6 which is carried forward.

The Estimates for Season 1933 are for a Crop of 2,260* maunds to cost Rs. 61,226.

*Restricted in accordance with the "Regulation of Exports" Scheme.—S. S. Hodson, E. H. Sayres, T. H. L. Brown, Directors. Octovius Steel & Co., Ld., Managing Agents. Calcutta, 13th April, 1933.

SWADESHI MILLS CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	20,00,000	Block ...	95,38,482
Reserves ...	99,30,369	Stores & Spares ...	2,63,637
Debts ...	53,09,079	Stock-in-Trade ...	33,75,808
		Outstandings ...	12,62,556
		Cash & Invests. ...	24,68,487
		Profit & Loss ...	2,80,478
Total ...	1,72,39,448	Total ...	1,72,39,448

Extracts from Directors' Report:

Report—For the year ending 31st December, 1932.

They regret to observe that owing to the strike which, as mentioned in the last report, extended up to about the end of the first quarter and the consequent disorganization thereafter, and owing to the abnormal trade depression which continued throughout the year, the working of the Mills has resulted in a loss of Rs. 1,34,919-7-8. On adding thereto the debit balance of last year Rs. 1,45,558-8-6 the total debit to be carried forward to the account of the next year comes to Rs. 2,80,478-0-2.

In this year also the Company's Agents, Messrs. Tata Sons, Limited, have foregone their commission of Rs. 50,000 to which they were entitled.

The Directors very much regret to report the lamented death, which took place at Kissingen (Germany) on 3rd June, 1932, of their worthy Chairman, Sir Dorabji Jamsetji Tata, who had served on the Board since 1889 and was Chairman thereof since 1904, and who in these capacities and likewise as head of the firm of the Managing Agents, Messrs. Tata Sons, Limited, had rendered inestimable services to the Company. In his death the Company has suffered a very great loss.

For the half-year ended 30th June, 1932, no *ad-interim* dividend could be declared, and the final dividend can only be paid, as in last year, from the Equalisation of Dividend Fund. The Directors recommend the payment of a dividend of Rs. 6 per share, and the transfer to Dividend Account of Rs. 1,20,000 from the said Fund for this purpose.

During the year under report the Directors have sanctioned an expenditure of about Rs. 3,60,000 for the renewal of the Mixing Room and Blow Room Machinery, and of about Rs. 40,000 for the purchase of 100 broad looms to replace old narrow looms. They have also sanctioned an expenditure of about Rs. 4,000 for humidification.

During the year a contribution of Rs. 100 was made to the Goculdas Tejpal Hospital Nursing Association Fund.

The Company's Mills and Factories with their contents, and the stocks in Bombay and upcountry have been insured for Rs. 81,13,000.—N. B. Saklatvala, J. D. Ghandy, S. D. Saklatvala, The Hon'ble Sir Phiroze Sethna, Madhavji D. Thackersey, H. P. Mody, Jehangir R. D. Tata, Directors. Tata Sons, Ltd., Agents.

PHŒNIX MILLS, LD.

Synopsis of Balance Sheet:

Total ...	71,83,590	Total ...	71,83,590

Extracts from Directors' Report:

Report—For the year ended 31st December, 1932.

The Accounts show a net profit of Rs. 1,90,079-12-2, Add:—To this the sum brought over from last year's account Rs. 21,098-11-3, Refund of Income Tax received Rs. 5,755-3, making a total of Rs. 2,16,933-10-5. Less:—Amount of Income Tax paid during the year Rs. 6,770-13-4, there remains a balance of Rs. 2,10,162-13-1.

Your Directors propose to withdraw from the Reserve Fund a sum of Rs. 14,331-1-7, thus reducing the amount to the credit of that account to Rs. 35,70,000.

After doing so, the amount available for disposal is Rs. 2,24,493-14-8 which your Directors recommend may be dealt with as under:—Dividend at the rate of Rs. 10 per share, free of Income Tax, for the year Rs. 80,000, Depreciation:—On buildings Rs. 30,000, on Machinery Rs. 90,000, on Electric Light Installation Rs. 2,000, amount carried forward to next year's account to meet taxes on Income, etc. Rs. 22,493-14-8, total Rs. 2,24,493-14-8.

Your Directors hope that having regard to the deplorable state of the local textile industry you will consider the above result satisfactory.

The Mill Buildings with Machinery and Stocks of cotton, yarn, cloth, stores, etc., are insured against fire to the extent of Rs. 72,81,600 and against Riot and Civil Commotion Risks to the extent of Rs. 63,06,600.—Jamsetjee Ardaseer Wadia, F. E. Dinshaw, J. E. Ezra, Ramniwas Ramnarain, Paliram Muthradas, Alwyn Ezra, Directors. Bombay, 17th March, 1933.

NUNDYDROOG MINES.

According to the Report 163,095 tons of ore were treated during 1932, producing 84,942 oz. of fine gold, and 67,447 tons of accumulated tailings were re-treated, yielding 4,000 oz.: a further 654 oz. were obtained from auriferous slags, making a total of 89,605 oz. of fine gold, compared with 79,836 oz. for 1931. The average assay value of the ore milled was 10 cwts. 15 grains per ton, of which 98 per cent. was extracted in the treatment plant. The value of the bullion returned, including a small balance brought forward from 1931, was £522,379. The average price realized for the gold was £5-16-4½ per oz. (against £4-14-6 per oz.). In accordance with the terms of the agreement for acquisition of the Balaghat property 13,243 tons of ore from the Balaghat mine were treated and yielded 14,956 oz. of fine gold, the bullion realizing £89,384. The total sales of bullion therefore, amounted to £611,763. The working profit for the year, after deducting the Balaghat Company's share of the profit derived from mining and treating the Balaghat ore reserves, was £252,743 (against £116,020). The directors have written off £27,000 from buildings, machinery, etc., £4,000 from mining rights and property and £10,000 from the cost of the Balaghat property, etc., and have transferred £15,000 to reserve and £4,000 to insurance and contingency fund. In view of the heavy liability to income-tax on the year's profits, not yet assessed, £20,000 has been reserved and added to income-tax account. The directors now propose to pay a final dividend of 40 per cent., making 60 per cent. for the year (against 27½ per cent.) and to carry £9,559 forward. The balance of liquid assets at 31st December was £187,301. The cost per ton, excluding development, amounted to £1-4-1, a decrease of 6s. 2d. Development costs were 6s. 9d. per ton, an increase of 3d. Exploratory and development work in the mine totalled 12,648 ft. The ore reserves at 31st December last were estimated at 467,499 tons of an average assay value of 14.97 dwts., an increase of 147,843 tons on the previous year. This was largely due to the results of the development work in Oriental Section and also to a revision of the stoping width in certain parts of the mine. In addition to the above, there is a tonnage of probable ore of low grade which is estimated at 164,945 tons. The tonnage milled, at 163,095 tons, showed an increase of 40,378 tons, due in part to the inclusion of low grade ore rendered profitable by the high price of gold. For the year 1933 it is anticipated that the total tonnage milled will show a further increase.

NEW LOAN SUPPLEMENT

Vol. XI. No. 17. CALCUTTA, TUESDAY, APRIL 25, 1933. Price As. 4.

PENULTIMATE PHASE OF CONVERSION.

3½ PERCENT TYPE OF LOAN AT LONG LAST

PROGRESSIVE STAGES OF CONVERSION

TYPE, YIELD AND TIME APTLY CHOSEN

In earlier months, particularly after the announcement of the British Chancellor's plans for the conversion of the 5 per cent. 1929-47 war loan, *Indian Finance* had been grousing, again and again, at the lack of a like courage, imagination, and adroitness in the new loan operations of the financial authorities in India. The occasion furnished by to-day's issue of a Rupee Loan enables us to affirm that our grouses are a thing of the past, and to testify that the conversion programme, as conceived and as executed by Sir George Schuster and his lieutenants, through the successive stages, has shown that the authorities here are, likewise, capable of formulating and carrying out an adroit and scientific credit policy.

The conversion plan is being put through in instalments; and a study of the prospectus of to-day's loan convinces us that there will be, in due time, yet another instalment or two. That is to say, we are yet in the midst of the conversion process; and looking behind at the achievements so far, we gladly pay tribute to the splendid manner in which the larger part of the work has been done; and looking ahead to what is yet to be accomplished, we are confident that the entire conversion programme would reach its completion in a triumphant climax. Less then ten months ago, the type of loan that had to be put on the market was a 5½ per cent. issue at a discount of 2 per cent. The present loan is a 3½ per cent. issue at a discount of 4 per cent. The 5½ per cent. 1938-40 loan issued in June, 1932 was a short-term proposition. The present issue of 3½ per cent. 1947-50 loan is much more than a short-term loan—it is, in fact, even more than a medium-term loan—if we may say so, it is a half-way house between a medium-term loan and a long-term loan. From a strictly short-term loan on a 5½ per cent. type in June, 1932, to a comparatively long-term issue on 3½ per cent. type in April, 1933, is, indeed, a notable achievement. If the present loan is a success—and we cannot imagine how it can be otherwise—the effect of such a successful accomplishment would be so favourable on the giltedge market that it should be within the realm of practical politics for the Government to issue the next instalment of the conversion programme in terms of a 3½ per cent. issue at or just under par. At the very outset, we should like to say, with all emphasis, that once the present loan issue has been brought to a successful fruition, the loan problems, be that of cash or of conversion, should be of the lightest character for the next three years—so light, indeed, that this in itself should form a bullish factor of most outstanding significance.

Inclusive of the loan issued in June, 1932 and of the present loan, the Government have so far come on the market on five different occasions. In June 1932, it was a 5½ per cent. 1938-40 loan at Rs. 98; in August, it was a 5 per cent. 1940-43 at Rs. 98; in January, 1933, it was a 4 per cent. 1943 at Rs. 98; in February, it was a 4 per cent. 1960-70 on a basis which worked out to Rs. 93; on the present occasion, it is a 3½ per cent. 1947-50 at Rs. 96. The position, thus stated, should make most happy reading.

A feature, on which we have cause to feel particularly gratified, is that in the case of the loans made in January and February of this year, the yields on the loans were decidedly lower than those forthcoming on the existing securities on the eve of the loans, with the result that the immediate effect of the announcement of the loan was to cause an upward rise in the prices of securities so that they could adjust themselves to the new borrowing rate. As our readers know only too well, we have attached the greatest importance to this principle, which, we believe, is of utmost value for the ensuring of a favourable response for a loan. We are happy that in regard to the present loan, the same principle has been strictly kept in view by the authorities. On April 24, 3½ per cent. India Rupee Paper was quoting Rs. 88; at this price, the yield works out to 3.98 per cent. 4 per cent. 1960-70 was quoting, on April 24, Rs. 99, the yield working out to 4.05 per cent. Assuming redemption on the later date—in the case of a loan on as low an interest basis as a 3½ per cent issue, it is proper to assume redemption on the longer date—the yield on 3½ per cent. 1947-50 loan at Rs. 96 works out to 3.78 per cent. In other words, the borrowing rate in the present instance is fully .2 per cent. lower than the yield available on such popular securities as 3½ per cent. Paper and 4 per cent. 1960-70. It is obvious that there should be an appreciation in these and other securities in order that the yields available are also reduced to roundabout 3¾ per cent. To yield 3¾ per cent., 3½ per cent. Paper should rise by two to three points more; 4 per cent. 1960-70 should also show a similar advance.

From the point of view of the psychological effect of a new loan, what will happen in the next few days is that such leading scrips as 3½ per cent. Rupee Paper and 4 per cent. 1960-70 should show a satisfactory appreciation in value; these should engender a considerable measure of optimism and buoyancy in giltedge market; in the brither sentiment thus created, the New Loan is sure to evoke a warm response.

Moreover, the cash loan is limited to Rs. 15 crores; and the list is to be closed as soon as this amount is reached. In any case, the list is not to be kept open for more than two days. This may be taken as showing the Government's confidence in their ability to secure the full quota. A gesture of this kind should impress the market psychology most favourably. The conversion loan is also limited to Rs. 15 crores. A limit of this nature is calculated to induce holders of the relevant securities to hurry up and present their scrips for conversion, lest they should be left out. We are convinced that so far as the "strategic" implications of the New Loan are concerned, the plan of the present loan and the yield that it is to give are just what they should be.

We should, however, draw the attention of the authorities to an important feature in regard to the reports and forecasts that were current in the market prior to the loan. The market was anticipating a 3½ per cent. fifteen-year loan at Rs. 97 or Rs. 98. When it comes to know that the issue price is to be Rs. 96, this might have a damping effect. On the first shock of the news, there may be, actually, a setback in giltedge prices. But we feel sure that when a careful study of the relevant figures is made, everyone will be convinced that an issue price of Rs. 97 would have been somewhat too high in respect of a 3½ per cent. loan maturing after 17 years; and that the yield of 3.80 per cent. on the New Loan as compared with 4 per cent. on scrips like 3½ per cent. Paper is just the proper level. If there is a proper appreciation of the position in this behalf, there should be no setback.

However, sentiment plays an important part in giltedge. It may be, therefore, that prices do react by virtue of the issue price being one per cent. lower than market expectations. Should there be such a reaction, we would strongly urge upon the Government to lend full and powerful support to the market by suitable and adequate purchase of securities. The financial year has just begun. In the course of this year, the Government will have available to them Rs. 6.88 crores in the Debt Redemption Fund. We have always insisted that the Debt Redemption Fund should be utilised for an enlightened open-market purchase policy, with a view to support the securities market. We know for certain that the Government themselves have accepted this principle in the last quarter. We maintain that if there is an immediate setback in the market, it is the fittest occasion for the Government to make open-market purchases in a way that will enable the market to realise the exact nature of the New Loan.

There should be no delay or hesitation in this respect. The technical position of the market is that operators are heavily over-bought. The securities taken over to the next settlement on the Bombay stock exchange would amount to no less than Rs. 1½ crores. If in such a situation, a setback is allowed to develop and deepen, it may cause nervousness amongst those who have an over-bought position. This would mean that many of the present bulls would get nervous and, by their hurried sales, accentuate the setback. If the Government apply the remedy in time, the rot would be arrested; and on the market appreciating the relevant factors in their true perspective, the upward movement in prices will be resumed. If the Government do not apply the remedy in time, they would learn the painful lesson suggested by the good old saying that "a stitch in time saves nine". If the Government buy Rs. 25 lakhs worth of securities at the psychological moment, it would mean that the market takes a decided turn for the better. If

BUY

CENTRAL BANK'S 3 YEARS CASH CERTIFICATES

FREE LIFE INSURANCE POLICIES

Every Rs. 88/8 deposited will bring you Rs. 100/- after three years which works out at the rate of 4⅛ per cent Compound Interest.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 3 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3¾ per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 4 per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.

For further particulars please apply at any one of our Branches.

CENTRAL BANK OF INDIA, LIMITED.

the Government do not intervene in the way suggested, they might well have to buy securities for ten times Rs. 25 lakhs, in order to get the giltedge situation again under their control.

On former occasions, we used to tender advice to the Government in the spirit of hoping against hope that something might be done. On the present occasion, however, we place our views in the full confidence that just as the authorities were willing to give up their earlier prejudices and take whatever suitable action was necessary to ensure the success of the last two loans, they would, in the present instance also, show an equal readiness to shape their actions in consonance with market sentiment as well as the technical position of the market. As we have stated at the commencement, there has been a considerable improvement in the technique of Government's credit policy and operations so far as the formulation and execution of the conversion plan is concerned. The essentials of the plan have been as follows:

1. The Treasury desires to pay all those loans for which option for redemption rests with the Government. At the same time, the loans maturing during the year are also provided for by conversion or otherwise.

2. By the offer of a reasonably attractive proposition for holders of securities maturing over the following two years or so, the Government seek to lighten the load and embarrassment in the immediate and near future.

3. The conversion process is arranged in such a way that, step by step, and at each step, the Government have raised the level of securities and given the investors concerned an opportunity to convert their holdings in a manner which has left them a good margin of profit.

4. Through this process, the appetite of the holders of the securities eligible for conversion has been whetted. At the same time, the Treasury has secured the benefit of the progressive decrease in the borrowing rate.

As a result of the plan being carried out in the above manner, a steady and sustained rise has taken place in giltedge securities; and each new issue had risen so appreciably by the time of the next issue, that a most favourable atmosphere was thus being created for the loan programmes.

In this process, the position on the eve of the present loan stood thus: Since the inauguration of the conversion plan, loans converted into new issues amount to Rs. 57.93 crores. In the second place, the balance of 5 per cent. 1929-47, 5 per cent. 1933 and 6 per cent. 1933-36, that remains to be paid off in the course of this fiscal year, stands at Rs. 17.48 crores. Notice has also been given that repayment will be made of 4 per cent. 1931-36 loan. The amount involved in the latter is Rs. 9.90 crores. In respect of all these four loans, the Government will, therefore, have to provide Rs. 37.28 crores. The loans that can be tackled are those that mature in 1934-35 and 1935-36, as provision has been made or is being made for the loans that are to be paid off in the current financial year. The loans that will mature in the next two years are as under:

	Crores. Rs.
4½ per cent. 1934 ...	25.98
5 per cent. 1935 ...	12.83
6½ per cent. 1935 ...	16.95
Total ...	55.76

Assuming that the present conversion issue will be a success, the total of bonus that have been converted into issues redeemable at a much later date, would amount to Rs. 72.93 crores.

In this position, the Government have announced a cash and conversion loan whose main terms are given in the advertisement appearing elsewhere.

Let us now examine how a loan of this description fits in with the proposals contained in the ways and means budget announced by the Finance Member on February 28. Assuming that Rs. 22 crores of 1929-47, 1933 and 1933-36 bonds will be converted into 4 per cent. 1960-70 loan, the New Rupee Loan programme was fixed at Rs. 12 crores. It must be added that this was the estimate furnished in the ways and means summary. But in the estimated borrowing programme, against an assumption of conversion reaching Rs. 30 crores, the new loan to be raised in India was placed at Rs. 4 crores. Actually, however, the results of the February conversion were in the neighbourhood of Rs. 34 crores. This means that in the light of the proposals made in February-end, no new loan will have to be raised. Moreover, it is estimated that Treasury Bills, which were to stand at Rs. 28 crores on March 31, 1933, would decline to Rs. 20 crores by March 31, 1934. In the condition, present and prospective, of the Indian money market, there is no case whatsoever for the reduction of the floating debt to a figure like Rs. 30 crores. In fact, the needs of the money market would require that they should be supplied with Treasuries at least up to Rs. 28 crores or thereabouts. We should, therefore, think that in the light of the proposals that were kept in view at the time of the drafting of the budget, no cash loan is or could be necessary.

A new factor, however, has to be mentioned as affecting the original proposals. This factor consists in the notice that has been given to the holders of 4 per cent. 1931-36 that they will be paid off in the course of this fiscal year. This means that as distinct from the budget estimates, Rs. 10 crores will have to be found for the 4 per cent. 1931-36 loan. As a matter of fact, the cash loan is now to be for Rs. 15 crores. We should, therefore, think that the extra Rs. 5 crores is for the general strengthening of the ways and means position of the Treasury.

However, for purposes of calculation, we should assume that as against Rs. 55¾ crores outstanding in respect of 4½ per cent. 1934, 5 per cent. 1935 and 6½ per cent. 1935 bonds, Rs. 20 crores will be provided for by the present loan issue—Rs. 15 crores by the conversion loan and Rs. 5 crores by the excess sum in the cash loan. It follows that the conversion programme to be tackled hereafter in respect of the loans maturing in 1934-35 and 1935-36 would be reduced to Rs. 35¾ crores.

We may again repeat that there will be no need for a cash loan for another two years. There can be no immediate expansion in the capital programme. Railways are confronted with a new problem in the shape of rail versus motor competition. Till this is solved, the capital outlay on Railways could not exceed the excess of the payments into Railway Depreciation Fund over the withdrawals.

That is, there would be no cash loan till end of 1935-36. The conversion loans will be of the slightest description. Viewed thus, the future of giltedge in India is very bright, indeed. No developments outside of India need, or would, upset calculations based on the intrinsic strength and stability of the Government's ways and means position, now and hereafter upto 1935-36.

GOVERNMENT OF INDIA.

FINANCE DEPARTMENT.

NOTIFICATION.

No. F. 3 (2) F-33.

Dated Simla, the 25th April, 1933.

Subscriptions for an issue of a 3½ per cent. Loan, 1947-50, will be received from the 28th April, 1933. The loan will consist of two sections :—

A. Cash, and
B. Conversion,

subscriptions to each section being limited to a total of Rs. 15 crores (nominal) approximately.

Subscriptions to section A may be in any of the following forms, *viz.*,

(*i*) Securities of the 4 per cent. Conversion Loan of 1916-17,
(*ii*) Cash,
(*iii*) Treasury bills maturing not later than the 10th May, 1933, and
(*iv*) Securities of the 5 per cent. War Loan, 1929-47, the 5 per cent. Bonds, 1933, and the 6 per cent. Bonds, 1933-36.

Subscriptions to section B may be in the form of securities of the loans mentioned below, *viz.*,

(*i*) the 4½ per cent. Bonds, 1934,
(*ii*) the 5 per cent. Bonds, 1935, and
(*iii*) the 6½ per cent. Treasury Bonds, 1935.

Section A of the loan will be closed to subscriptions without notice as soon as it appears that a total of Rs. 15 crores (nominal) approximately has been reached, and in any case not later than the 29th April, 1933. In the event of subscriptions exceeding the limit of Rs. 15 crores (nominal) mentioned above, partial allotment will be made. In making such allotment subscriptions in the form of the 4 per cent. Conversion Loan of 1916-17 will be accepted in full and preference will be given firstly to subscriptions in cash and secondly to subscriptions in the form of treasury bills over subscriptions in the form of the 5 per cent. War Loan, 1929-47, the 5 per cent. Bonds, 1933, and the 6 per cent. Bonds, 1933-36.

Section B of the loan will be closed to subscriptions without notice as soon as it appears that a total of Rs. 15 crores (nominal) approximately has been reached, and in any case not later than the 13th May, 1933.

3½ per cent. Loan, 1947-50, issued at Rs. 96 per cent and redeemable at par not earlier than 1947 and not later than 1950.

2. DATE OF REPAYMENT.—If not previously repaid, the loan will be repaid at par on the 15th November, 1950, but the Government of India reserve to themselves the right to repay the loan or any part of it, at par, on or after the 15th November, 1947, on giving three calendar months' notice in the *Gazette of India*.

3. ISSUE PRICE.—The issue price will be Rs. 96 for every Rs. 100 of the loan applied for.

4. INTEREST.—The loan will bear interest at the rate of 3½ per cent. per annum from the 15th May, 1933. Interest will be payable half-yearly on the 15th November and the 15th May, and will be liable to income-tax.

MISCELLANEOUS TERMS FOR CASH SECTION.

5. Treasury bills will be accepted at their face value. Securities of the 4 per cent. Conversion Loan of 1916-17 and of the 5 per cent. War Loan, 1929-47 will be accepted at par and securities of the 5 per cent. Bonds, 1933 and of the 6 per cent. Bonds, 1933-36, at Rs. 100-12 as.

Interest at the rate of 3½ per cent. per annum will be paid on the nominal value of the new loan allotted from the date of application up to the 14th May, 1933.

Interest at existing rates will be paid on securities accepted as subscription up to the date preceding the date of application.

If the value of the treasury bills or securities accepted as subscription is not an exact multiple of the issue price per cent. of the loan allotted, the applicant will receive in cash, at the time of issue of the new securities, the amount by which the value of the treasury bills or securities accepted exceeds the nearest lower multiple of such issue price.

CONVERSION TERMS.

4½ per cent. Bonds, 1934.

6. For every Rs. 100 (nominal value) of the 4½ per cent. Bonds, 1934, tendered for conversion, applicants will receive Rs. 100 (nominal value) of the 3½ per cent. Loan, 1947-50, bearing interest from the 15th May, 1933, and the following payments in cash at the time of issue of the new securities :—

(*a*) Rs. 6-2 as. as cash bonus on conversion ; and
(*b*) interest accrued on the 4½ per cent. Bonds, 1934, tendered for conversion, up to the 14th May, 1933, at the rate of 4½ per cent. per annum.

5 per cent. Bonds, 1935.

7. For every Rs. 100 (nominal value) of the 5 per cent. Bonds, 1935, tendered for conversion, applicants will receive Rs. 100 (nominal value) of the 3½ per cent. Loan, 1947-50, bearing interest from the 15th May, 1933, and the following payments in cash at the time of issue of the new securities :—

(*a*) Rs. 8 as cash bonus on conversion ; and
(*b*) interest accrued on the 5 per cent. Bonds, 1935, tendered for conversion, up to the 14th May, 1933, at the rate of 5 per cent. per annum.

6½ per cent. Treasury Bonds, 1935.

8. For every Rs. 100 (nominal value) of the 6½ per cent. Treasury Bonds, 1935, tendered for conversion, applicants will receive Rs. 100 (nominal value) of the 3½ per cent. Loan, 1947-50, bearing interest from the 15th May, 1933, and the following payments in cash at the time of issue of the new securities :—

(*a*) Rs. 11-8 as. as cash bonus on conversion ; and
(*b*) interest accrued on the 6½ per cent. Treasury Bonds, 1935, tendered for conversion, up to the 14th May, 1933, at the rate of 6½ per cent. per annum.

By order of the Governor General in Council,
J. B. TAYLOR,
Offg. Secretary to the Government of India.

MID-WEEK SUPPLEMENT

Vol. XI. No. 18. CALCUTTA, THURSDAY, APRIL 27, 1933. Price As. 8.

ON THE EVE OF THE NEW LOAN

ACHIEVEMENT OF BRITAIN AND INDIA UNIQUE

FURTHER IMPROVEMENT IN GILTEDGE ASSURED

LISTS FOR CASH AND CONVERSION WILL CLOSE SPEEDILY

We believe that we are on the eve of one of the most memorable eras in the Indian giltedge market.

The list for 3½ per cent. 1947-50 loan is to open to-morrow. It will, we are assured, mark a phase of giltedge, which is bound to prove increasingly and lastingly beneficial to every interest in the country.

We hail this loan because we are happy that the pre-War type of 3½ per cent. loan has been restored. Such a development is a feat which other than India, only Britain has achieved.

More. We hail this loan because we believe that this is not a transitory phase or an isolated event; that, so far as we can see ahead, conditions even more satisfactory will be created, progressively, in this and the next two fiscal years; and that long-dated loans should, in due course, adjust themselves to prices which will result in an yield of 3½ per cent. and short-dated loans to an yield of 3 per cent.

The purpose of to-day's Supplement is to aver our optimistic views, to explain the justification for such views, and to communicate, to the Indian money market, a like fervour and degree of optimism.

We have taken upon ourselves this task because we have heard doubts expressed, even in usually well-informed quarters, about the permanence of the present phase in the giltedge situation in India.

"The present position is entirely artificial"—say some. "When trade revives and there is demand for money, giltedge should suffer a heavy setback"— say a few others. "In any case, how can rupee giltedge securities be maintained at current levels unless the sterling stocks of the Government of India are also at corresponding levels"?—ask others.

An esteemed correspondent, whose judgment and opinion in this matter has ever carried with us great respect and absolute authority writes as under:

> "I am not sure that it should be Government's policy to force securities to unnatural levels for India; and if our quotations go beyond sterling values, they may prove a menace to exchange. Furthermore, the present conditions are artificial (because of gold and the utter lack of trade) and if securities, by weight of money, are forced to such firmness that 3½ per cent. money is obtainable for long-term issues, there will, when trade improves, be such a reaction that prices will slump and the frozen conditions (as regards government securities) will obtain such as existed two years ago, again disgusting banks and such holders who might wish to liquidate. I am not an advocate for dirt cheap money for India and I cannot see that this policy has stimulated trade or relieved unemployment in Britain or America".

The fact is that everyone is haunted by the nightmare of ever-declining values in the four or five years following the 1926 boom. And, it is argued, a similar landslide is inevitable after the present boom, too.

We are convinced—and we say it with all emphasis—that such pessimism is unwarranted in the general trade and financial conditions prevalent to-day, and unjustified in the circumstances, now and hereafter, pertaining to the ways and means position of the Indian Treasury and pertaining to its commitments over these three years.

The magnitude of the conversion operations put through so far explains the rapid decline in the borrowing rate in consonance with the progressive solution, in stages, of the loan problems. The modest size of the operations yet to be put through justifies the hope that this progressive decline will be maintained.

What is the achievement? Let us have a full measure of all that has been done:

1. In September, 1931, a 6½ per cent. short-dated (very short-dated in fact) loan was the only course open to the authorities. Even so, the list had to be kept open for an indefinite period; special facilities had to be offered; and despite all this, the realisations were only 16.95 crores. So great a change has come over the giltedge situation that the 4 per cent. ten-year loan for Rs. 15 crores, issued last January, was over-subscribed within a few minutes.

Treasury Bills receiving allotment and all cash applications being curtly rejected. The cash section of the 3½ per cent. 1947-50 loan, to be issued this week and yielding only 3.80 per cent., promises to be an even greater and more sensational success as regards over-subscription.

2. Inclusive of the loan for which the list will open tomorrow, the cash and conversion loans issued in the past twelve months amounts to Rs. 123.22 crores and may be tabulated as under :

	(In crores of Rs.) Cash	Conversion
5½ per cent. 1938-48 ...	15.51	3.63
5 per cent. 1940-43 ...	4.81	20.37
4 per cent. 1943 ...	14.97	...
4 per cent. 1960-70 ...	...	33.93
3½ per cent. 1947-50 ...	15.00	15.00
	50.29	72.93
Total of Cash and Conversion loans ...		123.22

3. Inclusive of all the loans to be redeemed in the following months of this financial year (for which notice has already been given), the total of old loans repaid or to be repaid is as under :

	(In crores of Rs.)
6 per cent. 1932 Bonds ...	14.63
6 per cent. 1933-36 ...	29.71
5 per cent. 1933	21.46
5 per cent. 1929-47 ...	20.46
4 per cent. 1931-36 ...	9.90
	95.86

In addition to the above, Rs. 15 crores out of the Rs. 55¾ crores of 4½ per cent. 1934, 5 per cent. 1935 and 6½ per cent. 1935 bonds would have been converted.

4. In other words, the total of loans converted into debt redeemable at a much later date would aggregate Rs. 110.86 crores. As against this, the total of cash and conversion loans issued so far come to Rs. 123.22 crores. The excess of Rs. 12 crores accounts, in part, for the reduction of Treasury Bills outstandings with the public, which, at the end of this financial year, are expected to show a shrinkage of Rs. 16 crores.

5. The floating debt subscribed for by the public would have been brought to the modest size of Rs. 20 crores or thereabouts.

6. Of the loans maturing up to the end of 1935-36, only Rs. 40¾ crores has to be tackled.

7. The general position of the Treasury, both in India and in Britain, has been strengthened to such an extent that there would be no need for the issue of any cash loan for three years—the more so as the maximum of capital expenditure that can be revived will be covered by the accruals in the various funds at the disposal of the Government.

If such is the result of the measures carried out hitherto, and if the effect of such measures has been to cause a decline in the borrowing rate of the Treasury from over 6 per cent. to under 4 per cent. we have now to consider what are the problems in connection with loans, that have to be tackled in the coming years and what the effect of the operations connected therewith would be on giltedge prices. Confining our attention to the end of the fiscal year 1935-36, the position is as under :

1. As already stated, there should be no need at all for any cash loan.

2. The balance of maturing loans to be dealt with is only Rs. 40¾ crores. Considering that tomorrow's loan issue is assured of instantaneous success, we do not see any reason why the problem of the conversion of this balance should not be taken on hand immediately. We are, as a matter of fact, persuaded that by the end of May or the middle of June, the entire lot of the 4½ per cent. 1935, 5 per cent. 1935 and 6½ per cent. 1935 bonds could be succesfully and effectively dealt with, thus triumphantly completing the conversion programme begun last August. In other words, there should not be, in our view, any further problem left over, beyond June, even in regard to conversion.

3. If there is, on the one hand, to be no cash loan at all and practically no conversion loan for this and the next two financial years, there is, on the other hand, the accumulating investment power of those who would not look at any other form of security for their savings than giltedge. Insurance companies, trust companies, trusts and many private investors have, in large part, a predilection for giltedge which is deep-seated and unshakable. Moreover, the available volume of Treasury Bills will be reduced to so low a figure as Rs. 20 crores. To that extent, even banks and money market institutions will have to divert to giltedge securities a good portion of the amount held till now in Treasury Bills. All circumstances taken into consideration, we estimate that the minimum amount of funds that are bound to flow into giltedge securities is in the neighbourhood of Rs. 20 crores per year. In three years, this will amount to Rs. 60 crores.

4. In the absence of any new loan, cash or

BUY

CENTRAL BANK'S 3 YEARS CASH CERTIFICATES

FREE LIFE INSURANCE POLICIES

Every Rs. 88/8 deposited will bring you Rs. 100/- after three years which works out at the rate of 4⅛ per cent Compound Interest.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 3 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3⅜ per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 4 per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.

For further particulars please apply at any one of our Branches.

CENTRAL BANK OF INDIA, LIMITED,

otherwise, all this Rs. 60 crores will, perforce, have to find an outlet among existing giltedge securities. Purchases from the open market of securities for such large amounts would prove to be a most powerful factor not only in the maintenance, but in the acceleration, of the present upward trend in giltedge prices.

In other words, given a freedom from abnormal developments, giltedge securities should see higher and higher price levels in the next three years. This movement will receive a most favourable start from the results of the loan to-morrow.

We have made detailed enquiries from those in the know both in Calcutta and in Bombay. The general opinion is that the list for the cash loan will close within half an hour; and that the list for the conversion loan will close probably on the very first day and certainly on the second day. The New Loan is already quoting at a premium of 10 annas, with good buyers. We understand that business up to anything like Rs. 75 lakhs has been put through in the New Loan at a premium of 8 annas and over. This factor, in itself, is sufficient guarantee that there will be quite a large and eager crowd waiting in front of the Bank long before the opening hour.

The Finance Member has shown good judgment in regard to the order of perference amongst applicants to the cash loan. The limit of the cash loan is Rs. 15 crores. "In the event of subscriptions exceeding the limit of Rs. 15 crores (nominal) mentioned above, partial allotment will be made. In making such allotment, subscriptions in the form of 4 per cent. conversion loan of 1916-17 will be accepted in full and preference will be given firstly to subscriptions in cash and secondly to subscriptions in the form of Treasury Bills over subscriptions in the form of 5 per cent. war loan 1929-47, 5 per cent. bonds 1933 and 6 per cent. bonds 1933-36".

The holders of the 4 per cent. conversion loan of 1916-17 are not likely to neglect the opportunity thus afforded to them. They will have an all too vivid recollection of the fact that the holders of the 5 per cent. 1929-47, 5 per cent. 1933 and 6 per cent. 1933-36 were given the option to convert into 4 per cent. 1960-70 on the basis of Rs. 93; and that the non-assenters stand to lose no less than 7 per cent., as 4 per cent. 1960-70 is to-day quoting Rs. 100 or slightly over. The holders of the 1931-36 loan are, therefore, likely to be prompt in regard to the tendering of their securities for conversion.

The total of this loan comes to Rs. 9.90 crores. It may be taken as certain that at least Rs. 7 crores to Rs. 8 crores will be tendered for conversion. The balance left will be, therefore, Rs. 8 crores to Rs. 7 crores. For this portion, cash applications will have first preference. The Imperial Bank alone may account for an application for anything like Rs. 5 crores. Market operators are sure to apply for considerable quantities. Banks also are sure to take a substantial interest. We would not be surprised if, at the very opening of the list, applicants are present with cash for twice or thrice the amount that will be available after the holders of 1931-36 have been satisfied.

In other words, we do not think there is any chance for holders of Treasury Bills. Much less is there any chance for the holders of the three scrips which were eligible for the last conversion and which come last as regards eligibility for the present loan.

Those who apply for cash may get allotment on the basis of 40 to 50 per cent.

To sum up, we believe that

(1) the list for the cash loan will be closed in half an hour;

(2) there will be tenders of 1931-36 loan to the extent of Rs. 7 crores to Rs. 8 crores;

and (3) cash applications will receive *pro rata* allotment on a basis which may be 50 per cent. or less.

When results on lines somewhat like these are made known to the market, it should result in the acceleration of the flow of applications for the conversion section. There is every likelihood of this section also being closed on the very first day.

If the cash loan is over-subscribed in half an hour, and if the conversion loan is over-subscribed in a day or two, it is easy to imagine what the effect of this would be on the New Loan. Just as the 4 per cent. 1943 shot up to a premium immediately after the closing of the list, the present 3½ per cent. loan also should advance to Rs. 98 or so in the very first week of May.

The emergence of such a substantial premium on the New Loan should act as a tonic on the other securities in the market. The era of advancing giltedge prices, which is ushered on a new basis of definite strength as from tomorrow, will thus start under the most auspicious circumstances caused by an inevitable spurt in the New Loan.

The balance of Rs. 40¾ crores that remains to be converted can be tackled in the enthusiasm thus evoked on the basis of 3½ per cent. 1947-50 loan at par.

This should be a fitting climax to a conversion programme, well conceived and well executed in all its stages.

In an earlier paragraph we stated that "given a freedom from abnormal developments, giltedge securities would see higher and higher price levels in the next three years". It now remains for us to examine whether we can reasonably hope for such a freedom from abnormal events.

The first abnormal event that can take place is an appreciation of rupee securities to a far higher level than corresponding sterling securities of the Indian Government. This is, however, a development which it is entirely in the power of the Government to set right. To the extent that, on the very strength of the intrinsic factors in the Indian giltedge situation, prices in India must be on the upward grade, no special operations need have to be taken by the Government for the support of the securities market. That is to say, the Debt Redemption Fund will not have to be utilised for the improvement of the prices of rupee securities. This means that the proceeds of this fund are available for purchase of sterling securities as and when any undue disparity begins to manifest itself between sterling stocks and rupee stocks. By judicious buying in the London market, India sterling stocks could be kept at a level in consonance with that of rupee securities.

Moreover, since the passing of the income tax legislation in the last spring session of the Assembly, sterling securities have become less attractive. This measure puts a real check in the way of the diversion of funds from rupee stocks to sterling securities. From the point of view of this factor, no apprehensions need be entertained as regards the adverse effect, on exchange, of rupee securities being at higher price levels than sterling securities.

The second development, which, it is believed, is likely to cause a setback in the giltedge market, is the revival of trade in India. If there is such a revival of trade, it should be possible for the Treasury to supply increasing quantities of currency to meet increasing demands. There is a considerable margin for expansion by revival of *adhoc* securities. In other ways, too, the technique of the operations of the currency department in India has tended to approximate more and more to the technique of a Central Bank. Automatic supply or withdrawal of supply of currency in tune with increasing or decreasing trade demand is now an operation which the currency authorities are quite competent to undertake. No stringency for money need be feared from expansion in trade so long as the currency authorities may be relied on to cause an immediate increase in the volume of currency available to trade.

A third development, of which due note should be taken in this connection, is international finance. If panicky conditions are created abroad, what will be their effect on the Indian giltedge market? Here, again, one can take a more hopeful view of future prospects. The conversations that are now taking place in Washington promise to lead to a speedy settlement of the conundrums in international finance. In any case, the day of sudden alarms is over.

Moreover, the Indian situation, from the point of view of Government finance, is intrinsically so strong and promises to be so unassailable for at least three years, that external events cannot have but very slight effect.

All considerations point to only one conclusion—that the future of giltedge in India is extremely bright.

By undertaking the conversion of the remaining Rs. 40¾ crores within a week or two of the closing of the list of the present 3½ per cent. loan, Sir George Schuster can have the satisfaction of proceeding on his London mission only after he has brought the entire conversion plan to a victorious end.

GOVERNMENT OF INDIA.

FINANCE DEPARTMENT.

NOTIFICATION.

No. F. 3 (2) F-33.

Dated Simla, the 25th April, 1933.

Subscriptions for an issue of a 3½ per cent. Loan, 1947-50, will be received from the 28th April, 1933. The loan will consist of two sections :—

A. Cash, and
B. Conversion,

subscriptions to each section being limited to a total of Rs. 15 crores (nominal) approximately.

Subscriptions to section A may be in any of the following forms, *viz.*,

(*i*) Securities of the 4 per cent. Conversion Loan of 1916-17,
(*ii*) Cash,
(*iii*) Treasury bills maturing not later than the 10th May, 1933, and
(*iv*) Securities of the 5 per cent. War Loan, 1929-47, the 5 per cent. Bonds, 1933, and the 6 per cent. Bonds, 1933-36.

Subscriptions to section B may be in the form of securities of the loans mentioned below, *viz.*,

(*i*) the 4½ per cent. Bonds, 1934,
(*ii*) the 5 per cent. Bonds, 1935, and
(*iii*) the 6½ per cent. Treasury Bonds, 1935.

Section A of the loan will be closed to subscriptions without notice as soon as it appears that a total of Rs. 15 crores (nominal) approximately has been reached, and in any case not later than the 29th April, 1933. In the event of subscriptions exceeding the limit of Rs. 15 crores (nominal) mentioned above, partial allotment will be made. In making such allotment subscriptions in the form of the 4 per cent. Conversion Loan of 1916-17 will be accepted in full and preference will be given firstly to subscriptions in cash and secondly to subscriptions in the form of treasury bills over subscriptions in the form of the 5 per cent. War Loan, 1929-47, the 5 per cent. Bonds, 1933, and the 6 per cent. Bonds, 1933-36.

Section B of the loan will be closed to subscriptions without notice as soon as it appears that a total of Rs. 15 crores (nominal) approximately has been reached, and in any case not later than the 13th May, 1933.

3½ per cent. Loan, 1947-50, issued at Rs. 96 per cent and redeemable at par not earlier than 1947 and not later than 1950.

2. DATE OF REPAYMENT.—If not previously repaid, the loan will be repaid at par on the 15th November, 1950, but the Government of India reserve to themselves the right to repay the loan or any part of it, at par, on or after the 15th November, 1947, on giving three calendar months' notice in the *Gazette of India*.

3. ISSUE PRICE.—The issue price will be Rs. 96 for every Rs. 100 of the loan applied for.

4. INTEREST.—The loan will bear interest at the rate of 3½ per cent. per annum from the 15th May, 1933. Interest will be payable half-yearly on the 15th November and the 15th May, and will be liable to income-tax.

MISCELLANEOUS TERMS FOR CASH SECTION.

5. Treasury bills will be accepted at their face value. Securities of the 4 per cent. Conversion Loan of 1916-17 and of the 5 per cent. War Loan, 1929-47 will be accepted at par and securities of the 5 per cent. Bonds, 1933 and of the 6 per cent. Bonds, 1933-36, at Rs. 100-12 as.

Interest at the rate of 3½ per cent. per annum will be paid on the nominal value of the new loan allotted from the date of application up to the 14th May, 1933.

Interest at existing rates will be paid on securities accepted as subscription up to the date preceding the date of application.

If the value of the treasury bills or securities accepted as subscription is not an exact multiple of the issue price per cent. of the loan allotted, the applicant will receive in cash, at the time of issue of the new securities, the amount by which the value of the treasury bills or securities accepted exceeds the nearest lower multiple of such issue price.

CONVERSION TERMS.

4½ per cent. Bonds, 1934.

6. For every Rs. 100 (nominal value) of the 4½ per cent. Bonds, 1934, tendered for conversion, applicants will receive Rs. 100 (nominal value) of the 3½ per cent. Loan, 1947-50, bearing interest from the 15th May, 1933, and the following payments in cash at the time of issue of the new securities :—

(*a*) Rs. 6-2 as. as cash bonus on conversion ; and
(*b*) interest accrued on the 4½ per cent. Bonds, 1934, tendered for conversion, up to the 14th May, 1933, at the rate of 4½ per cent. per annum.

5 per cent. Bonds, 1935.

7. For every Rs. 100 (nominal value) of the 5 per cent. Bonds, 1935, tendered for conversion, applicants will receive Rs. 100 (nominal value) of the 3½ per cent. Loan, 1947-50, bearing interest from the 15th May, 1933, and the following payments in cash at the time of issue of the new securities :—

(*a*) Rs. 8 as cash bonus on conversion ; and
(*b*) interest accrued on the 5 per cent. Bonds, 1935, tendered for conversion, up to the 14th May, 1933, at the rate of 5 per cent. per annum.

6½ per cent. Treasury Bonds, 1935.

8. For every Rs. 100 (nominal value) of the 6½ per cent. Treasury Bonds, 1935, tendered for conversion, applicants will receive Rs. 100 (nominal value) of the 3½ per cent. Loan, 1947-50, bearing interest from the 15th May, 1933, and the following payments in cash at the time of issue of the new securities :—

(*a*) Rs. 11-8 as. as cash bonus on conversion ; and
(*b*) interest accrued on the 6½ per cent. Treasury Bonds, 1935, tendered for conversion, up to the 14th May, 1933, at the rate of 6½ per cent. per annum.

WORLD OF INDIAN FINANCE

Calcutta, April 28, 1933.

Money conditions have been sharply fluctuating. At one stage, there was great pressure, with rates rising to 2½ per cent. and 3 per cent. At another stage, the rates dropped and supplies were available without any special difficulty. Towards the close, however, there was a marked stringency in connection with the cash requirements for the New Loan, the list for which opened this morning. Business is reported to have been done at as high a rate as 5½ per cent. in Bombay. Comparatively speaking, credits have been less firm in Clive Street; but it was obvious that all possible spare resources were being absorbed by the applications for the cash section of the New Loan. There was considerable activity in the exchange market also, for the sole purpose of bringing in funds from London. Towards the later hours of Friday, however, the rate in both money and exchange markets slipped away, credits were available freely towards the afternoon. Exchange, after touching 1s. 6 5/64d., has declined to 1s. 6 1/32d., with good buyers at 1s. 6 1/16d.

The market during the current week has been dominated by the New Loan announcement. It is unfortunate that the announcement was made at a time when the technical position of the market was most unsatisfactory. Operators in the market had kept a considerable over-sold position. On the settlement on March 20, the *budlee* effected on the Bombay stock exchange was Rs. 1½ crores. In addition to this, deliveries on a fairly large scale had been taken. There was, thus, nearly Rs. 2½ crores of scrips undigested in the market. If the New Loan had been delayed, this unhealthy position could have rectified itself by readjustment in giltedge prices and by the weeding out of the weak holders. In a position in which there were such heavy purchases in excess of the capacity of the market, the New Loan has rushed the market into still more over-bought position. The financing of so large a quantity of scrips is causing real strain. At one stage, arranging of loans against securities was found really difficult. If the market is left to find its own level and find, by itself, a way out of this complicated situation, the result would be that there should be a flood of selling orders. Prices should react sharply, and it would be most unfortunate if such a calm should set in at the end of a loan which has evoked splendid response. After a loan in such fine performance, every effort should be made to consolidate the position of the giltedge market.

It should be the aim and endeavour of the Government to prevent a disruption. If the authorities stand aloof on the plea that speculators had no business to overdo their tactics, and that it is not the job of the Government to come to the rescue of professional gamblers, it will be an ungraceful return to a body of men who alone are responsible for having created conditions in which the borrowing rate of the Treasury could be brought down to so low a level as 3.80 per cent. If the authorities continue the policy which they have been pursuing since last January, we are assured that such defects as there are in the technical position could be easily rectified. If, however, out of any whim, the policy of inaction is preferred, the kind of debacle that was witnessed in 1929 after the success of the cash loan is not unlikely. We are most anxious that the present moment, in which every factor conducive to the consolidation and strengthening of all influences bearing on giltedge is present, should evoke from the Government right action in the right way. There is no need, however, to take any pessimistic view. Even when left to its own resources the market should take a month or so to disgest the excess stocks carried by it. In other words, if the Government intervene, there is, straightway, a most healthy market created, both as to the present and future, for giltedge. If the Government do not intervene, there may be some reaction but, in the space of a month, the upward trend must be resumed.

The exchange market has witnessed sharp oscillations. Due to pressure for money the Rupee-rate rose to 1s. 6 5/64d. There were a few trade bills.

The closing rates are: 1s. 6 1/32d., April-June T. T.; 1s. 6d., July-September T. T. and 1s. 5 31/32d., October-December T. T.

Bills may be quoted: 1s. 6⅛d., for May; 1s. 6 3/32d., June-September and 1s. 6 1/16d., October-December.

Union rates for call money may be quoted 1 per cent.; and for one month, two month and three month deposits, 1, 1⅛ and 1¼ per cent. respectively. But bankers were willing to offer better rates for term deposits in view of the payment for money for the New Loan.

GOVERNMENT OF INDIA

$3\frac{1}{2}$ PER CENT LOAN
1947-50

Conversion Section open till 13th May but may be closed at any time when an approximate total of **Rs. 15** crores is reached,

Subscriptions may be in the form of

(i) $4\frac{1}{2}$ per cent Bonds, 1934,
(ii) 5 per cent Bonds, 1935, and
(iii) $6\frac{1}{2}$ per cent Treasury Bonds 1935

For every **Rs. 100** (nominal) of $4\frac{1}{2}$ per cent Bonds, 1934, 5 per cent Bonds, 1935, and $6\frac{1}{2}$ per cent Treasury Bonds, 1935, **Rs. 100** (nominal) of the $3\frac{1}{2}$ per cent Loan, 1947-50, will be given together with a **Cash Bonus** of **Rs. 6-2, Rs. 8** and **Rs. 11-8** respectively.

Fuller particulars on application to the Local Head Offices and Branches of the Imperial Bank of India and at Treasuries.

FINANCE ABROAD.

International economy and finance are still in the process of adjustment to the depreciation of the dollar. In the first place, in so far as the American devaluation is taken for political and not economic causes, the reputation of America as a reliable financial centre must inevitably suffer. That such opinion is not altogether absent may be seen from the definite movement of all the leading exchanges in favour of sterling. The excess of funds which must result from such movement will, of course, have its normal effects on security prices. Secondly, it will take some time before nervousness in regard to other gold standard currencies ceases. As on similar occasions previously, such nervousness has been accentuated, if not actually created, by bearish operations of a speculative nature. Even France has been threatened in this manner but it is absurd to suggest that the franc will go down before any such bear-raid, however powerful. Thirdly, the course of American prices and their reactions on the outer world form a subject of intense speculation. If the gold content of the dollar should be reduced by 50 per cent. prices in America should go up unless, of course, there are other factors tending to hold up such a movement. Till the time in which American costs go up commensurately with the increased levels of prices, American competition abroad should be felt to be keener. But if, on the other hand, American prices fail to respond to the devaluation, the outside world is bound to feel the impact of a powerful deflationary force. For American competition must bring about an inevitable cut in the prices of most products. So far as India is concerned, no such adverse effect has till now been felt. On the other hand, as a special correspondent points out in jute and jute goods in the Commodities Market section, jute goods have actually experienced higher prices and a very brisk demand. It has been suggested that in this case, the reasoning adopted by market speculators is nearer the mark than that of *Indian Finance* or other informed economists. We should point out in this context that ours was a purely *a priori* reasoning pointing to a trend inevitable in a theoretical outlook. If the advantage of America from a lower dollar should enable her to stimulate her exports, such increased prosperity in the export trade might well be reflected in an increased demand for India's burlap. To say that such causes have already come into operation is at best only premature. For the present, the rise in the prices of jute goods should be attributed solely to the rise in commodity prices in America consequent on the abandonment of the gold standard. It is yet too early to detect specific instances of the effect of American devaluation on other countries. For the present, it has served to awaken the whole world to an adequate sense of the improvement of an early return to gold standard. However much one might wish that the world had been spared this unsettlement, it is difficult to persuade oneself that the preliminary conference at Washington would have the same sense of reality about the world financial position in the absence of the recent developments in America. At present, France, U.S.A. and England are alike interested in the stabilisation of world's currencies. The differences between the two countries may be said to have fairly reduced themselves to the exact rate at which the cross rate could be maintained. While Britain favours a rate of 3.50 dollars, America would prefer 4.00 dollars. It may be hoped that before long this difference would be adequately bridged.

That the abandonment of the gold standard was not inevitable may be seen from the manner in which the American authorities are carrying on with their programmes. If at the time of the re-imposition of the embargo, it was made quite clear that the authorities would not decline to release the amounts held by the Federal Reserve Bank in earmark and that facilities for their export would be afforded as and when necessary. Following the announcement of the Federal Reserve Bank that 2,199,000 dollars of gold would be released from the foreign earmarked amount the exported to England, it is reported that Britain has started calling in 250 million dollars of earmarked gold which she has acquired through the operations of the exchange equalisation fund prior to the suspension of payments by the United States. The rapidity with which the Bank of England has been able to carry on its purchases of gold encourages the hope that when the time comes for an agreement between the two powers for a return to gold standard, there would be little or no difficulty of a practical nature in the way of giving concrete effect to such an agreement.

Probably as a preliminary to the financial operations, the prospects of which have been discussed in our Overseas columns, the treasury announced a 500 million 3 year Treasury notes at $2\frac{7}{8}$ per cent. It is reported that Mr. Woodin, Secretary for the Treasury stated that the object was to test the appeal of government securities to small investors. In other words, it was a failure and the result is that the 500 million dollar issue announced on April 14 was oversubscribed on the day it was opened.

After endless trials and tribulations, the French Budget has at last emerged in its final form from the Chamber of Deputies which pased the Finance Bill by 514 votes to 67. Revenue is now put at 45,914,900,000 francs and expenditure at 15,092,025,000 the deficit being 4,177,125,000 francs. The Chamber has adjourned for the Easter recess until May 16. And these figures are subject to revision by the Senate. The Government proposals in the form in which they were presented to the finance committee involved estimated expenditure of 48.8 milliards and estimated revenue of 45.8 milliards leaving a deficit of 3 milliards. The committee take pains to point out in their report that if the 3,500

(*Continued on page 750*)

BANKING:

It is sometimes said that, in speaking of simple transactions, Bank officials are prone to use terms which, far from being enlightening, are calculated to make confusion worse confounded in the ears of the customer seeking an explanation why he should do this or not do that. Branch Managers of Lloyds Bank are always willing to explain to customers and others the "Why and the wherefore" they should do a thing one way in preference to another.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

COMMUNIQUES AND RETURNS.

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Tuesday, April 25. The total amount offered was Rs. 1,77,75,000. Tenders at Rs. 99-11-6 were accepted in full and those at Rs. 99-11-3 were allotted approximately 88 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1,50,00,000, the average rate of accepted tenders being Re. 1-3-0 per annum.

Tenders for Rs. 1½ crores of three months Treasury Bills will be received on Tuesday, May 2, 1933. Successful tenderers should make payment on Friday, May 5. Other conditions are as usual.

STERLING TENDERS.

The Controller of the Currency notifies that all tenders for sterling received on Wednesday, April 26 were rejected.

On Wednesday, May 3 £1,000,000 will be offered for tender on the same conditions as previously announced.

THE GOLD STANDARD RESERVE.

The balance of the Gold Standard Reserve on the 31st March, 1933, amounted to £40,000,000 and was held in the following form:—

	£
1. Cash at short notice at the Bank of England	897
2. British Treasury Bills	16,251,612
3. Other British and Dominion Government Securities	9,969,157
4. Gold—	
In England	2,152,334
In India	11,626,000

Agents & Stockyards throughout India:

THE TATA IRON & STEEL CO., LTD.

Sales Office: 100, CLIVE STREET, CALCUTTA.
Telegrams:—"IRONCO

CALCUTTA SHARE MARKET.

Jute.—This section witnessed lively advances during the period under review. The raw material market improved to Rs. 31-4, and although the mills were not prepared to follow the advance, being well stocked with goods, still sellers were very reserved and in sympathy Hessians also improved to Rs. 9-4-6. The consuming centres were also interested and with an all-round improvement in commodity prices in America, and heavy turnover in Wall Street, prices of Hessian also proportionately improved. The speculative shares improved five points during the week, which has happened after two years of dull and apathetic trading. Howrahs were done up to Rs. 48-5, and Kamarhattys Rs. 480. On Monday Howrahs opened at Rs. 43-8 and Kamarhattys at Rs. 430. Business which had been confined to such enquiry as came from speculative quarters, expanded enormously and nearly the whole range of jute shares participated in the general enquiry. All Rs. 100 denominations advanced 30 to 50 points during the period. Albions improved to Rs. 270, Anglo-Indias to Rs. 345, Auckland to Rs. 210, Ballys to Rs. 145, Barnagores to Rs. 147, Belvederes to Rs. 385, Budge Budge Rs. 365, Caledonians Rs. 510, Cheviots Rs. 240, Orients Rs. 225, Dalhousies Rs. 396, Naihatti Rs. 400, Lawrence Rs. 520, Kinnisons Rs. 700, Standard Rs. 330 and Unions Rs. 420. Among the Rs. 10 stocks Clives advanced to Rs. 28-12, Nationals Rs. 23-8, Presidency Rs. 6-12, Empires Rs. 39, Northbrooks Rs. 51, Reliance Rs. 73-8. The closing tone of the market is very strong and an upward movement is expected.

Cotton.—There was a slightly better feeling noticeable in this section owing to the introduction of the Anti-Dumping Bill in the Assembly and an expectation of further protective duty on cotton goods. Larger turnovers took place in Kesoram cotton roundabout Rs. 3-14 while Bengal Nagpores improved to Rs. 22-4. A single deal took place in Dunbars (Pref.) at Rs. 140 while the Ring preferences were done at Rs. 90. New Ring (Ordy.) had buyers roundabout Rs. 65. With a little improvement in cotton position, New Ring 7 per cent. Preference and 7 per cent. Bowreah 'A' Preference are specially attractive in view of the large arrears of dividend attached to these.

Coal.—Dealings were very restricted in this section owing to unremunerative prices of coal. A few scattered dealings took place in Bengal coal at Rs. 215, Standards were placed at Rs. 20-8 and Burrakurs Rs. 8-12.

Miscellaneous.—Public utility concerns were dealt at hardening rates, and a fairly large turnover resulted. Bengal telephone had buyers at Rs. 15-2, and sellers at Rs. 15-4. Burma Corporation improved to Rs. 8-10, although at the close they were a shade easier at Rs. 8-8, Cuttack electrics, Dacca electrics and Patna electrics changed hands at Rs. 6-2, Rs. 13-8 and Rs. 12-8 respectively. Indian galvanising had buyers at Rs. 9-4, while Indian Iron and Steel improved to Rs. 5-8. Associated Hotels (Ordy.) were placed at Rs. 3-2, while British India Corporation (Ordy.) and Deferred were quoted at -/15/- and -/9/-. With an improvement in the price of Jute Midnapore Zemindary advanced from Rs. 68 to Rs. 72. Port Shipping was wanted at Rs. 11. Among sugar shares, the zest of the enquiry appears to have been satisfied for the present. Cawnpores were quoting Rs. 36 with sellers over. Samastipores changed hands at Rs. 18, New Savans had buyers at Rs. 18-8 but later on receded to Rs. 18-2. Balarampore Sugars had buyers at Rs. 11-4, while Ryams had scattered deals at Rs. 47-4. Purtabpore came to business at Rs. 17-12 and Basti at Rs. 245.

Banks & Railways.—Imperial Banks, fully paid and partly paid had buyers roundabout Rs. 1,225 and Rs. 295. Central Banks came to business at Rs. 22 and Bank of India Rs. 100. Only a small turnover resulted in Light Railways, Darjeeling-Himalayan Railway were placed at Rs. 85-8.

Government Securities.—After the apathetic dealing of the last week the New Loan announcement of Tuesday gave new life to dealings in Government securities. 3½ per cent. Paper improved to Rs. 88-12 and 1960-70 to Rs. 99-12. 5 per cent. 1945-55 was quoting Rs. 113, while 6 per cent. 1933-36 bonds were placed at Rs. 100-12. Other issues were fairly steady. There was very good enquiry for Preference shares. 8 per cent. Preference of good concerns fetched as much as Rs. 135. Hukumchands (Pref.) were wanted at Rs. 104, while Birlas had buyers at Rs. 91. Barnagores (Pref.) were popular at Rs. 53. The Bank rate remained unchanged at 4 per cent.

Teas.—On approval of the Tea Restriction scheme by all Tea-producing countries of the world, there was some enquiry for good concerns. Bhatkawas were placed at Rs. 34-8, Hassimaras Rs. 29-8, Oodlabari Rs. 12-4 and Rajabhat Rs. 28, Tukvars Rs. 21-12 Tejpore Rs. 3-2.

A Victorious Announcement !

CHRYSLER

PLYMOUTH

A SIX

The new Chrysler-Plymouth adds to its long list of outstanding automotive achievements by becoming a Six. Thus does Plymouth celebrate its victory as the outstanding motor car value of the year. New Beauty, New Power, New Speed, New Flexibility, are built into the greatest combination of performance and thrift ever offered. Here is a FLOATING POWER Six in the lowest priced field which is designed, engineered, and built for those who demand the best. See the new Chrysler-Plymouth Six.

FRENCH MOTOR CAR CO., LTD.

DELHI CALCUTTA LUCKNOW

JUTE AND JUTE GOODS.

An occasional correspondent writes:—

After a long spell of almost daily declining prices, all sections of the jute trade have in the last few weeks been experiencing a mild boom. Immediately after the news of the reimposition of the American embargo on the export of gold was received here the price of hessian dropped down to as low as Rs. 7-10 for 40″×8 oz. and that of jute to Rs. 23-14 per bale for May future.

From these low levels there has been a very sharp rise. Hessian has improved from Rs. 7-10 to Rs. 9-7 and jute to Rs. 31-10. Howrah shares touched Rs. 49-8 on Thursday last. The gunny operators who had been reduced to the condition of those fish which burrow themselves into mud during a certain portion of the year, are showing signs of life and activity. The jute mills of Calcutta, which were finding it difficult to find buyers for forward contracts prices. The bazar dealers have been ready buyers for all that was on offer. It is estimated that during the last three weeks the jute mills of Calcutta have sold large quantities of hessian and heavy goods. A part of this has been taken by American buyers. It is reported that since the abandonment of gold standard by America a fairly large business has been done by shippers with North America which has taken a very active interest in Calcutta goods.

It may be remembered, in this connection, that when the news of the embargo on gold was first known here, many well-informed people were inclined to think that owing to the depreciation of the dollar this action will have an adverse effect on our exports to America. It was apprehended that the dearness of exports in terms of dollars may cause a shrinkage in demand. The Calcutta and Bombay speculators, however, took a different view of the situation. They argued that just as England was able to better its export trade by going off the gold standard, America too would by the help of a depreciated currency be able to sell more goods abroad, which will mean more demand for burlap. The speculators were supported by the rise that took place in the commodity prices in America after the placing of the embargo on gold.

The rise that has taken place in jute goods has proved that in this matter at least the uninformed opinion of the speculators has been nearer the mark than that of the experts.

The improvement in the price of hessian from Rs. 7-10 to Rs. 9-7 is due almost entirely to the feeling of optimism in America. American buyers in anticipation of better business conditions are reported to have bought considerable quantity of forward contracts. In my opinion, the position of the hessian market was inherently sound even before the advent of the rise in American prices as a factor. The price of hessian looked like improving but was kept down from doing so by the weakness in the raw jute and jute bags section. The stimulus given by American demand has proved so strong that not only has the price of hessian improved considerably but hessian has in turn pulled up the price of jute and jute bags. The large imports and the prospects of increased sowings for the 1933-34 season had the effect of depressing the price of raw jute. But the sale of a large quantity of manufactured goods has brought out the jute mills as buyers. The Continental spinners are also reported to have booked a fair amount of business.

The question that requires very careful consideration is whether the rise will last. I believe that in the near future the course of jute goods market will depend very much on the developments in America. Barring the possibility of any serious adverse developments in the international sphere, the position of hessian seems to be very sound. Even if the shipments to North America are equal to those of last year there is bound to be a considerable reduction in the stock of hessian in Calcutta during the next four or five months. The River Plate shipments have been better than expected. Stocks there are reported to be small. I believe, therefore, that, barring temporary reactions, there is no possibility of any serious decline in the price of hessians.

I do not feel the same amount of confidence for raw jute. It is believed that the sowings for the 1933-34 season will be at least 10 per cent. more than those of the previous season. This will mean a crop of 90 lakhs bales. However, if the price of hessian continues to improve, there is bound to be a rise in the price of jute, too, in spite of the prospects of the next crop being satisfactory. The rise, however, may not be in proportion to the rise in the price of manufactured goods.

Our Commercial Correspondent writes:—

During the week very steady conditions prevailed in the jute market and a further sharp rise was noticeable. Business in ready Firsts was done up to Rs. 30, while the Futures May touched Rs. 31-8. The crop prospects are favourable and sowings according to Messrs. Sinclair Murrays report are satisfactory. A spell of dry weather is required. Sowings for the week ending April 22, are estimated as below that at the same period last year.

	This year. Annas.	Last year. Annas.
Narayangung ...	10	13
Chandpur ...	18	16
Chaumuhani ...	15	16
Akhaira ...	12	14
Niklidampara ...	10	16
Sarsibari ...	10	16
Mymensingh ...	8	9
Serajung ...	13	10
Bhangora ...	8	4
Madaripur ...	9	12

The general condition of the crop in all the districts is satisfactory. River levels in most cases are higher than last year. The steady conditions in the market were due to a very healthy goods market, where a sharp and steep rise in values has taken place during the current week. Business was freely done by mills as well as shippers at advancing rates. European LR and XLR was done up to Rs. 5-8 and Rs. 5. Fairly large amount of business was done both by shippers and mills. It is considered that the rise has been too sharp and steep and that a reaction in prices is due. The tone towards the close was easy.

The quotations are:

Ready Firsts London ...	£16 15 0
,, Lightnings London ...	£16 0 0
Ready First Calcutta ...	Rs. 29 8 0
,, Lightnings Calcutta ...	Rs. 28 0 0
Futures May ...	Rs. 30 0 0
Jat LR	Rs. 5 8 0
,, XLR ...	Rs. 5 0 0

Jute Manufactures.

Further steady conditions have prevailed in the market during the current week, and an all round advance in values is to be recorded. Hessian nine porter was done up to Rs. 9-7 and Heavy Cees up to Rs. 24-8. Mills have sold large quantity of hessian and heavy goods for all positions up to the middle of next year. It has been fully absorbed by the local bazar. The rise has been due to reports of inflation and rise in silver in U. S. A., followed by the demand for hessians from that end. The rise has been rather very sharp and steep, and the opinion of the market is that a reaction is due now. Technically the market seems to be overbought and any slackening in demand even for a small period will force the weak holders to liquidate. Towards the close the tone of the market was easy.

Dundee.—During mail week a moderate quantity of business was done in yarn and jute cloth. Coarser varieties of yarn were more in demand, finer ones being more or less neglected. In jute cloth a fairly good business was done in sympathy with better rates from Calcutta. Heavy goods are, however, still quiet, there being no business to report in linoleum cloth.

London.—During mail week business in London jute market was quiet, continental shippers buying a few odd lots here and there. Prices were on the whole steady with a firmer undertone.

The market in Germany has been very slow with a small amount of business passing. Prices are more or less unchanged. There was, however, not much interest taken in the trade.

BULLION

GOLD.

In the Bombay market, after having been firm during the previous week, feverish fluctuations have been witnessed. This fact, combined with the violent movements in the dollar and franc cross rates in London hampered trading locally. The April settlement for which heavy deliveries were effected passed off quietly, and some gold was bought for export by banks. Mr. Roosevelt has put forward proposals for a reduction in the gold content of the dollar by international agreement. The receipt of the news has had a temporary depressing effect on gold which declined from Rs. 30-1-6 early in the week to Rs. 29-10, improving later to Rs. 29-13-0. The price at the time of writing is Rs. 29-11-3 for ready, Rs. 29-11-0 for first settlement, and Rs. 29-10 for second settlement. In consonance with this, the price of sovereigns also declined from Rs. 19-5 to Rs. 19-1-6 for ready, and May 10 delivery was quoted at Rs. 19-0-6. Last week's shipment per s.s. "Castalia" amounted to Rs. 47.28 lakhs and per s.s. "Strathnaver" to Rs. 96.43 lakhs. The daily offtake is still poor at 3,000 tolas and stocks are estimated at some 3½ lakhs tolas. The highest and lowest rates were Rs. 29-15 and Rs. 29-10 for ready, Rs. 29-15 and Rs. 29-9-9 for May 10 settlement and Rs. 29-13 and Rs. 29-8-9 for June 9 settlement. Total imports during the week amounted to Rs. 1,20,009 in bar and coin.

London.

Gold reserves of the Bank of England have been steadily increasing for some time past, and the signs are that this movement will continue. It amounted to £176,532,791 on the 5th instant—an increase of £4,693,741 as compared with the 27th March. Purchases of bar gold made by the Bank during the week under review amounted to £1,978,181. At the same time, large amounts of bar gold have been available in the open market in London. Some purchases were made for the Continent but the larger portion of the purchases was for a destination undisclosed. The price of gold per fine ounce registered a steady increase from £6-0-9½d. to 6-1-8d. during the period from April 6 to April 12. Since then the price has declined and stands at £5-19-0, having touched £5-18-0, a few days before. Imports continue to be on the heavier side, the total imports between midday of the 3rd instant to midday on the 10th, amounting to £5.1 millions, and the exports during the same period to £1.6 millions, the net imports being £3.5 millions. Shipments from Bombay were substantial. During the week ended April 5, the total amount of gold shipments was £683,000. The s.s. "Rawalpindi" carried £647,000 of which £181,000 is consigned to London, £102,000 to Amsterdam and £364,000 to New York and the s.s. "President Hayes" has £36,000 consigned to Marseilles.

SILVER.

The local market was very erratic throughout the week. Business in the earlier part of the week was done as high as Rs. 61-10 but later it declined to Rs. 58-12 on London advices being down by a penny and a half. The decline in London was due to American sales, but was only shortlived. The market immediately rose again to 20½d. the local price rising again to Rs. 59-12. Technically the market is bull but the margin in the hands of long holders is fairly large to allow them to carry long in spite of short and temporary declines; consequently the position is very satisfactory.

London.

The price of silver in Air Mail Week has been subject to wide fluctuations, as a result of speculative buying. The reports of the conversations now being carried on in America have set operators thinking as to the effects on the market of the proposals for raising the price of silver and for America to accept payment of war debts, in part, in silver. The question of increased use of the white metal is to come up before the World Economic Conference. The conversations on Tuesday last are said to have been concerned with some form of bi-metallism and the substitution of silver as currency backing commensurate with the reduction of gold cover. Should these proposals be carried out, the prospects of silver are very bright. In addition to this, proposals are also being put forward for a restriction of the production of silver.

In the London market, in the first half of the week ending April 12, silver was quiet with China and the Indian bazars working both ways and America continuing to give support. On the afternoon of the 10th instant following the receipt of the American conversations, there was a keen demand for America, and on the 11th instant further buying for this quarter and other speculative enquiry carried prices to 17 15/16d. for cash and 18d. for two months delivery, representing a rise of 9/16d. over the quotations of the previous day. Shanghai exchange evinced small interest in the advance and with buyers hesitating, China selling caused a reaction on the 12th to 17⅞d. and 17 11/16d. for the respective deliveries. The price of silver spot has since risen to 20 7/16d. Under the present circumstances, the condition of the market is uncertain, and the maintenance of prices would appear to be dependent largely on speculative demand.

It was announced on 6th April that the Chinese Government now require transactions to be made in terms of new silver dollars instead of in taels; the new dollars are exchangeable for taels on the basis of $100 for 71.50 taels. It is stated that in making the dollar the only legal currency, the Government apparently expect to force the banks to desert the tael, and in furtherance of this object have, in addition, imposed a 2¼ per cent. export duty on silver in order to induce the banks to have their silver minted, the cost of mintage being the same as the new duty. According to the new parity, the sterling price of the dollar was 1s. 2 7/16d. for ready and 1s. 2 9/16d. for forward at the close. After the holidays, the dollar opened at 1s. 2⅜d. and after declining to 1s. 2 5/16d. closed at 1s. 2¾d.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 3rd inst. to mid-day on the 10th inst.:—

Imports.	£	Exports.	£

TEA AND COFFEE

There was no sale of tea in Calcutta during the week under review.

Foreign.

Tea shares appear to have been in better demand, according to reports received of Air Mail Week. The anticipation of the salutary effects of the Restriction scheme, on which there is now complete agreement among all the interests concerned, would appear to have lent this strength to the shares. Better prices have been available, the tone being very firm, and in many cases the prices have been marked up, although the transactions reported are not numerous. Sir Joseph Bhore's statement in the Legislative Assembly with regard to the restriction, has been understood as having carried the scheme into completion.

According to an Amsterdam correspondent, the Netherlands Indies Government, in putting into operation the measures for restriction, will treat European estates and native growers as far as possible on an equal footing. During the period of the restriction, the standard output of native tea will be from 15,000 to 17,000 tons per annum. It is understood that a committee will be appointed in each district to control the purchase of tea from the native growers and to decide all other questions arising from the Restriction plan. The Government have dropped the idea of fixing minimum prices for native tea as the difficulties in the way could not be overcome.

According to a special report issued by the Amtorg Trading Corporation, New York, the area under tea cultivation in Georgia has increased rapidly, reaching a total of 22,000 hectares in 1931. It is estimated that the year 1932 has added 15,000 additional hectares to all the tea plantations, and by the end of the second Five-Year Plan these plantations are to reach a total area of 100,000 hectares; the aim of the growers being to meet the entire domestic demand for tea by 1937.

Figures relating to the movements of tea in London in March compiled by the Tea Brokers' Association give imports at 25,264,000 lbs. as compared with 26,298,000 lbs. in the corresponding month of last year. The Indian figures were 10,174,000 lbs. against 9,241,000 lbs. and the Ceylon total 8,982,000 lbs. against 9,380,000 lbs. There was a heavy drop in imports from Java and Sumatra, which amounted to 5,760,000 lbs. as compared with 7,451,000 lbs. As regards deliveries, the Dutch figures are very striking, the total being only 4,450,000 lbs. against 12,959,620 lbs. in 1932 and 9,959,000 lbs. in 1921. Indian deliveries in March amounted to 24,879,000 lbs. against 28,349,000 in 1932 and those of Ceylon to 11,675,000 lbs. against 10,888,000 lbs.

The London stock at the end of March is reported at 275,640,000 lbs. as compared with 213,309,000 lbs. at the end of March last year and 242,180,000 lbs. in 1931. At the end of February of the current year it was 292,071,000 lbs.

At the London auctions on April 24, 30,400 packages of Indian Tea were submitted for sale. There was a good demand. Common and low medium sorts experienced a keen competition and were generally a farthing per lb. higher. Good medium qualities were irregular and barely maintained rates. The best sorts sold well. The following were the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day's auction per lb.
Common Pekoe	7½d.	7¾d.
Common Broken Pekoe ...	7¾d.	7½d.
Common Orange Pekoe ...	7¾d.	8d.
Common Broken Orange Pekoe	7¾d.	8d.
Common B. P. Souchong ...	7¾d.	8d.

The following are the value prices:—

Clean Common Pekoe ...	7¾d.	7⅞d.
Clean Common Broken Pekoe ...	8d.	8¼d.
Clean Common Orange Pekoe ...	8d.	8⅛d.
Clean Common B. O. Pekoe ...	8⅜d.	8⅜d.
Clean Common B. P. Souchong	8d.	8d.

On April 26, 22,100 packages of Indian tea were submitted for sale. There was a good demand for all descriptions but little change in values. The following were the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day's auction per lb.
Common Pekoe	7¾d.	7¾d.
Common Broken Pekoe ...	7½d.	8d.
Common Orange Pekoe ...	8d.	7¾d.
Common Broken Orange Pekoe	8d.	8d.
Common B. Pekoe Souchong ...	8d.	8d.

The following are the value prices:—

Clean Common Pekoe ...	7⅞d.	7⅞d.
Clean Common Broken Pekoe ...	8¼d.	8¼d.
Clean Common Orange Pekoe ...	8⅛d.	8⅛d.
Clean Common B. O. Pekoe ...	8⅜d.	8⅜d.
Clean Common B. P. Souchong	8d.	8d.

At the London Auctions on April 25, 27,200 packages of Ceylon tea were submitted for sale. There was keen competition. Common kinds were generally a farthing per lb. higher. Other sorts were firm, except plain medium broken orange pekoe teas, which were rather irregular and occasionally in buyers' favour. The following were the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day's auction per lb.
Common Peokoe	7¾d.	7¾d.
Common Broken Pekoe ...	8d.	8d.
Common Orange Pekoe ...	7½d.	7⅝d.
Common B. O. Pekoe ...	8¼d.	8¼d.

The following are the value prices:—

	Last auction per lb.	To-day's auction per lb.
Clean Common Peokoe ...	7⅞d.	8d.
Clean Common Broken Pekoe ...	8d.	8⅛d.
Clean Common Orange Pekoe ...	7⅝d.	8d.
Clean Common B. O. Pekoe ...	8½d.	8½d.

WHEAT.

CROP FORECAST 1932-33.

According to the third All-India wheat forecast recently published the total area now reported under wheat is 32.29 million acres against 33.66 million acres at the corresponding date last year, showing a decrease of 4 per cent. The total yield is now estimated at 9.12 million tons as against 9.30 million tons last year or showing a decrease of 2 per cent. The general conditions of the crop is reported to be satisfactory.

The market in Calcutta during the week under review has ruled very steady with a small advance in values. The steadier feeling was partly due to steadier conditions prevailing in other markets, and partly due to the rain in the Punjab and dust-storms in certain districts of U. P. causing damage to the harvested crop. The price of spot wheat has also improved on account of a small rise in rice maize and pulse.

The quotations are:

Cawnpore Ready	...	Rs. 3-9-6
Beta May	...	,, 3-6-6
,, September	...	,, 3-9-6

London.—The recovery that took place in the prices of Cereals last week have been well maintained. Wheat specially has shown a further advance in American and European markets. The winter wheat crop of U.S.A. is estimated at 334 million bushels against an actual yield of 462 million bushels a year ago.

SHELLAC.

After ruling steady during the earlier part of the week the market has since ruled a shade quieter. The demand from consuming centres is very poor and the hedge sales against new crops are rather heavy.

The quotations are:

		Rs.	A.	
T. N.	...	18	8	per maund.
S. T. I.	...	19	0	,, ,,
I. T. N.	...	17	0	,, ,,
Superfine	...	21	8	,, ,,
Seedlac	...	12	12	,, ,,
Sticklac	...	10	4	,, ,,
Kirilac	...	2	8	,, ,,

London.—During mail week the market in London was slightly better as buyers were attracted by very low prices and a fair amount of speculative business was put through. Garnet lac has remained unchanged while Button lac has fallen by two to three shillings per cwt. Stocks in London are estimated at little over 36,000 packages.

SUGAR.

The market during the week under review has ruled quiet and values are a shade easier. There has been no fresh business reported from Java except for Western India ports.

The quotations at the time of writing are:

Java White Ready	...	10	3	per maund.
Do. Afloat	...	10	3	,, ,,
Cawnpore Ready	...	9	4	,, ,,

Stocks in Port Commissioners and private godowns are estimated about 2,500 tons, while the stocks in the main Indian ports are:—

(In bags, 10 bags = 1 ton).

Calcutta (Apl. 19)	...	30,230	(Apl. 20)	...	85,000
Bombay (Apl. 20)	...	72,000	(Apl. 20)	...	115,000
Karachi (Apl. 22)	...	90,000	(Apl. 22)	...	160,000
Madras (Apl. 18)	...	25,000	(Apl. 18)	...	40,000
Rangoon (Apl. 15)	...	10,740	(Apl. 18)	...	13,180

London.—During the mail week the market rose sharply on the news that the segregation by Cuba of about 600,000 tons of the U.S.A. quota has been officially approved. The spot price of raw sugar in New York after rising to 3.1 cents per lb. has fallen back to 3 cents.

COTTON.

The rise that took place last week is well mentained. There was selling by weak holders and the market was easy. Since then a recovery has set in and the highest price touched for Broach July/August was Rs. 187-8.

CROP FORECAST.

MANCHESTER COTTON.

Messrs. James F. Hutton and Co. (Manchester) in their weekly report dated April 12 say:—

During the past week cotton prices have become firmer but customers have not as yet become used to this, and many offers, even for goods that are urgently required, have been made on a basis too low for consideration. There has been little news of outstanding interest from the States, where values have firmed up in sympathy with the commodity markets.

There have been reports of further rains in the Mississippi Valley aggravating flood conditions which have caused a certain feeling of nervousness. Sentiment in the States is reported to be better and hopeful mention has been made of the forthcoming Economic Conference at Washington. With regard to the new crop, Fossicks

HUDSON RAILWAY MATERIAL

Robert Hudson (India) Ltd.

Managing Agents: **MARTIN & CO.**

12, MISSION ROW, CALCUTTA.

Bureau states that an increase of from five to ten per cent. is generally expected.

There has been a fair amount of inquiry abroad but business generally has been rather slow, and inquiry unevenly distributed. While some traders have had little to do, others have been very busy quoting for a fairly wide range of styles.

While India has submitted a fair share, it has mostly been mail inquiry and cables have been few. A small amount of business has been offering for Calcutta in dhooties and specialities, but as yet bookings have only been meagre. Both Karachi and Madras have inquired for mulls, jacconets and other light styles, but here again business has been slow. Apart from a few offers from Shanghai for poplins and fancies little has been heard from China, while Java and Singapore have also been very quiet.

Although South America has been far from brisk some fair lines of plain finishing cloths and specialities have been booked. Little has been heard from West Africa but purchases of finishing cloths and drills are reported from South Africa. While Continental demand has remained slow, there has been moderate activity in the Home trade section. In the yarn section little business of any weight has been done.

FREIGHT.

The market has ruled quiet during the week without much business passing. The quotations are:—

(*Continued from page 723*).

In the Bombay market, silver was firm during the week mainly through firm advices from both London and New York. The feverish speculative activity caused by the various proposals now being discussed in the American conversations was reflected in other markets. A fair-sized amount of inter-bazar business was done here, but the daily off-take is still not very considerable being only 20 bars, while stocks continue at the figure of 7,000 bars.

The highest and lowest rates recorded were Rs. 59-3 and Rs. 56-5 for ready and April 15 settlement and Rs. 59-6 and Rs. 59-9 for May 13 settlement and Rs. 59-10 and Rs. 59-9 for June 13 settlement. Total imports during the week amounted to Rs. 18,485 in coin.

STOP PRESS.

The Controller of the Currency has issued the following Press Communique:—

Subscriptions to the Cash Section of the 3½ per cent. Loan, 1947-50, in the form of the 4 per cent. Conversion Loan of 1916-17 and Cash were allotted in full. Subscriptions in the form of Treasury Bills, the 5 per cent. War Loan, 1929-47, the 5 per cent. Bonds, 1933, and the 6 per cent. Bonds, 1933-36, received no allotment. The total accepted applications amounted approximately to 15½ crores as shown below:—

4 Per Cent. Conversion Loan of 1916-17	5.3 crores.
Cash	10.2 crores.
	15.5 crores.

2. Subscriptions to the Conversion Section of the loan so far reported amount approximately to 11½ crores.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

PROGRESS OF NEW LOAN.

The list for both the cash section and conversion section of 3½ per cent. 1947-50 Loan opened at 10-30 a.m. (S.T.) on Friday and it was announced within an hour that the list for the cash loan had been closed. At the time of writing, the list for the conversion section continues to remain open. Towards the afternoon, the following *communique* was issued by the Controller of the Currency :

> "The Cash section of the Loan has been closed. Subscriptions in the form of Treasury Bills and securities of the 5 per cent. War Loan, 1929-47, the 5 per cent. Bonds, 1933 and the 6 per cent. Bonds, 1933-36 have received no allotment. The percentage of subscriptions in cash accepted will be notified later."

Though the last sentence in the above Notification would give the impression that there would be *pro-rata* allotment, the market, however, anticipates that all applications in cash would receive more or less full allotment. It would appear that there would be more or less wholesale acceptance of whatever applications were tendered in due time; there would simply be no chance for those who "missed the bus'. In a sense, this is unsatisfactory. Many applicants, fearing only partial allotment, have applied for amounts far in excess of what they require or could digest. When they now come to realise that as against their expectation of allotment on the basis of 30 per cent. to 40 per cent., they will be getting more or less 100 per cent. allotment, it may well be that they are seriously embarassed as to how the total amount is to be carried. This means that there should be a fair amount of selling pressure caused by applicants who have received more than they hoped for and who would, therefore, now be content with realising whatever profit they can get. If, on the other hand, there had been a *pro-rata* allotment on a basis which approximated to market anticipations, it would have been a tactical move calculated to reduce to a minimum the number of those who would be inclined to sell for quick profit. On the one side, the fact that the Loan had been fully subscribed within a few minutes is a bullish factor of great significance. On the other side, that many applicants have, possibly, bit off more than they could chew is, certainly, a bearish factor whose measure and value it is necessary to understand aright.

* * *

From this point of view, the market for the next two or three days requires careful watching; and if any pronounced setback should manifest itself, the Government should intervene and purchase securities, utilising the proceeds of the Debt Redemption Fund. It would not do for the Government to feel that once the Loan had been a success they have nothing more to do in the matter. As a matter of fact, only one section of the Loan has been a success so far. The other section has yet to be made a success. It is quite possible that in the first few hours, applicants for the conversion loan might have come up to Rs. 10 crores or so. But, even so Rs. 5 crores still remains to be made up. Already in the giltedge market, the sentiment towards the close of Friday was definitely and distinctly quietish. There was a reaction in prices; and what is worse, the undertone was positively depressing. Unless there is a change in the tone and temper of the market in this regard, the completion of the remaining Rs. 5 crores will prove as tardy as the filling up of the first and major portion was swift and speedy. In the interest of making the Conversion Loan as outstanding a success as the Cash Loan, it is necessary for the Government to put new heart and new strength into the market. It is quite easy to put such heart and life into the market. All that the Government have to do is to buy some of the superfluous stuff in the market both in Bombay and in Calcutta. Such purchase need not exceed Rs. 25 lakhs. But this gesture would have a most important psychological effect at a most psychological moment. The financial authorities must feel and realise that the market looks up to them and expects them to lend timely support on those occasions when abnormal factors cause undue sagging. As we have pointed out on earlier occasions, the technical position of the market is that most operators are over-bought. The way in which allotment is expected to be made in respect of the cash loan might accentuate this over-bought position. The combined effect of these factors might be that the strength, that should arise from so quick an over-subscription of the Cash Loan, would, in large part, be nullified.

* * *

It is also necessary to remind the authorities that the present loan is by no means the last and final stage of the conversion programme. There is another hurdle or two to be negotiated. In view of the further stages to be accomplished, it is of the utmost importance that the giltedge situation is improved and strengthened on the present occasion to the maximum extent possible. Every factor is most propitious, barring the somewhat over-bought position of operators. This is a weakness in the giltedge situation to which we have drawn, repeatedly, pointed attention. In spite of such weakness in the technical position, the market responded most bravely to the New Loan announcement. That is to say, from the side of the market, it has behaved splendidly and co-operated in every way possible towards the success of the New Loan. From the side of the Government, it now remains for them to show that they appreciate the co-operation that has thus been offered. Such appreciation, in practical terms, means all those measures that are necessary for giving that momentum which will start the new giltedge era on a cheerful note of optimism. Just after the publication of the New Loan Notification, we made an earnest appeal to the Finance Member to undertake open market purchases with a view to administer a tonic to the drooping spirits caused by the issue price of the New Loan being lower than market expectations. We are gratified that our appeal was not in vain. It is equally important that at the threshold of what we believe to be an important epoch in the Indian giltedge market, the Government should make timely, adequate and suitable purchases. We have taken upon ourselves the task of enlightening the authorities on the technical position of the market from time to time and on the steps that should be taken in the light of such a position. We know that our views have been given careful consideration in the past. We hope that, in the present instance, our opinion would command a like respect. If it does, we have no doubt that the Conversion Loan would be subscribed by Saturday, and that the combined effect of the Cash Loan and the Conversion Loan being subscribed for in so short a time will inaugurate a phase of increasing vitality in the giltedge market—increasing in a way that the next instalment of the conversion plan could be put through on the basis of a 3½ per cent. loan at par. This is the aim and objective which Sir George Schuster should keep in view; if such is to be the aim and objective, the suggestion we have made should receive most earnest consideration.

ROAD-RAIL CONFERENCE.

The Road-Rail Conference which met at Simla on Monday has gone through its appointed task of considering a specially prepared agenda of eight resolutions, which had been specially prepared for it. In trying to estimate the results of the Conference it is only fair to bear in mind that there was at no time any intention of getting definite decisions from the Conference. The Government of India, on whose initiative the present enquiry into the problems of transport in this country was undertaken, have a keen sense of the complexities and difficulties of the questions connected with modern transport; and they are, therefore, particular, that not only should no precipitate action be taken, but that even opinions should not be allowed to crystallise before securing the necessary data and the requisite discussions of rival view-points. The starting point in this instance was the Mitchell-Kirkness Report which made an elaborate survey of the conditions of motor and rail transport. This report was foreshadowed by His Excellency the Viceroy in his speech at the opening of the Budget session of the Legislative Assembly. His Excellency also encouraged the hope that the consideration of the report might ultimately lead to the formulation of a number of schemes of road and railway development, which might prove a powerful impetus to the revival of trade. The conference which met at Simla was meant to be an opportunity for the ventilation of the various rival view-points enlightened, of course, by the report of Messrs. Mitchell and Kirkness. As one of the communiques issued during the course of the Conference points out, the intention of the Conference is primarily to afford opportunity for a full exchange of views with the object of determining in what direction action may be necessary. Obviously, we are yet a long way from specific conclusions. The proposals, which may be indicated by the discussions of the Conference, are to be referred for the consideration of Local Governments and other interests concerned; and doubtless this reference would be regarded as a full opportunity for the various interests throughout India to express their views in greater detail than at a conference of this nature.

A conference which is of a frankly inconclusive and deliberate nature must be of doubtful value. Our Simla correspondent points out in his letter published in this issue that only set speeches prepared beforehand were made in the conference. And for our part, we are not sure that the opinions expressed could not have been as effectively secured through correspondence. This is not to say that the points raised were of little importance. Though there was not that reconciliation of conflicting view-points, which is the proper objective of any conference, it is a notable gain that the government and the public are enabled to appraise the principles involved.

Given the restricted objective of the Conference, those who are responsible may be congratulated on the preparation of the agenda. We give below the principal resolutions discussed by the Conference :

(1) This Conference considers it desirable that measures should be concerted (*a*) for the prevention of further wasteful competition between railway and road transport ; (*b*) for the development of rural motor transport complementary with railways and (*c*) for the development of the road system in harmony with the objectives defined under (*a*) and (*b*) upon a comprehensive and more uniform plan than at present exists.

(2) In order to check the development of further wasteful competition, this Conference considers that the following measures would be justifiable :—

(*a*) The range of public service and goods motor transport in direct competition with railways should be limited to that within which it offers to the public a service substantially superior to that which the railway can offer.

(*b*) The control of public service and goods motor transport on parallel routes should be strengthened so that in respect of external control road and rail transports are on comparable terms.

(*c*) On parallel routes at least the number of vehicles licensed to ply for hire should be restricted so as to prevent competition as between motor vehicles and with railways at below the economic rate of fare.

(3) This Conference considers that the statutory provisions which at present limit the operation of motor services by certain railways should be repealed.

(4) This Conference recommends that the present regulations regarding public service and goods motor transport should be reviewed with the object of amending them so as to afford every encouragement to the development of rural services by the granting of monopolies for limited periods or otherwise.

(5) This Conference considers that in the interests of all concerned a co-ordinated plan should be drawn up for the taxation of motor transport by the various authorities concerned.

(6) This Conference considers that the present road development account should be continued at least for the duration of the present constitution but that the class of development to which it should be applied reconsidered.

(7) This Conference considers that it is necessary to study the question whether the present lack of balance in the road systems will, if the means of development are restricted to revenue resources, be susceptible of correction either at all or at a rate consistent with the economic needs of the country, and, accordingly, recommends that a comprehensive plan should be drawn up with a view to examining the possibility of development from loan funds.

(8) This Conference considers that suitable machinery should be established at the centre and in the provinces to ensure adequate co-ordination between road and rail transport and their future development.

All the resolutions clearly refer to questions of principle and have been drafted in an apparently inoffensive manner. It is at the same time possible to detect behind them a sneaking partiality for the Railways. For the Government are after all the proprietors of the Railways in India. The latter have been one of the chief sources of revenue to the State; and the argument that it is only an indirect levy on trade and industry has little practical importance. In a period in which the Railways have changed rapidly from the position of an income yielding asset to a liability, it is natural that a hard-pressed government is not quite friendly to motor transport which after all has its place in the shrinkage of railway revenue. It must be urged, however that this natural attitude of the Government should not provoke the public to any indiscriminate support of motor transport. For, every tax-payer is in the last resort the fractional proprietor of the railways of India. When they yield a surplus, he secures a positive or negative relief from taxation. When they incur deficits it is the tax-payer that in the last resort would have to foot the bill. It is to his interests to preserve the earning power of the Railways of India and maintain their character as a colossal public utility concern. Our comments on this question on earlier occasions should serve to dispel any suspicion of partiality for the railways. In India, where the attitude of opposition to Government plans and objectives is almost a habit, it is necessary to utter a warning against any slavish obedience to it.

The members of the Conference who represent the motor transport interests, were not slow to detect the bias in the draft resolutions in favour of the Railways. Sir Joseph Bhore by emphasising the importance of railway revenue confirmed such suspicions. Sir Guthrie Russel, it may be said, provoked an explicit protest by citing in full the case of the railways and by formulating a detailed demand for the imposition of specific restrictions on motor transport. He emphasised the obligations of Indian railways and said that they had to find each year a total of Rs. 103 crores that is, Rs. 50 crores for working expenses, Rs. 14 crores for depreciation, Rs. 33 crores for interest and Rs. 6 crores as contribution to General Revenue. The unfortunate results of the last few years were, of course, not due to motor competition but to the world economic depression. The Mitchell-Kirkness report estimated the loss to railways on account of motor competition

at Rs. 1½ to Rs. 2 crores; and it is reasonable to infer that, if the present position is allowed to continue, motor transport may cut a larger hole in the revenues of Indian railways. Sir Guthrie Russel pointed out in effect that the danger of motor competition ought not to be appraised merely by the loss of Rs. 1½ to Rs. 2 crores. Motor transport, it would seem, has taken the very cream of passenger and goods traffic. As regards the former, the third class passenger traffic which, as is well-known, forms 89 per cent. of these earnings has passed away to the motors at least in so far as short distance journeys are concerned. As regards goods, the low-paying heavy traffic has of necessity been left intact in the hands of the railways. But the highly paying traffic seems to be quite vulnerable. And Sir Guthrie Russel asks how the railways are going to meet their obligations if they are to lose their highly rated traffic. No general increase in goods rates is possible without doing serious damage to all forms of business; and as for decrease, it is a measure on which the authorities can embark only after mature consideration. Even if for certain classes of such traffic, contends Sir Guthrie, the most dangerous mode of transport is road-motor transport, the limited advantages would be far outweighed by a bankrupt railway system which has become a burden on the country. Thus any argument for the railways would be an argument for the Central Government, the Provincial Governments and indeed for the country as a whole.

* * *

While no one can accuse Sir Guthrie of exaggerating the significance of the Railways to the Government and the tax-payer, it may be asked whether there is no alternative to the solution which he suggests by implication. Sir Guthrie demands that road transport should have no unjust advantages over the railways. About the economic issues involved in this question of road transport being made to bear its just burdens, we have dealt at length in our issue of February 18. There seems to be behind the enumeration of these new burdens an anxiety to make them as numerous and heavy as possible. We have not merely sentimental bias in favour of motor transport. But it would be unfair to demand that working conditions in motor transport should be better than working conditions generally are in a country like India. It would be impracticable, too, considering that the majority of buses are worked by their own proprietors.

* * *

Now that the Railway authorities are themselves found to lay so much stress on the comfort of passengers, it is most opportune to ask what they have done in that regard. If the bulk of the loss in passenger traffic is on account of third class passengers, is it not a severe condemnation of the existing administration? The public is entitled to know what the Railways have done to retain the vanishing patronage of dissatisfied customers. To make clear the point we try to press, we adduce the instance of the Calcutta Tramway Company which has during the last few years successfully combated the competition of the buses. Fares were reduced, new types of season tickets were introduced, the cars were improved and by all tokens the Tramway Company is doing well again. That the Railways can make no such claim is a point which has an obvious bearing on the question on hand.

* * *

The Hon. Mr. E. Miller who represented motor transport protested against the suggestion of the original draft resolutions that the elimination of wasteful competition should be done only at the expense of motor transport. The true criterion in this matter is the public interest and convenience. It is for the railways to show a more genuine regard for economy and business administration. Even though the mobility of motor transport invests it with certain advantages over the railways, we still believe that the loss on account of third class passenger traffic could be considerably minimised. The Railway authorities owe it to themselves to explore all the avenues of efficient management before they attempt to cover up their defects with an outcry against motor transport.

* * *

With all possible improvement in railway administration, it would still remain to solve the main problems connected with road and rail. And as we have already said, the public interest is the sole criterion. The preservation of the profit-earning capacity of the railways is certainly a matter of public interest; and care must be taken to see that the profit is not merely an inconsiderate levy on the travelling public and trade and industry. Duplication of communications is obviously a waste of public resources. And in India we are fortunate in that we are not faced with an insoluble dilemma. The Mitchell-Kirkness Report points out clearly that the co-ordination of road and rail transport is a less complicated matter in India. Where existing bus services run parallel to railways, it is necessary to ascertain that the services are run on an economic basis. The impression has gained ground that most bus enterprises are really losing concerns, in which the owners are often unable to detect, much less appraise, the exact loss. Perhaps this is true in some cases; but in the majority of cases, they are as much sinned against as sinning. If the railways complain that the buses have been let off lightly in the matter of the costs of the track, so might the buses contend that they get so little for all the diverse levies and taxes which they pay to a whole hierarchy of powers from the local board to the puissant Central Government. We are convinced that a satisfactory solution of the problems would be facilitated, the moment it is recognised that it is less a question of deciding on conflicting claims than of rationalising the whole transport industry. The buses would joyfully welcome certain regulations which would protect them from the baneful effects of indiscreet ventures. If the interior and the mofussil could be opened by a system of combined monopoly and license—a system that would assure the pioneer of the fruits of his spadework—much of the pressure on certain areas would be relieved and road transport would look with less disfavour or suspicion on the present movements.

* * *

It is, however, in regard to road development that the authorities will find themselves faced with a number of embarrassing problems. In the background is the eternal uncertainty of the Reforms and the kind of constitution that is to be imposed. The conference has passed a few tentative resolutions regarding the continuance of the Road Development Fund. While the railway and road transport interests growl against each other over the supposed conflict of their interests, the representatives of the provincial governments are jealously mindful of any interference in their shperes of administration or taxation. Yet it stands clearly to reason that the multiplicity of petty local authorities in whose inefficient and unequal hands has been left the care of the roads must go. Administrative reform, there is bound to be; and whether the autonomy of the provinces and other federating units is to be preserved is matter of constitutional importance and should have no practical import. A far more important question is whether road development can be content to rely on revenue allotment or whether it will before long have the same phase of capital expansion as the railways had in the twenties. A two-fold development of inland transport in the present state of business is indeed, a happy prospect to contemplate.

BRITISH BUDGET.

The press messages received in India on the British Budget are so scrappy that our own comment has, necessarily, to be brief and somewhat general. On receipt of our Air Mail correspondence, we hope to be able to deal with the subject at length in the issue of the second week of May. Meantime, it is obvious that Mr. Neville Chamberlain has played for safety and avoided anything like unusual or daring proposals. In these days when budgets have gone awry in most countries, the very balancing of budgets as in the case of Britain and India must be reckoned a thrilling event. The details of the budget are, doubtless, dull ; but the general result of the estimates is of special interest, as betokening the recovery of the intrinsic strength of British finances. It may be said, in broad terms, that the recovery in the British budgetary position has not made as brave a showing as the recovery in the position of London as an international money market. Immediately after the downfall of sterling in September 1931, it looked as though London had received a cruel and staggering blow. The depreciation of sterling in terms of gold became greater and greater. All foreign balances were being withdrawn. And in all international gatherings on economic questions, the countries still wedded to gold talked with a superior air. It was, however, possible for the British monetary authorities to intervene in a way, in which, while fluctuations in sterling were reduced to a minimum, the depreciation of the currency was used as an important factor in the rehabilitation of the country's trade and finance. Far from sterling losing prestige and status, it acquired a new status and prestige by becoming the standard of value in a growing area of sterling countries, that is to say, countries whose currencies were linked in some manner of parity with sterling. At the same time, the freedom from gold trammels was used for such cheapening of credits in the money market as paved the way for the launching of the conversion loan programme on terms most favourable to the Treasury. Not only were funding operations on a large scale put through but interest charges were reduced by over £30 million annually.

* * *

There was, however, again an interruption last November by the discussions and negotiations as regards the payment of the December 15, instalment of Britain's war debt to America. This was responsible for grave unsettlement and uncertainty. But as soon as the payment was made in gold, recuperation set in again. Since January, Britain has been acquiring considerable amounts of gold and foreign exchange. Inclusive of the 250 million dollars of gold to be repatriated from America in respect of the earmarked holdings of the Exchange Equalisation Fund, the total acquisition of gold by Britain in the last four months would be in the neighbourhood of £150 million. The full details of the operations connected with the Exchange Equalisation Fund are not known. But it seems safe to say that the net result woud be that the gold stocks of the Bank of England would be increased to between £275 million to £300 million. Let it not be forgotten that all these gold holdings are valued on the old basis. On revaluation in terms of 3.50 dollars or thereabouts to the pound, the gold stocks of the Bank of England should be well over £400 million. From this point of view Britain is now in a sufficiently strong position to contemplate, with equanimity, the return to gold standard. Summing up the financial, monetary and budgetary changes that have occurred in Britain, we may say that

(1) sterling has regained much of its former position ;

(2) London as a financial centre commands more confidence than any other financial centre ;

(3) sterling, at the time of relinking to gold, will be relinked on a parity more in consonance with the needs of British economy;

(4) England has acquired enough gold to be able to re-establish gold standard on a secure basis ;

(5) conversion operations on a giant scale and on most satisfactory terms have been put through, affording considerable relief to the budget ;

(6) though eventless, the British Budget has unique significance in that it is one of the few budgets of the world in which balancing has been achieved.

* * *

In view of these factors, it is not surprising that the British Chancellor of the Exchequer laid as much stress on the general financial situation as on the budgetary proposals, in the course of his budget statement. A bad budget reacts on the money market of the country ; and a bad money market reacts on the budget of the country. Money market conditions in London have been made appreciably healthier ; and this is the dominant factor in the British Budget—the source of its strength and the main cause of its balancing.

WASHINGTON TALKS.

The pilgrimage to Washington is fairly over and the pilgrims should soon be on their return journey with the appropriate tokens of their piety. Mr. Ramsay MacDonald is as usual in raptures over the results; and in an interview in New York he affirmed "We have done real good business." He was careful enough to add that no agreement had been concluded and "we are just as free as when we came." Neither Great Britain nor any other part of the world is likely to share with the British Premier his enthusiasm for this kind of freedom. It was not to defend it from hostile attacks that this erstwhile tribune of the working classes sallied forth across the waters of the Atlantic. Rather was it his purpose to devise those restrictions on national action which in a higher metaphysical sense are the condition and essence of economic freedom. The true criterion of judgment, therefore, would be how far Mr. MacDonald has progressed towards the very opposite of what he now glories in as his achievement.

* * *

To appraise the work at Washington, one must be clear as to what is required for the revival of world trade. The remedies suggested vary from a simple and crude suggestion of restriction of commodity output to elaborate plans for a new economic order. The latter could, for purposes of the present discussion, be ruled out of consideration; for the statesmen are professedly working for concerted international action; and economic opinion in the various countries of the world are at best unequally advanced towards socialism. It is therefore within the present framework of economic society that reform and repair are to be attempted. And if we so circumscribe the scope of our enquiry, we may say that there is the greatest common measure of agreement on a few points. First comes the necessity of avoiding any premature resumption of the payments of large political debts like reparations and war debts. Next comes the mitigation of the evil of tariffs. And closely allied to it is the network of restrictions like exchange control, quotas, etc. These in turn could not be removed unless the currency and financial policy of the nations are put on an agreed basis. Above all is the immediate and imperative need for contriving a rise in commodity and other prices without which insolvency must spread ruin far and wide.

These, in short, form the budget of proposals on which international agreement has to be secured. And in almost all these matters America holds the

whip-hand. She is the pre-eminent creditor of the world and is the ultimate recipient of by far the greater part of reparations payments. She was, and has been up till now, the foremost votary of the false idol of excessive protectionism. Like Mammon, she had her eyes fixed on the immense stocks of gold, rather than let them feast on the vision beatific of an America succeeding to an industrial and economic Empire far more vast and grander than that of the British. She was the cause, no doubt to some extent, unwitting, of that squeeze for gold and that panicky protection of currency which has led to world trade being caught in a net of exchange restrictions. And finally, she has met the representatives of foreign powers with a nice bouquet in the shape of a devalued dollar.

* * *

It is to the credit of the present administration in America that it has paved the way for a more healthy outlook on economic questions. The change that had happened in the fortnight following the re-imposition of the embargo on gold exports is discussed at length in our Overseas' columns. What Mr. Roosevelt saw perhaps dimly before his advent at the White House, the banking crisis has brought home painfully to the masses of the American people. There is less disposition to view war debts from the standpoint of legal rights. The advocates of high protection are no longer shouting their fallacious theories from the housetops. Even in regard to such a point as Britain's return to the gold standard, America is not so insistent as before and recognises that any such action must be part of a wider agreement among the nations. As for the rise in commodity prices, America is any day more keenly interested in measures towards that end than other countries, for low prices have all but ruined the whole of the Federation with widespread insolvency. The depreciation of the dollar was itself deliberately engineered to render the reconstruction of banking and finance easier.

* * *

Thus conditions in America are on the whole quite favourable to the purpose for which Mr. MacDonald, M. Herriot and other leading statesmen proceeded all the way to Washington. The details of the conclusions arrived at have not yet been divulged. Nor are the outlines so far vouchsafed sufficient to give any clear indication of the upshot. But it may be presumed, without fear of being too wide of the mark that the monetary measures were tackled first. And the principal objects of any such measures may be described in three phrases: (1) stability of exchanges through a definite link with gold; (2) inflationary movement either through a reduction of the ratio of gold reserve or the admission of silver to a higher monetary status than it has enjoyed since the close of the last century and (3) the stimulation of business enterprise in each country through capital expenditure by the State. M. Herriot has been instructed by his Cabinet to demand an early return to the gold standard and the difference between Great Britain and the U.S.A. is confined to the exact level at which the cross rate should be fixed. We may take it therefore that if fundamental conflicts do not emerge this difference would soon be bridged over. As regards the inflationary movement, British statesmen have so far shown no leanings towards the resuscitation of silver. We feel that we may say without fear of contradiction that silver is a question on which the Far Eastern nations and America have a substantial identity of interests. And so long as Great Britain has nothing to lose by increasing the price of silver, a general agreement on this question would not be difficult of achievement. We are afraid that it is not sufficiently realised in Europe that any improvement in the price or status of silver is a measure of world-wide inflation without the drawbacks which the expansionist policy of a central bank would necessarily have to suffer from. For the latter would inevitably have to be supplemented by measures for pumping money into circulation, as the experience of the last twelve months has clearly shown.

* * *

Though silver might do this trick, it would still be necessary for the governments of the world to agree on a programme of capital expenditure with the same simultaneity as Mr. Keynes stressed in his world-famous articles on the "Means to Prosperity." Mr. MacDonald has evidently imbibed the ideas of the eminent British economist; and it is reported that Mr. Roosevelt is also planning a nation-side attack on unemployment. France is not less in need of such artificial stimulus to business; and the smaller nations need only a reassurance against dangers to their currencies and a promise of resumption of international lending to join in the big drive against unemployment and trade depression. With a general return to the gold standard, an improvement in the status and price of silver and an agreement as to capital expenditure by the State, world trade may be said to have the necessary full complement of monetary reforms.

* * *

It is in regard to tariffs that friction and conflict would be most felt. Exchange restrictions may be relaxed with the restoration of order in international finance. But the tariffs and the quotas which are closely allied to them are by now part of a new system of national economy. America might even go so far as to evince the proverbial zeal of the convert for moderate free trade. But for the majority of countries, not excluding Great Britain, relaxation of the regulations would mean that the elaborate facade built in recent years would have to be pulled down and the national economy exposed again to the buffetings of an ill-ordered world. We are for our part convinced that for a time at least the nations must be content with the purely monetary remedies, using the respite which they would afford for a more thorough examination of international economic relations. What the future may hold for world trade we shall not endeavour to foresee now. For the present we see less conflict of purpose among the nations than there was till even a month ago. And if the improvement would bring about a move from the deadlock, however little, we shall have had the first reliable sign of revival.

In my periodical visits to Simla or Delhi, I make a point of breaking journey at Cawnpore, even if my stay could be only for a few hours. For one thing, I have a miscellaneous crowd of friends, belonging to varied walks of life but all agreeing in leanings towards a hedonistic philosophy. Eat, drink and be merry—is a motto that appears congenial amidst people with the United Provinces way and mode of living. Some of my Cawnpore friends do not drink; but others make up for this deficiency. In any case, they do all believe in a sunny, cheery, care-free life. I return, after a few hours or days spent with them, a sunnier, cheerier and less care-worn man. For, truth to tell, my gaiety is all on the surface. Hedonism is far from being my creed. Philosophically, I am a rationalist. I think too seriously of the morrow and miss the fun of the day. I plan for the future and forget to understand the present aright. The transience of things seems so obvious that I keep chasing the will o' the wisp of the eternal and the permanent. I would be, I know, a rich man if I could but take the fullest advantage of what the present has to offer. I am content to bask in the inagination—inspired happiness of the greater glory and riches which the bigger opportunities in the times to come will yield me. I am an idealist whose lot is to do with the stern realism of day-to-day progress in the business and financial world. Realising my defect, I seize, with both hands, the opportunity of contact with people who understand, and live, in the present, and who have a clear idea of what is now and here. Cawnpore affords me such a contact; and I do all I can to enter into the spirit of the surroundings. It does me a lot of good; and I am grateful for the widening and strengthening of my experience.

* * *

Over the circle of my Cawnpore friends, Mr. Ramnarain, the Treasurer of the Imperial Bank, presides with graceful reserve and sumptuous but unostentatious hospitality. Mr. Tholal, the shrewdest lawyer in Company Law, in India, is his friend, philosopher and guide. And, between them, they gossip away on all that has to be known of men and matters in their City. What Ramnarain does not know of the worth and tales of men is not worth knowing; and what Tholal does not know of company matters and scandals is, likewise, not worth knowing. They are an encyclopaedia of business and businessmen in that part of the country. My first introduction to Tholal was over the amazing disclosures in connection with the promotion of the New Victoria Mills. I was myself—in all innocence on my part—involved in Boulton's dealings in this matter. The two biggest shareholders were put in at my suggestion and on my plan. When I came to know the how and what of the conspiracy, I felt that in fairness to the unfortunate shareholders, the affairs of the Company should be cleansed up. Towards this end, the late Halwasiya brothers (who had a big stake) and Mr. C. G. Ashworth who represented the Alliance Bank of India joined hands with me in trying to get the management transferred to Begg Sutherlands. A series of mishaps—intrigues and counter-intrigues—tactics of those who had secured power and possession—these defeated the purpose we had in view.

* * *

Meantime, Tholal had persuaded Mr. Ashworth to file a suit against those who had made money on the promotion. It was protracted litigation, where there was much misunderstanding and almost deliberate misrepresentation of the part which Tholal played in the proceedings. But Tholal stuck to his guns. Quickly and surely, he spread his net over all those who were involved in the sharing of the fabulous profits. His opponents were first inclined to dismiss him as a man of no moment. They then started imputing to him sinister designs. Ultimately, they found themselves reduced to sue for peace. The New Victoria Mills case ended in a triumph for Tholal as a lawyer and a relentless prosecutor of those who would not easily disgorge ill-gotten gains. The Company was benefitted to the extent of over Rs. 50 lakhs by the surrender of shares by the defendants in the case. The entire credit is Tholal's. But the real power has gone to others, who did not and would not, in the earlier stages, join Tholal in the Company's fight. Tholal has won the case for the New Victoria Mills. But others have won the New Victoria Mills itself—thanks to a scheme of deferred shares. If the shareholders had a due appreciation of the service which Tholal had rendered them, they would have honoured him fittingly, instead of being content with managing directors more or less self-appointed on a scheme which has made this a family arrangement. But Tholal remains unconcerned—the eternal cigar in his mouth and a Buddha-like look of calm on his face.

* * *

The New Victoria Mills affords the best approach to an understanding of what Cawnpore was and what Cawnpore is. Great and far-sighted industrialists built up Cawnpore—Cooper and Allen, West and MacRoberts and Muir. They built, brick by brick, great industries. They tended their concerns with parental solicitude and pride. They looked upon their ventures less as profit-earning propositions than as properties, the owning and control of which should be a source of self-esteem and service

to society. Each unit of what now makes up the British India Corporation was a first-class business concern, in which the comfort of those who worked in it was fully provided for. Their finances and business side of affairs were scientifically and adroitly handled. At the same time, they were not soulless corporations. The human beings who worked for them were treated with a becoming consideration. Factory premises were kept neat and natty. Bungalows, cosy and comfy, were provided for officers. Quarters for all clerical staff. Cooly lines, bright and airy, for labour. What was true of the components of the B.I.C. was true of all the concerns that grew up in Cawnpore. With the result that the place grew to be the cleanest and most thriving industrial city in India. Those who built up Cawnpore have every cause to be proud of what they did to the cause of Indian industrial regeneration, to the city and to its citizens.

* * *

So long as the Cawnpore Companies were under the care and management of industrialists who looked after them as they would look after their own children, the structure of business in that city, from every point of view, was all that, ideally, it should be. Then came the boom of 1919-21. The old men had also to retire from India or to retire from the World altogether. Then, some of the concerns changed hands ; new capital schemes were put through ; there was much watering of capital. From this point onwards, the business concerns of Cawnpore came to be divided under two heads—first, those still wedded to the old type of management in which those who looked after affairs had a large proprietory interest ; second, concerns whose capital was inflated and in regard to whose management considerable change in *personnel* had occurred. The old families like Kamalapet, West and Horseman are still associated with concerns in which they are more or less complete owners. The Swadeshi Mills, the West Mills, the Muir Mills and the Kamalapet Mills are examples of the old style of finance and management. Highest efficiency and the fullest integrity in finance are the dominant features in the management. Even in the worst days of depression, these companies make a brave showing. The personal touch in the management and the personal stake in the concern account for their success, which must be considered as outstanding in a period when most of their compeers in other parts of India have been doing ill. Of the companies whose structure has been adversely affected by watering of capital and cumbrous reorganisation, the B.I.C., and the New Victoria Mills stand out as painful episodes in the annals of Cawnpore business. Even in regard to the latter concerns, drastic writing down of capital has been effected since, in order to write off the evil effects of the wild experiments made early in the last decade. But they are still far from the stage of assured comfort and prosperity which concerns like the Muir Mills enjoy.

* * *

In this hierarchy, Begg Sutherlands occupy an unique place by themselves. Their two cotton mills are, perhaps, the weakest link in their chain. Their real strength is in their being first-rate managers of sugar concerns and in their association with city electric supply and tramways. Though the old men have retired and gone, the new men have been unwilling to depart from the conservative methods they had inherited. And in the booming conditions which the sugar industry has been witnessing in the last two or three years, Begg Sutherlands have, in a vast measure, improved their position and enhanced their status. Mr. Lowrie and Mr. Wilkinson, the two Managing Directors, are young in age but quite determined to keep up the traditions of the old industrialists who built up Cawnpore.

Equally fortunate is the B.I.C., in its more important affairs resting in the hands of Mr. A. L. Carnegie, who has had as formidable a task as Hercules had in the cleaning of Augean Stables. But he has been pruning things carefully and tactfully ; and with the next favourable turn in trade, B.I.C., under his care, should be able to re-establish for itself something of its old position.

* * *

What New Victoria Mill was prior to 1919 with its neat, little capital scheme of Rs. 12 lakhs or so, Cawnpore, too, was ; and a good portion of Cawnpore is to-day. What new Victoria Mill is to-day, a section—fortunately only a small section—of Cawnpore industry is to-day. However, as this industrial centre has still ample contact with whatever is clean and honest in business and amongst those connected with business, I have full hope that the mistakes and misfits of 1919-21 will be set right by the sheer assertion of commonsense and good sense on the part of those who are proud of Cawnpore as a great and good industrial centre. Even in these days when depression has hit most concerns in Cawnpore though in a slighter degree than elsewhere, and when some of them must pass through a considerable shake-out before they are on a stable basis again, Cawnpore City, with its spruce mills and factories and coolie lines, stands out in striking contrast to the dirt, smut, filth and slums of a place like Ahemedabad. Modern inlustry has not spoilt the fair face of Cawnpore ; in fact, it is modern industry that has made Cawnpore what it is—a clean, prosperous and busy place where to all who need work, work suited to varied tastes and capacities is available in full measure.

* * *

With all this business, it is not surprising that Cawnpore has developed its commercial asscciations with a view to further and strengthen the interests of the business community. The Upper India Chamber of Commerce, as a mercantile body, has a unique place among the associations of this nature. It is neither invariably pro-British in causes good and bad like the Bengal Chamber of Commerce or fully pro-Indian to the extent of identifying itself with politics, as some of the Indian Chambers of Commerce are prone to do. The Upper India Chamber has a mixed membership of Europeans and Indians. Both communities have a strong voice in the committee. The Chamber has shown great capacity for good work carried out with detailed care and painstaking study. Above all, it has maintained a reputation for independent thinking. On many an occasion, it has differed from its colleagues in the Associated Chambers of Commerce. It was the one member body of the Associated Chambers, that strongly stood against eighteenpence ratio. The reasons for this attitude of the Chamber are simple. A body like the Bengal Chamber is made up of all classes of businessmen—industrialists, exporters, importers, bankers, insurance men etc., etc. In its deliberations, the voice of the British industrialist in India does not count to any great extent. It is the British manufacturer and the British importing firm in India who have a far bigger say. On the other hand, the Upper India Chamber represents industrialists in a predominant degree. When one comes to think of it, the interests of the British industrialist in India and of the Indian industrialist have much in common. This accounts for the Upper India Chamber agreeing, on many occasions, with the pleas and representations put forward by Indian industrialists. Here lies its unique character and its special strength. Mr. Ryan, its Secretary, is keen and versatile and fastidious about the maintenance of the reputation it has built up.

* * *

The Indian businessmen of Cawnpore have had their own association in the U.P. Chamber of Commerce. This Chamber has achieved considerable importance in the United Provinces. It is an electorate for the Local Council, Cawnpore Municipality, Cawn-

pore Improvement Trust, Railway Advisory Committees, etc. All this power has meant that there has always been a tendency on the part of some clique or other to secure its control. Those who have such control in their hands could always use the Chamber as a pocket borough. There is nothing surprising in this as every chamber of commerce tends to become a pocket borough. Be this as it may, Rai Bahadur Vikramajit Singh, its President, has been, it is complained, retaining all power in his hands and all important seats amongst his friends and relations, he himself being on the local council as representative of the Chamber for over a dozen years. Is a mere lawyer to have the entire destiny of a commercial body in his hands? Is a mere lawyer to monopolise the seat on the Legislative Council on behalf of a commercial body for umpteen years? These are the questions posed by those who have, on this plea, set about starting another association called the U. P. Merchants Chamber. The Rai Bahadur is not a mere lawyer, he has large business interests. He has been, for long, a director of important companies. He has the largest experience of Company Law. He has considerable stake in industrial concerns. The allegation that he is a mere lawyer cannot hold water. But it seems to me that he is doing no great service to the Chamber by giving rise to the impression that being in the seat of power, he means to continue to use that power as he thinks best. If he wants the Chamber to come to the front, he must be capable of self-effacement and recede into the background.

* * *

The new Chamber is godfathered by Mr. Kamalapet. His son, Mr. Padampet Singhania, is moving Heaven and Earth to get the new chamber receive due recognition. To divert the official status from the old chamber to the new, the plea put forward is that a caucus is in control over the old one. But Mr. Padampet must know that while his claim as regards the freedom of his chamber from caucus may, for the time being, be justified, it will be no easy matter to keep any commercial body of this kind from the machinations of cliques. Anyway, Mr. Padampet Singhania is himself a great industrialist and businessman and commands a large following. Whatever the success that attends his efforts to get his chamber to share in the power that the U.P. Chamber of Commerce enjoys, there can be no doubt that he has sufficient influence and connections to be able to gather to the new chamber an influential body of members. Meantime, Mr. R. P. Bagla does not let the grass grow under his feet. He is striving, might and main, to apply the monkey-gland treatment to the old chamber. The present fight has its use if it wakes up people from apathy and torpor.

OLYMPIA.

(From Our Correspondent.)

Simla, April 25.

I do not wish to begin these notes by flattering *Indian Finance;* but it so happens that its attack on the cotton industry last week has been very much talked about here. The cheap argument that the Japanese are prompting such a propaganda, it is admitted by all, does not hold good in the case of *Indian Finance,* whose loyalty to the best interests of India, as a whole, has always been above question. At the same time, the argument used by it has caused some pain to those who would like to think more in terms of help to the Industry by the Taxpayer than the claim of the consumer to economic production.

* * *

The attitude of Government is one of helpfulness but its position is one of utter helplessness. Helplessness, because a Bureaucratic Government has neither the necessary knowledge, nor the strength of public opinion behind it, to hammer the Industry into shape. And yet the Government feels that the Industry has not done all it could to help itself out of its difficulties. The result is a vicious circle.

* * *

The Government will help only tardily and each step it takes in that direction is so belated and so conservative that by the time it is put into force Japan has more than neutralized it!

* * *

The Japanese spy service is so powerful that even before the Government announces a decision, it is known at Tokio. It appears that Government thought that a duty of 75 per cent. instead of the existing duty of 50 per cent. might suffice for the next six months. And the Japanese have already guaranteed the importers against the risk of additional 25 per cent! This is the dilemma; and Sir Joseph Bhore is puzzled about it. He is new to his job. He is anxious to promote the best interests of this premier Indian Industry; but he has to contend against intractable facts.

* * *

The cotton interests have told him that unless he strikes a heavy blow—by giving even more protection than the immediate necessity of the hour—he would not be able to overpower Japan. That is true. Because in such cases the psychological factor is of great importance. Once Japan knows that the India Government means to stand by her cotton industry, she would come to terms. But the India Government has the interests of the consumer to protect. How can this be done at the same time?

* * *

Officialdom is puzzled. Perhaps the talented editor will find a way out. One suggestion made to me here is that the Government should immediately give generous protection to the cotton industry for six months and utilize that period for calling a conference at which sentiment would be set aside and all the sources and phases of mismanagement exposed. Thereafter the incompetent may either be allowed to die out or forced to amalgamate with the more efficient units.

* * *

But even that seems impossible. For the moment I hear that the Government is about to announce its programme of further protection to the cotton industry and that protection will be limited to the immediate needs of the situation. The Government view probably is that the problem is too big to be handled with any hope of final success.

THE READING ROOM

I referred last week to my thesis on the inadequacy of monetary reform as a cure for the depression.

Mr. Fred Henderson has the same theme in his *Foundations for the World's New Age of Plenty*, a little booklet of about a hundred pages, in which he pleads hard for economic thinking being related to the goods and services which, after all, are the only true means of economic satisfaction, rather than being misled by that phantom of economic value, the medium of exchange. To show that the utmost technical knowledge we can gather about matters of finance would be of no use or avail in the tasks with which we are faced, Mr. Henderson recalls the confessions of one of the world's foremost financial authorities, Mr. Montagu Norman: "The difficulties are so vast, the forces so unlimited, so novel and precedents are so lacking, that I approach the whole subject not only in ignorance but in humility. It is too great for me. I am willing to do my best." Mr. Henderson would seem to suggest that Mr. Montagu Norman's despair is due not so much to the insolubility of our economic problems, as to the purblind tenacity with which economists and statesmen have been clinging to monetary reform as the sole means of revival. It only stands to reason that in a depression in which all economic relations are completely out of joint, we should think out the problems involved from the very fundamentals of economic science. If goods and services are the sole means of economic satisfaction, and if no one can possibly have a right to such goods and services unless he contributes to their production, the most rational economic system would be that in which no claim other than that of a real producer would be heard. Under present conditions, however, the administration of money and currency is such that claims are established in advance on future production with which the claimants have little or nothing to do.

The only economic reality is the provision of actual goods and services for the satisfaction of human needs; and nothing enters, or can enter, into it other than human activity dealing with the natural resources of the world in the effort to make that provision and keep it going.

Within this framework of real things there is nothing which in any way corresponds to the finance idea of "credit."

Credit, according to Mr. Henderson, is the device by which all productive activity is made to appear as work for graded wages paid to the workers in advance. Mankind lives on its reaped harvest; but the doling of grain is in the present system wage for future work in the finance accountancy which money and credit have made possible.

"All such finance accountancy will be found, on examination, to be a procedure for reckoning this current usage and handling of existing supplies as the incurring of a debt to finance for permitting the usage or making it possible; and for setting up, in that reckoning, claims against future products for the payment of the debt. Our existing finance procedure is simply the costs-and-prices accountancy by which the indebtedness is made to work out in the reckoning."

This is not so much the ingenious invention of an ingenious few as the result of the absurd system of property under which we live. For every productive activity, the producer has to pay to the owners of the instruments of production. And the wherewithal for such payment has to be got only from the banker or the financier. So that the real workers have two layers of tyranny super-imposed over them. One is that of the owners of property; and over them are set the financiers. The result is that current goods cannot be bought except with the wages paid for further production on which the propertied classes will secure a right and against which the banker would make an advance. In such a system "the market is, in effect, a sieve, with its mesh of costs and prices dimensioned in this way so as to pass only the small potatoes through to the actual producers, in accordance with the proportion of those prices which has been accounted to them as remuneration, and distributed to them through the disbursement-costs of production as their allotment of purchasing power in the market." Goods do not pass out from the producing system direct into use and consumption. They pass out only through this market sieve of the property system; and their marketing, so far from being a process of social distribution, is a process for ensuring that "nothing shall escape from the property system into use and consumption without thus yielding up in prices the satisfaction of these claims of ownership upon it."

The logical result of it is that there can be no increase in production or consumption unless the owners of property and credit at the top have an increase in their claims and belongings according to a certain proportion. The world has been able to progress in a way under such conditions. The depression and the relative overproduction, which is its distinctive feature, are proof positive that no progress is passible if economy is to run on the toothed wheel of private profit and private ownership of instruments of production. So long as this "system" is accepted as inviolable, nothing can secure a genuine revival of trade. Mr. Henderson justly observes that any attempt to reform modern economy through mere monetary reform is like trying to improve the physique of a man by changing the contours of his shadow. Or to cite another of his similies, it is like giving artificial respiration to a drowning man and keeping him still under water. Mr. Henderson's is the usual socialist thesis; but his argument is new and convincing. Though his style leaves much to be desired, his writings are a necessary complement of orthodox economic treatises.

GREAT BRITAIN.

NATIONAL FINANCE IN 1932-33.

Within a week, the Chancellor of the Exchequer will have to present his budget to Parliament. 1929 was a crisis year for Great Britain as to all the world. This is hence the third budget of the crisis period, during which successive Chancellors have had to wage an unequal fight for solvency in the face of an unparalleled economic depression. And during this period, it is actually the first budget which holds forth the promise of a surplus. The occasion is hence appropriate for taking stock of the extent to which the crisis is revealed in increased economy and reduced revenue.

During the last three years, despite the imposition of additional rates, the yield by taxation has been showing a progressive shrinkage. In 1930-31, for instance, income tax accounted for a revenue of £256 million. But in 1932-33 it went down to £251 million although, in the interval, the rate of tax had been raised from 4sh. 6d. to 5sh. in the pound. In like manner, surtax receipts went down by £7 millions though there had been an increase for 10 per cent. in the rate of taxation. Inland revenue yielded £19 millions less in 1932-33 than it did two years ago in spite of the enormous additional burdens cast on tax-payers in Mr. Snowden's time. As a result of additional duties, excise and customs alone, of all sources of Government revenue, yielded increased income. But it has to be noted that even these items failed to come up to the Chancellor's expectations. In the wake of the crisis, the tax-payers were called upon to make almost heroic sacrifices for the protection of budget solvency. But the fact remains that all the sacrifices put together could not yield an increase of more than £23 millions in a budget of the magnitude of about £715 millions. It is thus evident that the limit of the taxable capacity of the people has been reached, and further additions to revenue must come not from further enhancements of the rate of taxation, but from the increased productivity of trade and industry.

On the expenditure side, the reduction in the cost of the national debt has been a notable achievement of Mr. Chamberlain's regime. In 1930-31, the cost of interest on the public debt, excluding sinking fund allocations and payment of the War Debt instalment to America, was £277 millions. In 1932-33, it was £262 million. And in the coming year it may actually go down to £225 million. A saving of £50 million has thus been effected in the cost of the public debt within the last three years, and this is by far the most satisfactory result of the Government's recent financial administration.

Unfortunately, the improvement reached in the reduction of debt charges, is not accompanied by similar achievement in regard to other items on the expenditure side. On the other hand, except in the case of defence and education which together account for a saving of £5 million, there has been almost an all-round increase in the level of public expenditure. For example, in spite of the automatic decline in the cost of war pensions since 1930-31, the charges for Old Age and other pensions have grown from £466 millions to £471 millions. The cost of the Ministry of Labour is expected to be £10 millions more in the coming year than in 1930-31. The net result of all the increased expenditure on the various items is to swallow up all but £9 million out of the saving of £50 million achieved in respect of debt charges.

Mr. Chamberlain, it is estimated, will have an income of £715 millions in 1933-34, as taxes now stand. In the opinion of *The Economist*, he will probably have to make provision for expenditure next year of some £706 millions. The margin of £9 millions left is apparently a vast improvement on the state of affairs reflected in the successive deficits of recent years; but the appearance is to a great extent false and illusory. The estimate of expenditure assumed by *The Economist* makes no provision for the payment of any further instalments to America on War Debt account. At the moment, it is problemmatical how far the Chancellor's hopes of a remission of the Debt will be realised in future. In the event of their being disappointed, Mr. Chamberlain will be confronted with a heavy deficit instead of a light surplus, and along with it, he will have to face a most difficult budgetary problem.

The Clearing of Slums.

A circular issued by the Ministry of Health last week to local authorities promises a vigorous programme of slum clearance in the immediate future under the provisions of the Housing Act of 1930. The circular apparently marks a change from the policy of economy and hesitancy introduced into the housing problem in 1931. The present plan of the Government seems to be to promote a regular drive in slum-clearance so as to reach the rate of clearing 40,000 houses a year for the next five years. With this end in view local authorities are requested:—

(a) to prepare and adopt a programme, comprising:—
(1) a list of the areas in which clearance is necessary, with information of the number of houses to be demolished in each, and of the number of their inhabitants;
(2) a list of the areas in which improvement by way of reconditioning or otherwise is necessary;
(3) a time-table for the initiation, progress and completion of action to secure clearance or improvement, as the case may be, of all these areas; and
(4) a time-table of re-housing co-ordinated with the displacements contemplated by the time-table of clearance operations;
(b) to make an immediate beginning with the programme by the declaration as clearance or improvement areas of such as can be immediately dealt with and by making the necessary orders.

With adequate finance safeguarded, most local authorities would find no difficulty in preparing suitable clearance schemes, but their execution is a matter of some complexity on account of the opposition to slum clearance of the owners of the property, and in some cases, of the tenants themselves, due to fear of being forced into accommodation at higher rates of rent. Moreover, slum-clearance involving the replacement of defective houses with structures of a superior type, is but part of a larger problem of national housing, of which the most important part is the provision of urgenly-needed additional accommodation for the working classes. To deal with this and other difficulties, the Government have appointed a committee with Lord Moyre as Chairman, which is expected to take some time to draw up its report.

Road And Rail Traffic Bill.

The text of the Road and Rail Traffic Bill has been issued. The Bill is based on proposals contained in the Salter Report, and provides for the establishment of a Transport Advisory Council to advise the Minister on the co-ordination, improvement and development of transport.

Part I of the Bill embraces a scheme of licensing and regulation of goods motor vehicles. The licensing authority is to be the Chairman of the traffic Commissioners for each area.

There are to be three types of licenses:—

The public carrier's license, valid for two years, required by regular hauliers whose whole business consists in the carriage of goods for others.

The limited carrier's license, valid for one year, which meets the case of the dual user who uses his vehicles both for general haulage and for his own purposes.

Air Mail Week.

The vehicle must be maintained in a serviceable condition ; must comply with the appropriate limits of weight and speed ; drivers must comply with the requirements of the Road Traffic Act, 1930, regarding hours ; and, except where impracticable, records of hours and journeys must be properly kept.

Failure to comply with the conditions of a license may entail suspension or revocation. An appeal tribunal is set up to be composed of three persons, including a chairman of legal experience.

The Minister is given power, after consultation with the Transport Advisory Council, to prohibit or restrict the use by vehicles of specified classes and descriptions of roads by any specified class, on grounds of public safety or convenience.

In Part II of the Bill, Clause 29 is designed to deal with the situation created by the recent decision of the Railway Rates Tribual, holding "flat" or "composite" rates to be illegal.

Notwithstanding anything in the Railways Act, 1921, this clause permits a railway company to make such charges for the carriage of the merchandise of any trader as may be agreed between the company and the trader, subject to the Railway Rates Tribunal. Any trader who considers that his business will be detrimentally affected may be heard in opposition to the application.

Another clause relieves the railway companies of the obligation to obtain the prior consent of the Tribunal before granting an exceptional rate which is les than 5 per cent. below the standard rate.

The existing Statutory Roads Advisory Committee will be abolished when the new Advisory Council is set up. The expenditure incurred in connection with the Council should not exceed £500 a year.

The Bill, as a whole, makes the position of the railways comparatively elastic, but it imposes a number of hard restrictions on road carriers. The entire body of the road transport industry is hence bound to oppose it tooth and nail.

Bank of England Policy.

This week's Bank of England return shows a complete reversal of the Bank's recent policy in regard to gold purchases. Bankers' deposits have fallen from £109, 559,000 to £88,663,000 which is accounted for mainly by a fall of £14,000,000 in Government securities. On the basis of the week's return, the gold bought, since the payment of War Debts in December last, of the total value of £59 millions has been virtually sterilised, and the volume of credit stands just where it was when the payment was made. The Bank's operations during the week naturally raises the question why the Bank should at all have built up its gold reserves with such vigour and industry, if it was only for the purpose of allowing the reserves to become sterilised. If the Bank is to be credited with consistency, the only conclusion to be drawn is that the present position is a purely temporary phenomenon due to transactions connected with the Exchange Equalisation Fund, and will soon pass away.

UNITED STATES OF AMERICA.

Impatience for Reform.

Owing to the material success of President Roosevelt in dealing with the banking crisis and the general awakening of public interest in measures calculated to reconstruct finance and pave the way for revival, there are signs of a growing impatience for the next stage of reform. The President, however, is naturally weighed with a sense of his responsibility. His advisers have been busy preparing schemes for every aspect of national economy and finance. And it is not too much to say that the plans are in an advanced stage. But Mr. Roosevelt would fain postpone his scheme of inflation, until after his plans for the restoration of confidence in internal banking are well on the way to success. Reports have it that he is planning for a nation-wide attack on unemployment. He is likely to propise the firmation of a Public Works Board to consider individual projects which, if approved, would be financed by Government bond issues, the service of which would be covered by the revenue derived from such projects. When such works are set afoot, the economic structure of the country would be more sensitive to stimulation by inflation. But it is doubtful whether Mr. Roosevelt could choose his own time for the inauguration of his inflationary plans. A strong Congressional group under the lead of Senator Thomas is planning to force inflationary measures through the Senate in order to advance commodity prices ; and it is not improbable that Mr. Roosevelt's hands would be forced, even before the arrival of the representatives of foreign nations, whom he has invited to Washington for a preliminary discussion of the problems of the World Economic Conference.

With the approach of the representatives of foreign governments the various sections of American economic opinion have begun to air their views about the attitude which America should take in the coming discussions. And taking them all in all, there is a distinct sign that American opinion has been considerably sobered by the course of events since the payment of war debts last December. For instance, there is a pretty general unanimity that America need no longer insist on the return of Great Britain or other counries to gold standard at an early date. Likewise, tariffs are not felt to be a matter on whcih the authorities should be obdurate. All that Amercian opinion would care for at the present stage is a general lowering of tariffs and the conclusion of various understandings with foreign nations as to restriction of output. In no commodity is such restriction so ardently wished for as in wheat. It would appear that Mr. Bennet's response to the American viewpoint is distinctly encouraging. And the hope is entertained in certain quarters that an understanding with Canada might be reached even before the close of the conversations with the foreign powers and might form a model for other cases.

Rehabilitation of Silver.

Needless to say, proposals for the rehabilitation of silver are peculiarly endearing to American opinion. Mr. C. Hull, the Secretary of State, stated that he had already discussed these questions with Sir Ronald Lindsay, the British Ambassador. Among the matters discussed were the increased use of the silver as money, the restriction of production, if necessary, even through the regulation of the output of the base metals, suspension of silver sales by the Government of India and the purchase of a given amount up to a stipulated price by the central banks of countries on the gold standard of are about to return to it.

As for other questions, the letter sent by the United States Chamber of Commerce to Mr. Hull, the Secretary of State, may be said to be fairly representative of American opinion. The Chamber suggests that a postponement of the payment of intergovernmental debts should be authorised on a temporary basis where the debtors can demonstrate their inability to pay. The Congress, it is urged, should authorise the inauguration of agreements to promote the best interests of the nation including entry for the United States into the debtor country. The principle of reasonable protection should be adhered to; but tariff rates should be adjusted with such expertness that they would tend to remove them from the plane of purely political considerations.

Debtors' Guarantee Corporation.

The reconstruction of the banking system, however, continues to be the prime preoccupation of the whole nation. The most notable of contributions towards this end is a new bank bill which has been proposed by Senator Carter Glass. The aim of the proposed legislation is to guarantee certain bank deposits. Such a guarantee would be made possible by the formation of a Debtors Guarantee Corporation which, as in most other schemes in America, would be permitted to borrow up to $1,500 million over and above the $500 million which has to be subscribed by the Treasury, the Reserve Banks and other banks whose deposits are guaranteed. The funds are to be used for meeting the liability of any subscribing bank to its depositors. It is not clear whether all member banks will be permitted to join or whether membership of this scheme is confined to national banks. In any case, a scheme like the one under contemplation would serve to eliminate the danger of large withdrawals and to hasten the return of currency.

No Reduction in Bank Rate.

The progressive decline in money rates culminating in the reduction of call money to 1 per cent. has encouraged hopes of a further reduction of ½ per cent. in the Federal Reserve Bank rate. Such a reduction would have the effect of spreading all over the country

Air Mail Week.

the benefits of lower money rates. Money conditions in New York and the bic centres have been easy, but the the interior regions are still suffering not only from high rates but even from a positive paucity of credits. It is reported that certain businesses have been altogether unable to get any advances and some of them have been obliged even to abandon business. In such a condition, a lower bankrate might perhaps, stimulate the flow of funds to the interior. But the directors of the New York Federal Reserve Bank decided not to make a further cut on the bank rate.

Will the Treasury Refund?

In the same state of indecisive hopefulness is the question of refunding operations. Financial circles everywhere discuss the possibility of the Treasury's refunding operations on a vast scale in the near future. According to certain sections, the Government contemplates making a 6,000 million dollar issue to take up all long-term bonds outstanding at present and to refund them at a 3 per cent. rate. One can hardly be sure that conditions are still ripe for a transference of these bonds, which are held largely by the banks to the rank and file of investors in the country. Whatever the attitude of the average investor and the conditions in the new capital market, the frequent talk of numerous schemes involving large capital issues is not conducive to the success of refunding operations on a large scale. The probabilities are that the Treasury will devote its attention more to specific schemes of financing banks and business than of securing for itself a relief in interest or from temporary embarassments.

Business in Uncertain Mood.

Business psychology is still in an unformed and hazy state. While opinions are freely expressed at meetings of directors that better business is at hand, there has been little or no check to the general movement for cuts in salaries and wages. Commodity prices are showing an upward trend. The winter wheat crop is definitely below expectations and is likely to be only 75 per cent. of last year's crop and 59 per cent. of any normal year. The yield is estimated at 334 million bushels as compared with 462 million bushels a year ago and a quinquennial average of 589 million. The condition of rye is estimated at 72½ per cent. against 79 per cent. last year. Likewise, in industry some signs of improvement are noticeable. Freight car loadings for the week ending April 1 increased to 494,600 cars from 475,900 in the previous week. The increased automobile sales points to a probable rise in the output figures for April over those in the same month last year. Dealers' sales for March have amounted to 47,400 cars against 42,280 during February. Steel mill output has increased during the past week by 3 per cent. to 19½ per cent. of capacity. Perhaps the most heartening factor is the investigation of the Inter-States Commerce Commission into the possibility of effecting a general cut in rates. Whether or not a substantial reduction would be effected, it is now generally felt that the increase effected 15 months ago was a mistake and its rectification would of itself be a very helpful development.

THE BANK FOR INTERNATIONAL SETTLEMENTS.

With March 31 last, the Bank for International Settlements completed the 3rd year of its existence. Despite the numerous shocks to which international finance was subject during this period, the net profit of the Bank during the year stands at £15,200,000, which is more or less at the same level as in the previous years. But to the cessation of reparation payments the turnover of the bank reveals a contraction of 180 million swiss francs. The Articles of Association leave little scope for change in the utilisation of the profits. For it has been laid down that 5 per cent. of the profits shall be placed to reserve and 6 per cent. distributed on the paid-up capital, while of the remainder 20 per cent. would be allotted to dividend reserve and 50 per cent. to the general reserve. Any balance still remaining would be distributed among the Central Banks of the Creditor States and the French and German governments.

One change in the character of the bank's business is worthy of special note. Not only has the balance sheet total declined by 180 million francs, consequent on the cessation of reparations payments, but the Bank has made no exceptional foreign exchange profits during the past year. In 1931-32, a substantial profit was made on its short position in sterling. But later it was considered inadvisable to keep any open position in exchange. It may be inferred, therefore, that the profits for the year 1932-33 are, in large part, the result of the difference between the rates of interest allowed on deposit and the rates on loans. Judging from the developments at the end of the year, it would seem that the loans on liabilities of the banks would show a progressive decline. March showed a fall of 103 million francs and a further decline in the next month is possible. For the tendency of the central banks is to reclaim their deposits without, however, causing any inconvenience to the Bank. Every return of frozen assets furnishes an opportunity for such withdrawal; and during the recent period, the repayment of the Reichsbank credit has brought about a nearly corresponding decline in the loans and liabilities of the Bank for International Settlements. Incidentally, it may be mentioned that central banks generally show a tendency to liquidate their foreign exchange reserve with the result that the Bank of England is the only institution which still controls a large foreign exchange reserve on account of the Exchange Equalisation Fund. But the Bank for International Settlements has comparatively little of these balances; and it is urged that the mildly, but persistently, anti-British attitude of the International Bank is responsible for it.

In the last meeting of the Governors of the central banks held at the head quarters of the bank for International Settlements Dr. Schacht attracted the utmost attention. The new President of the Reichsbank is universally regarded as a more original and daring financier than Dr. Luther whom he has succeeded. The decision to repay foreign credits in gold necessarily means that the gold reserve of the Reichsbank would be reduced to a dangerously low level. In a statement made on the eve of the meeting, Dr. Schacht spoke of the necessity of international confidence in Germany's will to repay her obligations. The omission of any reference to capacity is regarded as very significant. What is more, a reduction of the rate of interest on Germany's advances has been mentioned as one of the demands that might possibly be made by Dr. Schacht. In spite of this apparent cause for uneasiness, the relations of the heads of central banks are reported to have been very cordial; and there was little fear that Dr. Schacht would precipitate any new and embarassing situation by certain measures for the initiation of which he has undoubtedly, the requisite knowledge and skill. The Bank for International Settlements renewed Austria's credit of 60 million shillings until July 16, Hungary's 20 million dollars until July 18th and Jugoslavia's 3 million dollars until July 28th.

CANADA.

Import of Japanese Shoes.

Canada is faced with a somewhat delicate situation in regard to the Ottawa Agreement. Perhaps the word "delicate" is not quite appropriate, considering that among the Empire countries Canada

Air Mail Week.

has been conspicuous for its lack of loyalty to the agreement concluded at one of its own capitals. It is well-known how certain customs schedules have been altered in order to deprive the British manufacturer of the advantages which he could legitimately claim under the terms of the Ottawa settlement, so that, while the letter of the Ottawa past has been adhered to no one can possibly contend that its spirit has been respected to. But, in present instance, Canada has less of her national interests involved. The problem that she has been called upon to face is due to the import of leather and canvas shoes manufactured at Singapore by concerns owned by Japanese. As the Ottawa Pact has, naturally enough, omitted to make any distinctions between British and foreign-owned concerns, so long as their base of operations is within the Empire, it may be said that the situation was not forsseen, much less provided for. At the same time, the industry which has been affected by such imports is not purely Canadian, as the shoe factories are largely owned by Americans. It remains to be seen whether in a case like this the authorities would take any prompt action. There is no love lost between Canada and Japan, or even for the matter of that, between Canada and America.

Canadian Shipping Act.

The revised Canadian Shipping Act, which is before the Dominion Parliament, will permit only vessels of Canadian registry to handle the grain from Canadian upper lakes ports and destined for shipments abroad from Canadian ports on the St. Lawrens River or the Atlantic sea-port. The intention of this legislation is unmistakable. Hitherto, a large part of Canada's trade in grain had been shipped from the United States ports on the lower lakes ; and Canada has been anxious all the while to reserve such transportation for Canadian vessels. The incentive to such restriction has been whetted, so to say, by the fact that the preferential tariff of the United Kingdom in respect of wheat is restricted to grain exported from Canadian ports. It suits Canada, therefore, to define coastal traffic as "the transportation by water, or land and water, of goods or passengers from one port of Canada to the same or another place in Canada, whether or not such transportation is direct or by a foreign port outside Canada and includes any part of such transportation." In giving legislative sanction to such definition the Dominion is following only the example of the United States. Formerly, proposals to the same effect were opposed by the grain exporting interests owing to the fear that higher rates might result from the elimination of United States vessels. But now any such fear of loss is counteracted by the anxiety to take advantage of the preferential tariff.

Perhaps, it is only fair to point out that the new legislation would be merely confirming recent developments. A notable change in routing in favour of Canadian ports would be visible, if the recent export movement of Canadian grain and flour is compared with that of a year ago. During February almost the entire volume of Canadian grain exported abroad was routed through Canadian ports. 167,953 barrels of flour were shipped to Great Britain and of this amont 161,158 barrels went through Canadian sea-ports and only the remaining 6,000 *via* United States seaports.

ORIENTAL GOVERNMENT SECURITY

LIFE ASSURANCE CO., LTD.

INCORPORATED IN INDIA 1874.

HEAD OFFICE : BOMBAY.

1931 RESULTS

New Business: 26,486 Policies assuring Rs. 535 Lakhs.
Net Interest Income : Rs. 57 Lakhs.
Total Premium Income : Rs. 187 Lakhs.
Claims Paid : 3,877 for Rs. 86 Lakhs
Loans to Policyholders : 11,130 for Rs. 44 Lakhs.
Funds Increased to nearly Rs. 11½ Crores.
Policies in Force : 1,90,713 assuring with Bonuses : Rs. 41 Crores.

All the operations involved in the above conducted at the low expenses ratio of 21·4% of the premium income.
The Magnitude of this Great Indian Company's operations can be Judged by these figures, as can also its

ECONOMICAL & EFFICIENT MANAGEMENT.

On its past record and its future prospects alike The ORIENTAL Claims the increasing support of all Patriotic Indians who desire to see an Indian Life Assurance Co. Numbered among the

GREAT INSURANCE INSTITUTIONS OF THE WORLD.

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

STATISTICAL INFORMATION

P. O. CASH CERTIFICATES.

During the month of March Rs. 1,19,65,000 approximately were realized by the sale of 5-Year Post Office Cash Certificates, as against Rs. 1,02,44,000 in March, 1932 and Rs. 1,28,51,000 in March, 1931.

MADRAS FOREIGN TRADE.

The total value of imports from foreign countries into the Madras Presidency during March, 1933, was Rs. 1,23,55,962 against Rs. 1,51,97,552 in the corresponding period last year showing a deficit of Rs. 28,41,590. The commodities that were responsible for the deficit were: Dyeing and tanning substances Rs. 2,87,609 (−Rs. 2,86,364); machinery and millwork Rs. 12,65,529 (−Rs. 4,22,415); fuel oils 836,144 gallons, Rs. 2,79,787 (−Rs. 1,851,509 gallons, −Rs. 1,80,319); kerosene oil 205 gallons, Rs. 211 (−252,750 gallons, −Rs. 2,15,957); sugar 23 Dutch Standard and above 5,245 tons, Rs. 5,56,430 (−8,325 tons, −Rs. 16,46,632); cottons raw 2 tons, Rs. 26 (−422 tons, −Rs. 1,50,403); piecegoods plain and bordered 3,118,639 yds., Rs. 5,05,434 (−157,436 yds., −Rs. 38,892); piecegoods white 2,048,973 yds., Rs. 5,05,695 (−429,428 yds., −Rs. 75,460); silk raw 54,190 lb., Rs. 1,80,259 (−43,291 lb., −Rs. 2,71,056); Art silk yarn 97,259 lb., Rs. 79,659 (−191,291 lb., −Rs. 3,11,647).

The total value of exports of Indian produce and manufactures from the Madras Presidency to foreign countries during March, 1933, was Rs. 2,26,47,004 against Rs. 2,00,24,829 in the corresponding period last year, showing an increase of Rs. 26,22,175. The commodities that contributed to the increase were: Coffee 48,439 cwt., Rs. 30,43,322 (+21,988 cwt., +Rs. 14,22,449); coir manufactured 3,605 tons, Rs. 7,16,438 (+2,290 tons, +Rs. 3,88,774); rice not in the husk 7,899 tons, Rs. 10,22,779 (+4,096 tons, +Rs. 4,71,919); castor seeds 5,070 tons, Rs. 6,40,870 (+3,520 tons, +Rs. 3,95,536); pepper 11,347 cwt., Rs. 3,24,476 (+9,512 cwt., +Rs. 24,87,83); tea black 4,590,325 lb., Rs. 38,38,573 (+2,869,740 lb., +Rs. 24,62,634); tobacco unmanufactured 1,389,507 lb., Rs. 5,65,343 (+901,276 lb., +Rs. 3,85,167); other articles Rs. 51,50,046 (+Rs. 4,05,362).

BURMA FOREIGN TRADE.

The following is a report on the principal variations in the foreign trade of the Province of Burma during the month of March, 1933, as compared with the corresponding period of 1932:—

The combined value of Imports and Exports was Rs. 316,.56 lakhs as against Rs. 448.48 lakhs, showing a decrease of Rs. 131.92 lakhs.

Imports.

The total value of merchandise decreased from Rs. 108.78 to Rs. 90.24 lakhs. The following were the principal articles which showed decreases, the value and the amount of decrease being noted against each:—

	Value. Rs. lakhs.	Decrease. Rs. lakhs.
Machinery and mill work, electric machinery, etc.—		
Motors	0.17	1.04
Machinery not being prime movers, etc.—		
Mining machinery ...	1.31	1.10
Oil crushing and refining machinery ...	0.41	1.15
Metals and Ores—		
Iron or steel, beams, channels, etc. ...	0.20	1.10
Oils—		
Mineral—Fuel Oils ...	0.03	2.42
Soap—		
Household and laundry, etc.	1.02	1.04
Textiles—		
Cotton piecegoods—Grey	0.74	1.07
,, ,, White	9.01	2.67
,, ,, Coloured	13.37	1.38

Exports.

The total value of Indian merchandise recorded during the month was Rs. 226.33 lakhs as against Rs. 339.71 lakhs, showing a decrease of Rs. 113.39 lakhs. The following articles accounted for the decrease, the value and the amount of decrease being noted against each:—

	Value. Rs. lakhs.	Decrease Rs. lakhs.
Grain, Pulse and Flour—		
Rice bran ...	5.40	6.63
Beans	0.63	3.05
Paddy (rice in the husk)	1.13	4.44
Rice not in the husk ...	146.67	116.27
Metals and Ores—		
Wolfram Ore ...	6.05	1.02

The following articles, however, showed increases, the value and the amount of increase being noted against each:—

	Value. Rs. lakhs.	Increase. Rs. lakhs.
Metals and Ores—		
Lead pig	14.73	1.84
Oil Cakes—		
Groundnut cake ...	3.54	2.23
Paraffin Wax ...	16.49	5.23
Textiles—		
Cotton, raw ...	9.38	6.66

Exports of "Copper—Others" (Matti) of a value of Rs. 2.23 lakhs were recorded during the month, whereas in the previous March no export was recorded under this head.

Extracts from Directors' Report:

Report—for the half-year ended 28th February, 1933.

The working for the half-year shows a gross profit of Rs. 69,409-5-8, to which has to be added the amount brought forward from last half-year Rs. 8,684-5-11, making a total of Rs. 78,093-11-7. After providing for:—Depreciation Rs. 16,267-15-4, Reserve for Taxation and Commission Rs. 13,894-4, special Depreciation on Development Rs. 18,000, total Rs. 48,162-3-4, there remains a balance of Rs. 29,931-8-3, which we recommend should be dealt with as follows:—In payment, on application, of a dividend at the rate of 5 per cent. per annum, free of Income-tax, Rs. 18,706, leaving to be carried forward Rs. 11,225-8-3. Raisings for the half-year compare with the two previous half-years as follows:—

Half-year ended 28th February, 1933, 14,654 tons.
,, ,, 31st August, 1932, 20,509 ,,
,, ,, 29th February, 1932, 16,807 ,,

A fresh contract for loco. coal has been made with the Assam-Bengal Railway for delivery up to 31st March, 1934.

Competition from Bengal still continues and in consequence the collieries are working to half capacity only.

To stimulate sales by delivering coal of a handy size for tea garden use and in a condition which will permit of storage for a considerable time a briquetting plant has been ordered after extensive experiments in England.

It is hoped that this will be producing by October next—Shaw Wallace & Co., Managing Agents.

Profit & Loss	...	58,020	Outstandings	...	7,262
			Cash	...	56,980
Total	...	2,74,130	Total	...	2,74,130

Extracts from Directors' Report:

Report—for the year ended 31st December, 1932.

The result of the season's working is a profit of Rs. 48,756-0-10, which on transfer to Profit and Loss Account shows a balance at credit of that Account of Rs. 63,020-1. Of this sum we have transferred Rs. 5,000 to the Reserve Fund.

We recommend that Dividends of 7 per cent. on the Preference Shares and 40 per cent. on the Ordinary Shares be declared at the Annual Meeting, leaving Rs. 14,520-1 to be carried forward.

Crop weighed out 1,909 maunds Tea as compared with 2,100 maunds estimated and 1,757 maunds in 1931.

The average selling price was 16 annas 4 pies, as against 19 annas 4 pies per lb. in the previous year.

The total area under cultivation remains at 505 acres.

Estimates for 1933 provide for a crop of 2,100 maunds at an outlay of Rs. 1,02,800 including Inland Freight and Sale Charges.—Duncan Brothers & Co., Ld., Managing Agents.

ALCOCK, ASHDOWN AND CO., LD.

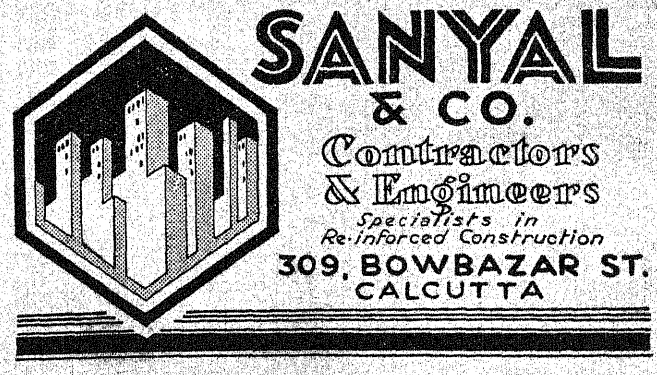
Extracts from Directors' Report:

Report to 31st December, 1932.

Conditions during the period covered by these Accounts remained extremely difficult and only a slight increase in the turnover as compared with the previous year was recorded. The Company again suffered from a scarcity of orders particularly in the Structural Department which worked throughout the year very much below full capacity. The Agency business has been considerably developed and is now a valuable side line apart from the Company's main activities.



As mentioned in the Directors' Report to the Shareholders last year, Carnac Works were closed down and all business was centralised at Defence Works. The Carnac lease expired in February, 1933, and in view of the improbability of being able to utilize or sub-let the property, your Directors decided not to exercise their option of renewal but to surrender the buildings and fixtures to the Port Trust in terms of the lease. The depreciated value of the buildings and fixtures has therefore been written off against General Reserve in the Accounts now submitted.

The Profit and Loss Account, after providing for Depreciation, shows a loss of Rs. 7,052-3-10 which with the balance of Rs. 1,46,348-14-1 brought forward from the last Account makes a balance at debit of Profit and Loss Account of Rs. 1,53,401-1-11. Your Directors propose to transfer Rs. 50,000 from the Reserve for Equalization of Dividend and to pay a dividend at the rate of 5 per cent. per annum free of Income Tax as follows:—Balance at debit of Profit and Loss Account Rs. 1,53,401-1-11; less transfer from Equalization of Dividend Reserve Rs. 50,000; leaving a balance Rs. 1,03,401-1-11; dividend at the rate of 5 per cent. per annum (free of Income Tax) Rs. 43,125; balance carried forward to next account Rs. 1,46,526-1-11.

NAMBURNADI TEA CO., LD.

Other Debts	...	48,227	Outstandings	...	3,756
			Cash & Invests.	...	1,76,455
			Profit & Loss	...	94,214
Total	...	12,78,227	Total	...	12,78,227

Extracts from Directors' Report:

Report for the year ended 31st December, 1932.

The result of the season's working shows a loss of Rs. 22,401-3-8, which has been transferred to Profit and Loss Account. After allowing for Depreciation and Debenture Interest, there remains a balance of Rs. 94,214-7-7 at debit of this account. We, therefore, regret that it is again necessary to pass the payment of a dividend on the Preference shares.

The crop harvester was 5,719 maunds 35 seers as compared with 5,750 maunds 15 seers in 1931 and an estimated crop of 6,000 maunds. Rainfall was insufficient for good growth with the result that the crop figure was under that estimated.

The crop was sold in Calcutta and London, and the average, which includes a small amount unsold in London, for which the price has been estimated, was 7 annas 2.75 pies per lb. as compared with 11 annas 4.73 pies per lb. in 1931. The prices realised are disappointing but are largely due to the extremely depressed state of the Tea Market, which, until the last few sales, was declining steadily throughout the selling season.

Planted Area—

Full Bearing	773 Acres.
Development and extension in the third year	17 ,,

The number of workers on the roli on 31st December, 1932, was 1,138 as compared with 785 in 1931.

It is estimated to produce a crop of 5,800 maunds of tea at a Revenue cost on the garden and in Calcutta of Rs. 2,19,036. These estimates are based on the proposals for Export and Crop Restriction recently adumbrated by the Indian Tea Association being carried into effect.

SARUGAON TEA CO., LD.

Extracts from Directors' Report:

Report—for season 1932.

Revenue Account shows a loss on the season of Rs. 19,962-3-10 which, after making sundry adjustments, leaves a balance at debit of Profit and Loss Account of Rs. 15,632 to be carried forward.

The season's crop weighed out at 3,606 maunds compared with 3,239 maunds in 1931. On a considerably lower market the average realization was annas 4-8 per lb. compared with annas 5-1 per lb. in the preceding season.

In spite of shortage of rain in the early part of the year, leaf was plentiful throughout the season, and the garden remained free from blights.

The planted area remains unaltered at 631.10 acres.

Estimates of crop and expenditure for the current season are delayed pending a decision with regard to restriction of crop.

Mr. Aikman has not signed the Report and Accounts owing to his absence from Calcutta.

BARDUAR TEA & TIMBER CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	3,00,000	Block	...	2,58,814

			Cash	...	150
			Profit & Loss	...	1,21,153
Total	...	4,01,103	Total	..	4,01,103

Extracts from Directors' Report:

Report—for season 1932.

After providing Rs. 8,750 for Debenture Interest, Revenue Account shows a loss of Rs. 9,337-3-3, and after making sundry adjustments, a balance of Rs. 1,21,153-5-4 remains at debit of Profit and Loss Account to be carried forward.

Crop for the season weighed out at 1,544 maunds compared with 1,456 maunds in the previous season, the average price realized on a considerably lower market this season being annas 4-8 per lb. compared with annas 5-9 per lb. in 1931.

Revenue from Timber shows a slight reduction compared with the previous year, demand being again poorer.

The area under tea remains at 218¾ acres. A considerable area has been infilled during the past season and in view of a satisfactory report from Mr. N. E. Ward on the progress made to date, it is proposed to continue this policy.

Estimates for season 1933 are being delayed pending a decision with regard to limitation of output.

DARJEELING TEA AND CHINCHONA ASSOCIATION, LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	3,75,900	Block	...	3,75,900
Reserves	...	2,75,000	Crop A/c.	...	18,328
Debts	...	26,377	Outlay	...	6,116
Profit & Loss	...	22,016	Outstandings	...	13,191
			Cash & Invests.	...	2,85,763
Total	...	6,99,293	Total	...	6,99,293

Extracts from Directors' Report:

Report—for the year ended 31st December, 1932.

Outturn for the season was 4,328 mds. 54 lb. as compared with an estimated crop of 4,500 mds. and 4,111 mds. 61 lb. manufactured in 1931.

A drought was again experienced during the early months of the season, but fortunately conditions during the latter months of the year were favourable.

Of the crop 2,367 mds. 61 lb. were shipped for sale on the London Market and the remainder was sold in Calcutta.

The average realised for the whole crop is equivalent to 9.228 annas per lb. as compared with 12.361 annas actually realised in 1931.

The usual standard of quality was well maintained, but unfortunately a dull market prevailed.

The following are comparative statistics of outturn and sales for the past three years:—

Year.			Outturn lb.	Sale Average. Annas per lb.
1930	...	...	382,352	16.256
1931	...	...	328,941	12.361
1932	...	...	346,294	9.228

The result of the season's working, after deducting Manager's and Assistants' commissions, is a profit of Rs. 17,669-8-6. This, with the adjustment of the accounts for the previous year, and after making the usual provision for Income-Tax, brings the amount at credit of Profit and Loss Account to Rs. 40,811-7 1, which we propose to allocate as follows:—To Ad-Interim Dividend of 5 per cent. (already paid) Rs. 18,795, to payment of Final Dividend of 5 per cent. (making in all 10 per cent. for the year) Rs. 18,795, to carry forward Rs. 3,221-7-1, total Rs. 40,811-7-1.

The General Reserve Fund remains at Rs. 2,50,000 and the Hail Insurance Fund at Rs. 25,000.

Estimates for the current season provide for a crop of 4,500 mds. at an expenditure of Rs. 1,97,464 excluding commission to Manager and Assistants.

This Company has, however, agreed to participate in the proposed Restriction Scheme, and the above estimate is therefore subject to modification in the event of restriction in crop being agreed to by the Industry.— Kilburn & Co., Managing Agents.

KYANG TEA SEED CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	2,00,000	Block	...	1,81,500

			Cash	...	51,951
			Profit & Loss	...	3,482
Total	...	2,37,908	Total	...	2,37,908

Extracts from Directors' Report:

Reporlt—for the year ended 31st December, 1932.

The result of the Season's working shows a loss of Rs. 1,207-14-4, which has been transferred to Profit and Loss Account, and there remains a balance at debit of this account, of Rs. 3,482-7-4.

The Company's holding comprises 363½ acres, the leases being held direct from the Government.

The total area under Tea is 71¾ acres.

52 maunds of first quality seed were harvested during the year, and of this quantity 27½ maunds were sold at an average price of Rs. 113 per maund.

Owing to the depressed condition of the Industry only a small quantity of seed was disposed of again this year.

Labour was adequate for requirements.

The garden has been kept in good cultivation throughout the year.

No new buildings were added during 1932, the existing ones were maintained in good order.—Shaw Wallace & Co., Managing Agents.

NEW SAMANBAGH TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	5,00,000	Block	...	4,67,001
Reserves	...	1,80,000	Crop A/c.	...	39,583
Debts	...	9,999	Stores	...	2,830
			Outstandings	...	1,241
			Cash	...	28,227
			Profit & Loss	...	1,51,117
Total	...	6,89,999	Total	...	6,89,999

Extracts from Directors' Report:

Report—for the year ended 31st December, 1932.

The result of the season's working is a profit of Rs. 4,745-15-10 which has been transferred to Profit and Loss Account. There remains a balance at debit of this account of Rs. 1,51,117-4-8. In the circumstances, we regret that it is again necessary to pass the payment of the dividend on the Preference Shares.

A record crop of 10,438 maunds 15 seers was harvested, as against an estimate of 8,000 maunds, and compared with 8,729 maunds 32½ seers made in 1931.

The teas were sold in Calcutta at a gross average price per lb. of 4 annas 3.29 pies, which compared with the price of 4 annas 11.21 pies obtained in 1931. The standard of manufacture was fully maintained, and the continued weakness of the market accounts for the further fall in price.

The area now under tea is as follows:—

New Samanbagh. Acres.	Mookam. Acres.	Pathuria. Acres.	Total. Acres.
311	202.3	487	1,000.3

The Estates were adequately cultivated during the year.

The total number of labourers on the books on the 31st December, 1932, was 1,704 against 1,699 on the same date in 1931.

These provide for a crop of 8,000 maunds at a total Revenue expenditure at the garden and in Calcutta of Rs. 2,00,900. They show a further substantial reduction and working costs are being closely scrutinized. These estimates are based on the proposals for Export and Crop Restriction recently adumberated by the Indian Tea Association being carried into effect.

RAJNAGAR TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	3,20,000	Block	...	3,45,802
Reserves	...	47,500	Crop A/c.	...	25,343
Debts	...	2,00,813	Stores	...	2,832
			Outstandings	...	1,132
			Cash	..	3,938
			Profit & Loss	...	1,89,266
Total	...	5,68,313	Total	...	5,68,313

Extracts from Directors' Report:

Report—for the year ended 31st December, 1932.

The Season's working shows a loss of Rs. 26,895-13-11. After providing for depreciation the balance at debit of Profit and Loss Account is Rs. 1,89,265 12-2.

The crop for the year weighed out at 4,495 maunds 20 seers, which compares with the estimate of 3,700 maunds and the 1931 outturn of 3,973 maunds.

Sales.—The teas were all sold in Calcutta at a gross average price of 4 annas 4.33 pies per lb. as compared with 4 annas 8.47 pies per lb. realised in 1931. The market continued to be weak throughout the year, and in spite of your teas having much improved, again resulted in poor prices being obtained for them.

The areas under tea are as follows:—

	Rajnagar.	Sonatollah.	Total.
5 years old and over ...	190.66	394.14	584.80
Planted in 1928, 29, 30 and 31 ...	...	57.15	57.15
Planted in 1932	...	6.25	6.25
	190.66	457.54	648.20

The reduced acreage, as compared with the figures quoted in the last report, is due to the enclosure within a wire fence of all the good tea, and to the exclusion from the planted area of the remaining unprofitable sections which have now been definitely abandoned.

An extension of 6.25 acres was put out during the year.

The Estate was maintained in good order, and received adequate cultivation during the year.

The total number of labourers on the roll on 31st December, 1932, was 736, which compares with 791 on the corresponding date last year.

The estimated crop for this season is 3,800 maunds at a total Revenue expenditure of Rs. 1,18,400.

The need for rigid economy has been borne in mind and the estimates, which are very reasonable, have been framed with this in view. These estimates are based on the proposals for Export and Crop Restriction recently adumbrated by the Indian Tea Association being carried into effect. Shaw Wallace & Co., Managing Agents.

KILLING VALLEY TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	2,00,000	Block	...	1,91,842
Debts	...	17,097	Crop A/c.	...	11,892
Profit & Loss	...	7,015	Outlay	...	13,939
			Outstandings	...	73
			Cash	...	6,966
Total	...	2,24,712	Total	...	2,24,712

Extracts from Directors' Report:

Report for the year ended 31st December, 1932, shows a loss on the year's working of Rs. 27,357-9-5, to which has to be added the debit balance brought forward from last year of Rs. 5,027-14-4, making a total debit balance of Rs. 32,385-7-9, the amount transferred from Reserve Account is Rs. 40,000, leaving an amount at credit of Profit and Loss Account of Rs. 7,614-8-3. The result of the season's working is again very disappointing for, although the crop harvested was 58 maunds more than last year and expenditure showed a reduction of Rs. 19,190-1-3, these advantageous factors were nullified by the low level to which the tea market dropped.

Outturn and Prices during the past three seasons were as follows:—

		As.	P.
1930	... 3,071 maunds at an average of ...	9	7.68
1931	... 2,655 ,, ,, ,, ...	7	2.76
1932	... 2,713 ,, ,, ,, ...	5	1.50

Weather on the whole was unfavourable; a severe drought was experienced and rainfall for the whole year was far short of requirements.

The total labour force at 31st December, 1932, was 750 or 1.29 per acre.

The estimate for 1933, provides for a crop of 2,930 maunds. The total outlay including Calcutta expenditure

on stores, is estimated at Rs. 89,792-5-7. A revised estimate will be called for if agreement is reached regarding the restriction of crop.

Negotiations in regard to the regulation of tea exports by producers in India, Ceylon and the Netherlands East Indies are still proceeding and it is to be hoped these will be brought to a satisfactory conclusion, otherwise a very pessimistic view must be taken of the Industry's future. The restriction of crop in India is also still under consideration. James Finlay & Co., Ld., Secretaries and Agents.

KHARDAH CO., LD.

Extracts from Directors' Report:

Report for the half-year ending 31st March, 1933. The Revenue Account, after deduction of Insurance, Commission to Staff, etc., shows a profit of Rs. 1,65,637-6-7, adding the amount carried forward from last half-year Rs. 5,123-12-1, amount transferred from Reserve Fund Account Rs. 2,40,000, equal to Rs. 2,45,123-12-1, the total is Rs. 4,10,761-2-8. From this sum there has to be deducted:—Provision for Income Tax and Super Tax Rs. 18,000, amount written off Furniture Rs. 2,229-8, equal to Rs. 20,229-8, leaving an available balance of Rs. 3,90,531-10-8, which we recommend should be dealt with as follows:—For payment of the Dividend for the half-year on the Preference Shares at the rate of 6 per cent. per annum, free of Income Tax Rs. 27,000, for payment of a Dividend for the half-year on the Ordinary Shares of Rs. 10 per share, free of Income Tax Rs. 3,60,000, to be carried forward Rs. 3,531-10-8, equal to Rs. 3,90,531-10-8. Anderson, Wright & Co., Managing Agents.

(*Continued from page 737*).

This feeling of helplessness is not confined to the sphere of cotton industry. The puzzle is even worse in the matter of rail-road competition. A conference of sixty men has been sitting here this week. All the delegates made set speeches, prepared before hearing the other side, and yet meant to be a reply to the opposite viewpoint! There is no spirit of accommodation. No feeling of common endeavour for a common national purpose.

The railway official cries "put on the motor transport the restrictions you have put on railways and we shall be satisfied." The road man answers: "Put your house in order. Make your railways cater more to the passenger and the tradesman, and you will have enough to live on and live for. The fault lies with you, and not with us." In between growls the provincial minister "Do what you like, but do not interfere in my sphere of road control and road development."

This rail-road conference is, indeed, a taste of what would happen when federal and provincial interests come to a clash. It is also a forerunner of the clash of interests between the interests of the State and the interests of the poor millions of India. The poor take to the motor transport because it is cheap, more convenient, not less comfortable and certainly quicker. He must not be deprived of that boon. And yet he, as taxpayer, is committed to preserve the solvency of the railways at the risk of his own.

The same dilemma here, as over the cotton question. Bureaucrats are neither prepared for, nor are they competent to overhaul the railways and make them less costly and more efficient. Control of road transport is neither feasible, nor in the best interests of the poor. What then is the remedy?

I have never known the Olympia so bankrupt as to-day.

BUNDI PORTLAND CEMENT, LD.

Synopsis of Balance Sheet:

		Cash & Deposits ...	2,08,572
Total ...	60,78,385	Total ...	60,78,385

Extracts from Directors' Report:

Report for the year ended 31st December, 1932. From the Accounts it will be seen that after setting aside Rs. 3,96,290-7-9 for depreciation the net profit for the year amounts to Rs. 6,28,508-15-10. Out of this profit the Directors have set aside Rs. 25,000 in writing down the expenditure on Purchase of Rights and Goodwill and have placed Rs. 85,000 to Reserve Fund, of which latter amount Rs. 60,000 has been appropriated for the purpose of writing down obsolete Rolling Stock. This leaves a balance of Rs. 5,18,508-15-10, which together with Rs. 11,443-13-6 brought forward from last year's accounts renders a sum of Rs. 5,29,952-14-4 available for distribution out of which the Directors declared an ad-interim Dividend of 10 per cent., free of Income Tax, absorbing Rs. 2,00,000 and they propose that the balance of Rs. 3,29,952-13-4 be applied as follows:—Dividend for the half-year ended 31st December, 1932, at the rate of 15 per cent. per annum (making 12½ per cent. for the year) payable free of Income Tax Rs. 3,00,000, balance to be carried forward Rs. 29,952-13-4, total Rs. 3,29,952-13-4.

Despatches of cement during 1932, showed an increase of about 4 per cent. as compared with 1931.

Important Capital Works completed during the year were the installation of the Electric Excavator in the Quarry and the erection of 10 new houses for the Indian Staff.

The renewal of the agreement with the Cement Marketing Co. of India, Ld., was concluded for a period of 7 years as from the 1st of April, 1933, and the Directors consider the terms of this agreement to be satisfactory.

Following an offer to subscribe to the Capital of the Coimbatore Cement Co., Ld., the Board decided that it would be advisable to apply for 5,269 shares of the nominal value of Rs. 100 each and these have been duly allotted to the Company. Killick, Nixon & Co., Agents.

(*Continued from page 711*)

million of debt redemption are taken into account, the real deficit would be only 785 million. It is pointed out that the present budget deficit is due to the increase in expenditure in the years 1929 to 1932 and that if the economic crisis had been sufficiently foreseen by former governments such an increase would have been wisely avoided. The Herriot Government however has brought down the deficit from 14 to 5 milliards. The Chamber has not shown anything like the same enthusiasm for reduction of deficit as the Government has. While the Government asked for 1,627 of fresh resources, the committee have furnished only 828 millions. Likewise, the reduction of economies proposed by the Government was 700 million while the Chamber has reduced it to 184 millions.

The terms of issue of the recent loan has had an adverse effect on money rates and this is causing some unpleasantness in financial circles. As the Finance Minister has made it clear that the Treasury would have to borrow another 10,000 million before the end of the year the rate at which the Government would secure their requirements is exercising the minds of the market. The average rate of interest offered in new bond issues during March was 5.60 per cent. against 5.50 per cent. in February, 5.90 in January, 5.60 per cent. in December and an average of 5.20 per cent. in 1932. The improvement in the general economic situation is being continued though only slightly. The general index of production in 9 principal industries is 103 as compared with 100 in the previous month and 100 in February 1932. Iron and steel output declined but motor cars are up and only in the case of buildings is there a serious drop.

THE HIMALAYA ASSURANCE
COMPANY, LIMITED.
INCORPORATED IN BENGAL IN 1919

LATEST TESTIMONIAL

"I am highly thankful to the Company for the prompt disposal of my claim within a very short time, which I did hardly expect, and for this I offer my sincere thanks.

I have been highly pleased with the dealings of the Company, and it being a purely Indian concern deserves encouragement by the people of the land."

WORLD OF INDIAN FINANCE

Thursday, May 4.

"Money has been as tight as H—l"—said a banker in answer to our enquiry about credit conditions in the current week. We have heard that delectable place described as extremely warm; but rarely have we come across the report about its being tight. Possibly, thanks to the inrush of Kreugers and Hatrys and an increasing number of like men, it is quite conceivable that that part of the world has now become over-populated. In any case, our friend's description of the current week in the money market is extremely correct and piquant. We had already pointed out, in these columns, that there was increasing activity in giltedge; that Calcutta was figuring as prominently in this regard as Bombay; that besides the professional operators, a lot of amateurs such as senior assistants in offices were dabbling in the market; that in view of the livelier activity in government securities, banks had to extend increasing accommodation on giltedge; that even apart from this, bankers themselves were tending to transfer their affections and activities from Treasury Bills to giltedge; and that due to these two factors, a considerable shrinkage had taken place in the available total of surplus resources in banking circles. This was the position on the eve of the New Loan. Friday last, cash applications for the Loan resulted in an unduly heavy drain on the depleted resources of banks. The total of cash applications came to Rs. 10.2 crores, of which the Imperial Bank would appear to have taken Rs. 4 crores. The net drain from banking circles should, therefore, be in the neighbourhood of Rs. 6 crores. At the same time, the Government did not buy any sterling on the last week's auction day. There was, therefore, no inflow of funds on this account into the market. It is true that the releases from Treasury Bills Maturities were quite considerable. But all factors taken together, such drain as was caused by the cash section of the loan was calculated to have a direct effect on a market working on a more slender basis of spare cash. Stringency of this kind is nothing unusual immediately after the flotation of a cash loan.

It is, however, necessary to examine how long this pressure will last. After the cash loan of last January, there was an early relaxation in monetary stringency. The 4 per cent. 1943 loan issued at that time, rose to a swift and substantial premium. This was responsible for the accentuation of an optimistic view as regards giltedge prospects. While such optimism prevailed, investors outside the money market proper were induced to take substantial interest in the way of purchases of government securities. There was, thus, a brisk exchange of scrips from bankers and giltedge operators for money from non-market circles. This was responsible for a rapid easing off in the congestion caused by cash applications in respect of the 1943 loan. We are afraid that, on the present occasion, no such developments can take place. The New Loan, namely, $3\frac{1}{2}$ per cent. 1947-50, was quoting at a premium on the eve of the opening of the list. The list was closed within a few minutes. The market came to know an hour or two later that all cash applications would receive full allotment. The anticipation in market circles, however, was that there would be only *pro-rata* allotment on the basis of 50 per cent. or even lower. On this anticipation, a good many applicants had tendered for more than their requirements. When it was known that they would all receive full allotment, there was, naturally, a movement for the sale of such excess stocks as had been received by applicants in this category. These sales brought down the price of the New Loan. At the same time, a general feeling of depression was created in the giltedge market. There was a setback in most other leading scrips. The earlier liveliness yielded place to extreme quietude. While there were keen buyers on the eve of the Loan, there were panicky sellers after the Loan. The premium on the New Loan melted into thin air. Actually, transactions at a discount of 2 annas and 3 annas were reported. There were, at this time, also apprehensions as regards the Bombay settlement day which came on May 2. It will be remembered that as much as Rs. $1\frac{1}{2}$ crores of securities had been *budleed* from the settlement of April 20 to May 2. Would the market be able to stand up to the taking of delivery of so large a quantity of scrips? Fears regarding the technical position of the Bombay market were another factor in the setback in giltedge that was manifest as from last Saturday.

This settlement passed off smoothly. Despite the loan sinking to a discount, the conversion section

of the loan was also closed on Tuesday. These two factors are calculated to have a steady effect on giltedge prices. But the nervousness created by the severe landslide following the completion of the cash loan continues to reign supreme. With the present temper of operators, it will be some time before settled conditions begin to prevail. Till such a healthy atmosphere is created, the general outlook would continue to be bearish. So long as the outlook of pessimism of this kind prevails, investors are not likely to be drawn into the market. The money market will, therefore, have to carry its present load of loans on securities till the giltedge situation clears up. Looking at the monetary world mainly from the standpoint of the repercussions that have been caused by the cash loan, we do not see how there can be any early relaxation.

In this connection, however, there is an important factor to which reference should be made. On May 15, the Government will be returning Rs. 4.18 crores to the market on account of the redemption of 5 per cent. 1929-47 loan. Thereafter, there would be repayment in respect of 6 per cent. 1933-36 bonds. 5 per cent. 1933 bonds will come next for redemption. All these funds will flow into the market in the next five months. Of this, Rs. 4.18 crores is due in ten day's time. The funds thus released are sure to find their way back into some type of giltedge security or other. A portion of this might be in the hands of banks, who had purchased them up as an alternative to Treasury Bills. But even after making allowance for this, there should be anything like Rs. 2½ crores to Rs. 3 crores which belongs to persons who are used to put out their funds in giltedge and who will again be driven to find some form of government security. Our insurance companies have now reached a size when their aggregate total of monthly investments is anything like Rs. 30 lakhs. When the investment pressure in this regard makes itself felt, the giltedge situation is bound to show a decided improvement. At the end of the third or fourth week of this month, we do look forward to a considerable rectification of the unhealthy position in giltedge. Another hopeful factor is that while the premium paid for *budlee* of securities on the settlement of April 20, was one anna to one and a half anna per cent., the premium on May 2, was only half an anna. This means that there has been appreciable improvement in the technical position. In the immediate future, we look forward to a continuance of the present listlessness and drooping tendency. The market might well regain heart in the latter part of this month. Unfortunately, India sterling stocks took a turn for the worse yesterday. There was a drop of nearly one per cent. in the price of 3½ per cent. India sterling paper. It is to be hoped that advices from London would be more encouraging over the next few days.

The Imperial Bank's balance sheet for the week ended April 28, shows the effects of the cash loan. Public Deposits have increased by Rs. 5.54 crores. At the same time, the ways and means advance of Rs. 2 crores, which figured in the accounts of April 21, has been repaid. The real increase in Public Deposits is, therefore, Rs. 7½ crores. The balance of Rs. 2½ crores has, presumably, been used up in the excess of Treasury Bills Maturities over renewals. The Bank's holding of government securities has risen by Rs. 3.74 crores. It may be inferred that the Bank should have taken up the New Loan for an amount approximating Rs. 4 crores. Loans and Cash Credits are higher by Rs. 2.13 crores. There should have been heavy borrowings on account of the cash loan. Cash has increased by Rs. 2.39 crores to Rs. 24.71 crores.

In the exchange market, there has been manifest a firming tendency. The main strength of the rupee-rate is due to monetary stringency. There have also been a few export bills appearing on the market. On the weekly tender day, applications for £7.63 million were received at 1s. 6 1/16d., and allotted approximately 13 per cent.

The closing rates are: 1s. 6 1/16d., and 1s. 6 1/32d., combined for May T.T. ; 1s. 6 1/32d., June-July T.T. ; 1s. 6d., August-October T.T. ; and 1s. 5 31/32d., November-December T.T.

Bombay has been more steady where 1s. 6 1/16d., has been freely available. This is, undoubtedly, due to satisfactory gold shipments.

Bills may be quoted: 1s. 6 1/8d., up to August ; and 1s. 6 3/32d., September to December.

Money has been in good demand, with lenders scarce. Interbank call money was done up to 3½ per cent. ; the rate at the close was 2½ per cent. "Union" rate for interbank, three days and seven days notice money continues at ¾ per cent. One-month, twomonth and threemonth deposits are 1¼ per cent. all through.

FINANCE ABROAD.

THE GOLD CLAUSE.

Nmberless questions have been discussed as arising from the abandonment of gold by America, some practical, some theoretical, some referring to the longperiod effects, others of short-term range. All of which are, no doubt, important to trade and industry. But their importance is nothing compared to that of the gold clause and its effect upon the dollar bonds. It is not perhaps as wellknown in India as abroad that most bonds issued in the United States contain a clause to the effect that "principal and interest is payable in gold coin of the United States of the present standard of weight and fineness." Such a clause would obviously be of no practical importance so long as the dollar was convertible at par into gold. With a depreciation of about 11 per cent. in the gold value of the dollar, the question naturally arises whether the payment in respect of bonds contained in the said clause should be made in paper dollars or in gold dollars. Possibly, the position would be simpler, if such gold clause occurs only in the case of foreign loans and not in indebtedness as between one American national and another. But in America, domestic and foreign bonds alike have the same clause. Apart from the dollar bonds held in Great Britain there is also a number of loans issued in terms of sterling which grant their holders the option of receiving payment in gold dollars.

During Air Mail week, the London branches and representatives of American banks were pestered with enquiries as to whether a premium would be paid on the paper dollars corresponding to the depreciation in terms of gold. As may be expected, no answer was vouchsafed. When, however, the time came for British holders of dollar bonds to instruct their agents in this regard, they naturally asked them to take payment in paper dollars, at the same time reserving the right to claim premium in pursuance of the gold clause. The American agents are now reported to have told them that such instructions cannot be entertained. At home, the American Government have paid the interest payments due on May 1 in paper dollars, irrespective of whether the bonds contained a stipulation for payment equivalent to gold. Advices from the United States, according to a special cable, appearing in the *Statesman* of Thursday last, show that holders of old coupons were given no other option except to take payment in paper dollars.

So far as the obligations of the American Government to their own nationals are concerned, there can be no doubt that to honour the so-called gold clause would defeat the very purpose of the abandonment of the gold standard. If, in a country like America, as she is to-day, debtors are to be denied the relief that may be expected from the devaluation of the currency, the effect might even amount to an increase of their own burden of debt. The social injustice resulting from arbitrary changes in the value of the currency are obvious. But to interfere with the incidence of such injustice by respecting the gold clause would be even more indefensible. Thus there can be no doubt that on grounds of general policy the American Government should disregard the gold clause altogether at least so far as their obligations to their own nationals are concerned. Legally, the position would seem to be even more sound. For, except in the case of a contract for tender of gold bullion, there can be no stipulation for payment in other than the legal tender of the realm. So long as the gold was convertible, it would be legal to insist on payment in gold. But once gold ceases to be so convertible, all obligations must be deemed to be duly discharged on presentation of legal tender. Such, in fact, was the judgment of Justice Farwell in an appeal against the Belgium Electrical Company which issued 5½ per cent. gold bonds with interest to be paid in sterling in gold coin in the United Kingdom or equal to a standard weight and fineness existing on September 1, 1928.

In regard to foreign obligations, however, it would be difficult to suggest that the position is substantially the same. But internationally, there is the precedent of France having successfully recovered the claims of French nationals in gold francs, while insisting at the same time that the obligations of her government to its bond holders would be repaid only in depreciated paper francs. If international conscience has been sufficiently awakened since, America would feel it necessary at least to follow a more consistent policy. It has been already pointed out that to recognise the gold clause in respect of the claims of its own nationals would be opposed to the very purpose for which the present devaluation has been brought about. If, therefore, the American Government were to be consistent they would have to grant a similar relief to foreign countries also. Germany, at any rate, it would seem is counting on being able to meet her dollar obligations at a smaller cost than that at which they were originally incurred.

As for the war debt payments, clause 3 of the British debt agreement states:

"The Bonds" (that is, the British Government Bonds delivered in respect of the debt) "shall be payable as to both principal and interest in United States gold coin of the present standard of weight and fineness, or its equivalent in gold bullion, or, at

BANKING:

It is sometimes said that, in speaking of simple transactions, Bank officials are prone to use terms which, far from being enlightening, are calculated to make confusion worse confounded in the ears of the customer seeking an explanation why he should do this or not do that. Branch Managers of Lloyds Bank are always willing to explain to customers and others the "Why and the wherefore" they should do a thing one way in preference to another.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

COMMUNIQUES AND RETURNS.

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Tuesday, May 2. The total amount offered was Rs. 1,16,25,000. Tenders at Rs. 99-11-3 and above were accepted in full. The total amount accepted was Rs. 1,16,25,000, the average rate of accepted tenders being Re. 1-3 per annum.

Tenders for Rs. 1 crore of three months Treasury Bills will be received on Tuesday, May 9. Successful tenderers should make payment on Friday, May 12. Other conditions are as usual.

STERLING TENDERS.

The Controller of the Currency notifies that on Wednesday, May 3, tenders to the amount of £7,630,000 at 1s. 6 1/16d. were received and allotted approximately 13 per cent. Lower tenders were rejected.

On Wednesday, May 10, £1,000,000 will be offered for tender on the same conditions as previously announced.

THE GOLD STANDARD RESERVE.

The balance of the Gold Standard Reserve on the 31st March, 1933, amounted to £40,000,000 and was held in the following form:—

	£
1. Cash at short notice at the Bank of England	897
2. British Treasury Bills	16,251,612
3. Other British and Dominion Government Securities	9,969,157
4. Gold—	
In England	2,152,334
In India	11,626,000

TATA STEEL

Is Manufactured up to any standard specification in India by Indian Labour.

All our B.S. tested steel is GUARANTEED and CERTIFIED by the Government Metallurgical Inspector to be strictly in accordance with the BRITISH STANDARD SPECIFICATIONS. INSIST ON having our Test Certificate when ordering B.S. Tested Steel.

TATA WORKS

MANUFACTURE:

Pig Iron, Blooms Billets. Rails, Fishplates, Tie Bars, Sleepers, Joists, Angles, Channels, Tees, Rounds, Squares, Flats Octagons, Plates, Black Sheets, Galvanised Plain and Corrugated Sheets, Agricultural Implements and Hardware Tools.

Agents & Stockyards throughout India:

THE TATA IRON & STEEL CO., LTD.

Sales Office: 100, CLIVE STREET, CALCUTTA.

Telegrams:—"IRONCO

CALCUTTA SHARE MARKET.

Jute—This section was fairly strong during the period under review, although the upward movement which was so prominent last week was arrested. Howrahs which touched Rs. 49-4 opened at Rs. 47-10 on Monday and Kamarhattys at Rs. 466; while hessians were standing at Rs. 9-6-3 and raw jute at Rs. 30-11. Shipments during the month of April have been very satisfactory and is reported to be about Rs. 9¼ crores. This will have the effect of knocking off stocks by about 1 crore yard. The consuming centres, especially North America, were very much interested and mills are reported to have done large forward business. All offers which were made by shippers were readily accepted and this proved a bull point to all local speculators. Hessians improved to Rs. 9-10 but a corresponding rise in Howrahs was not noticeable because all speculators were bear and they exerted their influence to depress prices. The improved demand from North America is largely attributable to inflationary measures adopted to put up commodity prices. Albions were placed at Rs. 257, Alliance Rs. 270, Anglo-Indias changed hands in large parcels at Rs. 342, Aucklands Rs. 195, Ballys Rs. 142, Barnagores Rs. 144, and later at Rs. 139, Belvederes Rs. 360, Budge Budge Rs. 355 and later at Rs. 350, Caledonians Rs. 440, Dalhousies on rumours of Rs. 7-8 dividend changed hands at Rs. 375, Deltas Rs. 38, Fortglosters Rs. 505, Kanknarrahs Rs. 432-8, Lansdownes Rs. 153, Orients Rs. 215, Standards Rs. 325 and Unions Rs. 400. It is rumoured that Bird group dividends are lower than last half-year. The closing tone of the market was fairly steady.

Cotton—There was improved enquiry in this section for Bengal Nagpore cotton which advanced to Rs. 23 while Dunbars were placed at Rs. 119. Kesorams were unchanged at Rs. 4, Dunbars (Pref.) were placed at Rs. 141, while there were buyers of Muir Mills (Ordy.) without many shares offering. New Victorias changed hands at Rs. 1-14, Elgin Mills (Pref.) were on offer at Rs. 111.

Coal—Lower prices attracted buyers in this section and a few turnovers resulted. Bengal coal improved from Rs. 214 to Rs. 220 and had buyers over. Burrakurs advanced to Rs. 10-12, Bokaro and Ramghur were placed at Rs. 16-4, Equitable Rs. 17 while Standards were placed at Rs. 24-8. At this price sellers appeared without finding many buyers. New Beerbhoom was wanted at Rs. 8-6 and Pench Valley were dealt at Rs. 29-8 ex-dividend. Amalgamated coal improved to Rs. 13-6 while a solitary deal took place in Ghusicks at Rs. 2-4 and in North Damuda at Rs. 3-2. Raneegunge came to business at Rs. 31-8 and South Karanpura at Rs. 2-4. Prices are likely to improve further on investment enquiry.

Miscellaneous—In the mining section Burma Corporation changed hands at Rs. 8-6 while Karanpura Developments were placed at Rs. 7-12. Indian Galvanising were wanted at Rs. 10-4 without many sellers while Indian Irons were better at Rs. 5-10. Indian Standard Wagons at Rs. 52-8. B. I. Corporation changed hands at As. 12 while Preference improved to Rs. 105. Titaghur Paper (Ordy.) and (Defd.) were wanted at Rs. 14-4 and Rs. 5-6 respectively. Among Electric concerns Benares were placed at Rs. 11-12 Cum. Div., Mirzapores at Rs. 5-8, Daccas at Rs. 14-4, Mozafferpores at Rs. 9-4, and Bengal Telephone at Rs. 15. Hooghly flours were wanted at Rs. 14-4, without many sellers. Associated Hotels were placed at Rs. 3-4, Dunlop Rubber (Pref.) at Rs. 102. Among sugar shares Cawnpore were placed at Rs. 37-8, Basti Rs. 247, Carew & Co., Rs. 17-4, New Savans Rs. 18-8, Samastipore Rs. 18-8, Ryams Rs. 50-8, Champarans Rs. 30-8, Rohtas 15 paid up, at As. 8 premium and Bolorampur at Rs. 11-8. Indian Wood Products had buyers at Rs. 28 while Tritons were quoting Rs. 166.

Banks and Railways—Imperial Banks Contributories and fully paids improved to Rs. 300 and Rs. 1,245 respectively. Central Banks were placed at Rs. 22-4. Among Railway shares Dehri-Rohtas Light Railway came to business at Rs. 8 while Hardwar-Dehra were placed at Rs. 102.

Government Securities and Preference Shares—After the spurt of the last week due to the announcement of the New Loan prices slipped back a little. 3½ per cent. Paper touched Rs. 87-12, but improved to Rs. 88. 4 per cent. 1960-70 remained unchanged round Rs. 99-8, 4½ per cent. bond 1934 were placed at Rs. 101-14 while 3½ per cent. New Loan which had gone up to As. 10 premium before the announcement slipped back to Rs. 96 other issues were fairly steady without much turnover. Among preference shares Jute mill Prefs. were very strong, Soorah Pref. came to business at Rs. 106, Hukumchands at Rs. 105, Birlas on declaration of dividend were wanted at Rs. 91-8, Bally Prefs. were wanted at Rs. 105 without many sellers. The Bank rate remained unchanged at 3½ per cent.

Tea—Some enquiry on investment account was noticeable in this section and a few deals resulted. Arcuttipores were placed at Rs. 10-12, Hassimaras at Rs. 29-13, Hattikhiras at Rs. 12-8, Jaybirparas at Rs. 15, Rutemas at Rs. 6, Delakhat Rs. 18-4 C.D., Patrokola at Rs. 573, Sapoi at Rs. 8-4, Betjan at Rs. 19-4, Teloijan at Rs. 8-12, Jutlibari at Rs. 12-4. It is expected that Tea shares will see higher levels before long.

RICE.

The market during the week under review has ruled steadier with more speculative interest.

The quotations in the Rangoon market were:—

Big Mills Specials ...	... Rs.	155 to 157-8
Small Mills ...	... ,,	170 to 172-8
Special Quality ...	... ,,	180 to 182-8
Mudone ...	... ,,	185 to 187-8
Paddy ...	... ,,	57 to 60-0

London.

During the Air Mail Week the market in rice has been week and forward positions were easier. There has been no change in spot rates but forward quotations show a falling off of about a penny per cwt. Stocks are estimated at 2,235 tons against 1,075 tons a year ago.

SHELLAC.

During the week under review the market has ruled steady but quiet without much business passing. Demand from consuming centres continues to remain poor, the strength in the market being mainly due to the steadier tone of other markets in U. S. A.

The quotations are:—

T. N.	...	... Rs.	19 0
S. T. I.	...	... ,,	19 8

JUTE AND JUTE GOODS.

Jute Raw.

In my last review I expressed an opinion that whilst the position of hessian was sound I did not feel the same amount of confidence regarding jute. This view has proved correct as will be seen from the following comparative prices. On Thursday last when the price of hessian went up to Rs. 9-7 the price of jute Futures was Rs. 31-10. At the time of writing the price of hessian is Rs. 9-6 and that of jute is Rs. 29-10. Whilst there has been a drop of only one anna in the price of hessian the price of jute has come down by two rupees.

A fair amount of business is reported to have been done for jute by Calcutta Shippers with foreign buyers, and the shippers have been in the market almost daily.

As a result of the demand from shippers and the pressure to liquidate by weak holders in the Futures market the difference between Ready Firsts and May Futures has come down to about annas eight per bale. This is considered a healthy feature, owing to the balers having purchased a considerable quantity of their sales in Futures.

The jute market does not look like developing any great strength pending the completion of deliveries in the Futures market. Business for October shipment has been done at Rs. 3 to Rs. 3-2 premium over May. It is expected that the balers who are the principal sellers in the Futures market will transfer most of their sales to October at this premium.

The prospects of the next crop do not give any encouragement in taking an optimistic view of the market. Though the reports received from the mofussil are conflicting it is believed here in trade circles that the total sowings this year will be at least two annas more than that of last year which means a crop, of more than 90 lacs of bales. The present consumption is estimated to be about 76 to 77 lacs of bales. A crop of about 15 lacs of bales in excess of world requirements cannot but exercise a depressing effect on the market. It is however rather early to talk about the actual size of the next crop because, firstly the sowings have yet to be completed and secondly, the out-turn will depend on weather conditions during the growth of the crop.

According to the figures published by Mr. Shewpratap Tantia the total arrivals of jute during the ten months ending 30th April, 1933 have been 73 lacs of bales as against an import of 59¾ lacs of bales in 1931-32 and 90½ lacs of bales in 1930-31. The exports during the ten months have been 28¾ lacs of bales, against 28¼ lacs, during the same period last season.

Towards the end of last year out export of jute lagged behind that of the previous season by more than three lacs of bales. During the first three months of this year not only has this defficiency been made up but as will be seen from the figures given above the exports now are slightly in excess of that of last year. Taking into consideration the business that has recently been done with foreign buyers and the prospects of further demand owing to the improved outlook regarding jute manufactures it is expected that the total exports this season may exceed that of last season by more than a lac and a half of bales.

It is difficult to form a definite opinion about the market for any considerable length of time. Conditions change almost from day to day. The most uncertain factor is the situation in America.

I however believe that once the pressure of deliveries on the Futures market is over the price of jute will show some improvement. I feel that pending the outcome of the world economic conference no serious setback in the price of jute is to be expected. The strength in the gunny market will prevent any such setback.

Jute Goods.

The price of jute manufactures has continued to be very steady. On Saturday last 40″×8″ oz touched Rs. 9-1 but on news of a further rise in commodity prices in America and report of good business having been done with America the market improved once more and on Monday the price improved to Rs. 9-8. After touching Rs. 9-10 there is a slightly quieter feeling at the time of writing.

North American buyers are still in the field and a fair amount of business is reported almost daily especially for add widths and weights. A very healthy feature of the market is that all odd sizes are at a premium over standard sizes.

The River Plate buyers are keeping out of the market. The last business done with that country was when the price of 11's was about Rs. 11-4. I estimate that the Plate has bought from India about half of its requirements. Though it is very difficult to form any correct idea several shippers believe that the shipments to Plate this year will be about 20 crore yds. With North taking more interest and Plate taking the same quantity as last year the position of hessian for the near future seems to be absolutely sound. There has been a substantial rise in the price of chief American commodities and if there is even a 10% improvement in the shipments to North America, there is bound to be a considerable reduction in our stocks which are not too big. The stock of hessian in Calcutta on the 1st of May was only seven crore 98 lacs yds. Even when hessian went up to Rs. 22 per 100 yds. there was a stock of about 5 crore yds. That in my opinion is the minimum below which it is impossible to reduce the stock. When the stock was about 5 crore yds. there used to be a good deal of scarcity of ready goods. America seems to be determined to improve its internal prices. The President has been armed with almost dictatorial powers. Some improvement in demand from that quarter seems to be sure.

The only draw-back for the present seems to be that the bazar dealers whose holding capacity has been very much impaired have during the recent rise bought a large quantity of goods from the jute mills for all deliveries. A slight falling off in demand may bring out the weak holders as sellers which may temporarily cause some setback. Barring this all the factors seem to be favourable for a further rise. I therefore believe that purchases in all weak markets will prove profitable.

BULLION

GOLD.

The market during the week under review had ruled very steady. On account of the appreciation of franc in terms of sterling to 84⅛ francs the sterling price of gold rose to £6-4-8 and dealings in the local market were carried up to a little over Rs. 31 per tola. Later however the dollar and sterling both recovered and franc was quoted at 86. By the same token sterling price of gold has fallen to £6-0-5 and the rupee price of gold has fallen to Rs. 30-7 per tola. The export of gold has once again shown an increase, the quantity of gold exported per S.S. Viceroy of India and Britannia amounting to Rs. 76 lakhs and Rs. 42 lakhs. Stocks in Bombay have been slightly reduced to 3 lakhs tolas daily offtake remaining more or less unchanged at 3,000 tolas.

London.

The gold reserve of the Bank of England against notes amounted to £186,800,000 on April 26, 1933 against £184,800,000 on April 19, showing an increase of £2 million during the week. Further influx of gold from April 27 to May 2, aggregate £122,000 since the payment of December 15 instalment of war debts to America the Bank of England has been accumulating gold reserves. This movement shows no sign of slackening. The return to gold standard by the countries that have gone off it will be one of the chief questions to be discussed in the ensuing World Economic Conference. It appears as though the Bank of England's accumulation of gold reserves is with the object of providing for the restoration of the gold standard, when the value of sterling is stabilised at a lower parity.

The price of gold per fine ounce during the week was as follows:

April 28	... ...	122s. 6d.
,, 29	... ...	122s. 9d.
May 1	... ...	123s. 9d.
,, 2	... ...	124s. 8d.
,, 3	... ...	120s. 5d.

London.

The gold reserves of the Bank of England against notes amounted to £178,510,972 on the 12th instant, showing an increase of £1,978,181 as compared with the previous Wednesday. The Bank purchased bar gold during the week to the tune of £5,452,923, this being the largest daily influx since December 21, 1929, when the Bank received £4,679,000 of gold from the United States of America. Large amounts of gold were available in the open market, £1,900,000 being offered on the 18th April; some of the purchases were for the Continent, but, as in the previous week, the largest purchases were for a destination undisclosed.

The following were the United Kingdom imports and exports of gold registered from mid-day on the 10th instant to mid-day on the 15th instant:—

Imports.	£	Exports.	£
Germany ...	391,581	Netherlands ...	7,300
Netherlands ...	261,000	France ...	183,643
British South Africa ...	1,131,619	Switzerland ...	59,567
Australia ...	1,068,121	Italy ...	4,850
British India ...	977,513	Other countries	4,950
British Malaya ...	70,817		
Other countries ...	19,119		
	3,919,770		260,310

The figures relating to the United Kingdom imports and exports of gold for the month of March last are given below; they show an excess of imports over exports of £19,713,376. For the first three months of the present year, imports of gold amounted to £44,816,139 and exports to £32,979,326.

	Imports. £	Exports. £
Germany	1,461,630	6,730
Netherlands	763,483	2,288,786
Belgium	5,318	377,560

Other countries	187,104	54,513
	24,254,017	4,540,641

SILVER.

There have been heavy fluctuations in the silver market during the week under review. London prices on American selling dropped from 20½d., to 19⅞d. Consequently the local market has dropped from near Rs. 60 to a little below Rs. 59. During the recent rise in silver in America China has been a persistent seller and it is reported that she has sold about 60 thousand bars to America. The speculators in U. S. A. are long bulls and need to be supported by some measures, definitely and clearly defined to keep up silver values, otherwise their liquidation will create a great weakness in the silver market. In the local market the bulls seem to be tired and not willing to carry long. The closing tone of the market was easy but uncertain.

London Air Mail Week.

The Easter holidays reduced the number of working days in the week to three. On the 13th April demand from America caused a rise of ⅜d., prices being fixed at 18d. for cash and 18 1/16d., for two months' delivery. On 18th April quotations were a little easier by 1/16d., but further demand from America on the 19th carried prices to 18⅝d. and 18 7/16d., for the respective deliveries. China and the Continent sold, but Indian bazar although inclined to buy at lower levels, have not been active in this market. Enquiry from America has again been a feature in the afternoon but on the 18th the strength of sterling although counteracted in a measure by an advance in the New York prices tended to restrict this demand. The firmness of the market would seem to depend largely on a continuance of American support, failing which prices would tend to ease.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 10th instant to mid-day on the 15th instant:—

Imports.	£	Exports.	£
Germany ...	21,224	U. S. A. ...	33,460
Netherlands ...	12,509	British India ...	5,000
British India ...	12,525	British Malaya ...	3,400
Australia ...	17,284	Canada ...	2,365
British South Africa	2,978	France ...	1,916
Other countries ...	87	Other countries ...	3,173
	66,607		49,314

TEA AND COFFEE

TEA.

There was no tea sale in Calcutta this week.

London.

At the London auctions, common varieties continued to be steady, while other kinds were irregular. On May 1, 30,200 packages of Indian tea were submitted for sale. The following were the highest prices fetched during the day's auction:

	Last Auction.	To-day's Auction.
Common pekoe per lb.	7¾d.	7½d.
,, broken pekoe per lb. ...	8d.	7½d.
,, orange ,, ,, ...	7⅞d.	8¼d.
,, broken orange pekoe per lb....	8d.	8d.
,, ,, ,, souchong ...	8d.	8d.

The following are the value prices:

Clean common pekoe per lb. ...	7⅞d.	7⅞d.
,, ,, broken pekoe per lb. ...	8¼d.	8¼d.
,, ,, orange ,, ,, ...	8⅛d.	8¼d.
,, ,, broken orange pekoe per lb.	8⅜d.	8¼d.
,, ,, broken pekoe souchong	8d.	8d.

Java Tea Sales.

At the London auctions on April 27, 13,600 packages of Java and other teas (including Sumatra) were submitted for sale. There was a good general demand for all descriptions at fully higher rates. Other sorts were fully firm. The following are the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day's auction per lb.
Common Pekoe	5⅜d.	5⅜d.
,, Broken Pekoe	5¼d.	5¼d.
,, Orange Pekoe	6¼d.	6¼d.
,, Broken Orange Pekoe ...	6¼d.	6d.
,, B. P. Souchong		5¾d.

The following are the value prices:—

Clean Common Pekoe	6d.	6d.
,, ,, Broken Pekoe ...	5⅞d.	5⅞d.
,, ,, Orange Pekoe ...	6⅛d.	6⅛d.
,, ,, B. O. Pekoe ...	6⅛d.	6¼d.
,, ,, B. P. Souchong		5¾d.

HUDSON RAILWAY MATERIAL

Robert Hudson (India) Ltd.

Managing Agents: **MARTIN & CO.**

12, MISSION ROW, CALCUTTA.

COTTON.

There has been a further rise in the cotton markets. Liverpool cotton has gone up from 5.30 to 5.73 New York from 7.50 to 8 and Broach April-May from Rs. 180 to Rs. 189.

During the previous week, due to settlement, poor demand and other similar reasons, Indian cotton did not fully respond to the rise that took place in New York. But, with a stronger undertone, want of short sales, and market not having fully discounted the inflations proposal the tone of the market is very steady.

Dealings in April-May, 1934 having been started and bulls going long at Rs. 210 the ready position has been steady for the same reason. In India, the trade demand has not shown any improvement, the buying being mainly confined to speculators. The sentiment and tone of the market is however fully steady.

The following are the latest prices available :—

	This week	Last week
New york Middling spot ...	8·25	7·60

Steel Framed Buildings: Rivetted Pipelines: Pressed Steel Tanks Etc.

Complete Building Contracts are Undertaken.

Braithwaites are also Agents for Sir William Arrol & Co.'s Power Cranes of Every Description.

Designs and Estimates Prepared for any Projects on Request.

SUGAR.

Although there has not been any change in the values of sugar when compared with the previous week, the undertone of the market has been decidedly easier. The daily offtake for imported sugar is declining day by day and the local demand is fully met by the Indian sugar. The Java sugar is now quoted below the import parity and fresh business therefore for this port is not resulting.

Exchange which was once favourable for imports is now again taking the adverse trend and business therefore is becoming more and more difficult.

There are complaints about the degree of whiteness and cleanliness of the sugar produced by some of the newly started mills in India supplying sugar to Bengal, but the defect is being gradually removed and demand is every day increasing for Indian sugar.

WHEAT.

During the week under review the Wheat market in Calcutta has ruled steady and values for May and September Beta have gone up by 2 to 3 annas per maund.

The decrease in the Indian wheat crop reported last week has given a support to the market, sellers having withdrawn and buyers are showing more interest. The up-country grain markets have recorded a small but decided advance and the rise is fully reflected in Wheat.

The actuals are however easy, the offtake of flour being rather poor.

The latest quotations are:—

Chicago (May) per Bushel ...		$0.71⅛
Liverpool:		
Rosafe		22s. 6d.
Baruso		22s.
Australian (South)		25s. 3d.
Calcutta:		
Cawnpore & Punjab Ready ...	Rs.	3 9 0
May Beta	,,	3 8 9
Indian crop in 1932-33 ...		9,120,000 tons.
Imports into India of foreign Wheat during week ending April 29		Nil.
Exports from India during week ending April 29		71 tons.

London.

During mail week a further rise has taken place in the international cereals market. The rise is due to the depreciation of the dollar the demand from the Continent having been poor. The visible supply of Wheat in Canada is estimated at 97 million bushels against 75 million bushels a year ago.

Other grains such as Barley, Oats, Maize are also steadier in sympathy with Wheat, the rates showing a net advance over the previous weeks.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

DOLLAR-STERLING-FRANC-RUPEE-GOLD-SILVER.

Over the past fortnight, there have been interesting fluctuations in exchange values of important currencies, in gold prices and prices of gold, in dollar prices, in sterling prices and in rupee prices. On the eve of the second abandonment of gold standard in the United States of America, sterling-dollar rate stood at 3.65; and sterling-franc rate at 86.8. The immediate effect of the divorce of the dollar from gold was a strengthening of sterling both in terms of dollars and francs. The London-New York cross rate shot up to 3.85 and the London-Paris rate to 89.25. But as from April 24, sterling started weakening, the dollar appreciating to 3.73 dollars to the pound on April 27, and the franc appreciating to 87.25 francs to the pound. April 28 saw a further change-over. The franc continued to improve; but the dollar began to give way. At the time of writing, sterling is quoting 3.89¼ in terms of dollars and 84.81 in terms of francs. That is, sterling has depreciated in terms of the franc, which is a gold currency, but appreciated in terms of the dollar which is a paper currency. The real depreciation of the dollar in terms of gold is, therefore, more than appears on the surface from the quotation of 3.89¼ dollars to the pound.

* * *

The strength of the franc is, in a sense, only apparent. A large British credit to France of £25 million to £30 million was being arranged only the other day; and the effect of this would be either repatriation of this balance by sales of sterling and purchases of francs by the French authorities or the utilisation of the balance for the buttressing of the franc against attack. In either case, the British loan to France is a factor calculated to firm up the franc. On the other hand, the influences affecting sterling in relation to the dollar are bullish in the sense that the deliberate aim of the American authorities is to secure for the U. S. A. exports as great an advantage as possible from a depreciated currency. The dollar will, therefore, continue to be weak (and, perhaps, become even weaker); and the franc, for some time to come, will remain strong and firm in terms of sterling.

* * *

If this is how we gauge the future trend of sterling-dollar rate and sterling-franc rate, it follows that the price of gold in London should show improvement—a like improvement should take place in the rupee price of gold—and the dollar price of gold should disclose even greater appreciation. On April 19 (that is, before the U. S. A. abandoned gold in the second instance), the price of gold in London was £6 per fine ounce; the price in India was Rs. 29-10 per tola of mint gold. On May 1, the price jumped up to £6-3-9 in London and to Rs. 31 in India. The price of gold in India and in London (which is the principal destination for our gold shipments) is, under present conditions, dependent on the sterling-franc rate. As we are bullish as regards the near future of this exchange, we believe that the rupee and sterling prices of gold should remain attractive enough to induce increasing exports of the metal from India. The future of the sterling-rupee exchange is, therefore, towards growing strength.

* * *

Silver, like other commodities, has advanced in price in America. From 32⅜ on April 19, the rate rose to 37¼ on April 24 and is now round-about 35½. The improvement in the dollar price of silver had a bullish effect both on the rupee and sterling prices of the white metal. From Rs. 56-13, the price advanced to Rs. 59-10 on April 25, and is now in the vicinity of Rs. 58-15. In London, the quotation advanced from 18⅜ to 20 7/16, to react to 19 7/16. There is, presumably, a boom in the dollar prices of commodities; and though, necessarily, there can be no corresponding rise in sterling prices and rupee prices, a generally bullish influence is manifest.

Cotton is worth study from this point of view. From 6.60, the price of cotton in America has steadily risen to 8.25—an increase of 25 per cent. In Bombay, Broach (April-May delivery) improved from 166 to 189—that is 13¼ per cent. Liverpool prices showed a rise from 5.31 to 5.73—that is, only 4 per cent. The Indian market has, evidently, responded more warmly to American prices than has Liverpool. Hessian advanced in New York from 3.40 to 4.10 (or 20 per cent.) and in Calcutta from 8-8 to 9-9 (or 12½ per cent.) The boom in America has, thus, had a favourable effect (though not to the full corresponding degree) on important commodity prices in India. It now seems certain that American authorities are fully committed to a policy of raising prices at any cost by any means whatsoever; and that while this is the supreme end, the exchange value of the dollar is a minor consideration. The market operators in the U. S. A. have taken this hint and acted on it with promptness and with daring. The result is a setback in the international value of the dollar but a rapid advance in the prices of commodities. Weaker dollar should affect adversely prices of commodities in India; but such bearish effect as this should have had is being over-powered by the bullish factors arising from the expanding boom in the American prices of commodities.

DEBACLE OF NEW LOAN.

Our first impression of the effects of full allotment to applications by cash to the cash section of 3½ per cent. 1947-50 loan has proved only too true. Writing within a few minutes of the announcement, we pointed out that the technical position of the market on the eve of the Loan was unsatisfactory in that operators were overbought; that the New Loan would further accentuate the position in this regard; that if the market was left to find, by itself, a way out of the complicated situation, it would result in a flood of selling orders; that prices, as a consequence, would react sharply; that this would be a tragical anticlimax to a loan which had evoked splendid response; and that after a loan in such fine performance, every effort should be made to consolidate the position in the giltedge market. Our hopes have been belied; and our worst fears have materialised. If the financial authorities had a real touch with the market and a correct appreciation of market psychology, they should have had no difficulty in realising that the emergence of a good premium on a loan before its issue would, certainly, result in applicants tendering over-greedily; that the general expectation was a pro-rata allotment on 40 per cent. to 50 per cent. basis; and that if allotment was to be in full, weak holders were bound to demoralise the market. Such an understanding of market psychology should have led the authorities to the receipt of larger amounts and smaller allotment to prefer the dramatic closing of the list in

half an hour. From the point of view of sensation, the announcement of oversubscription at the end of two hours would not have been less impressive than the news of the completion of the quota in half an hour. The histrionic side of the business was well-managed; but the strategic aspect of the Loan was a bungle. And strategy counts in the creation of a healthy sentiment in a market like giltedge.

* * *

If, initially, the tactical move was wrong, there were further moves possible for the rectification of the error. A facile remedy, that has proved to be of sovereign quality in earlier months, is purchase of securities from the market and the lending of support thereby. We believe that the Government did apply this remedy in time and without stint. But the landslide was so serious that it would have been necessary for the Treasury to buy far larger quantities of stock than it was prepared for. We would also concede that in this kind of procedure, there is a limit beyond which it is not worth while to go. And we believe that as against Government's timely gesture to the market, the latter was inclined to inundate them with a flood of sales. Having tried this remedy and found it ineffective, the authorities would appear to have withdrawn, in the feeling that nothing more could be, or was to be, done; and that it were best to leave the market to find its own level. We are not amongst those who would plead for speculators if they had overdone their tactics. But we do plead that in the peculiar conditions pertaining to the conversion programme, to the way in which the market has co-operated with the Government for its success, and to the need of retaining this co-operation for the next stage, special efforts were called for to ensure the saving of the market from an awkward crisis and to facilitate the consolidation of the notable gains so far achieved. We acknowledge gratefully that the Treasury did make special efforts by coming on the market as purchasers immediately on the detection of a setback. At the same time, it is our view that the Government should not have contented themselves that they had done all that they could. What they did, proved of no avail. Was there anything more to be done? Was there any other remedial measure that could be put into effect? If the Finance members and his lieutenants had put to themselves these questions, they would have certainly found adequate and satisfying answers. One such remedy, which should have been tried and which could have had a profound effect, is the lowering of the Imperial Bank rate last Thursday from 3½ per cent. to 3 per cent. or even 2½ per cent. This would have vastly bucked up the market, put heart and hope in the hearts of operators, and retrieved the situation. Why was not this course adopted? We, on our part, did make a representation to the authorities; and we strongly urged that the lowering of the bank rate would prove a decisive factor and would help the market to recover from the unexpected shock. Reduction in official money rates is an accepted principle in the technique of preparing the ground for a loan. In view of trade conditions, a 3½ per cent. bank rate is unjustified. The Imperial Bank has suffered such a serious shrinkage under the heads Loans, Cash credits and Bills that its giltedge portfolio has now bulged to the amazing total of Rs. 40 crores. The Government should have taken a strong attitude and brought pressure on the Bank authorities to bring down the Bank rate. From our knowledge of the Bank authorities, we know that they are ever, reluctant to the lowering of the official rate. This reluctance is due to an undue solicitude for their shareholders and shareholders only. The Bank should never forget that it has a duty to the Government and to the money

A Victorious Announcement!

CHRYSLER

PLYMOUTH

A SIX

The new Chrysler-Plymouth adds to its long list of outstanding automotive achievements by becoming a Six. Thus does Plymouth celebrate its victory as the outstanding motor car value of the year. New Beauty, New Power, New Speed, New Flexibility, are built into the greatest combination of performance and thrift ever offered. Here is a FLOATING POWER Six in the lowest priced field which is designed, engineered, and built for those who demand the best. See the new Chrysler-Plymouth Six.

FRENCH MOTOR CAR CO., LTD.

DELHI CALCUTTA LUCKNOW

market no less than to its shareholders. It was its business to help the Treasury achieve success in its loan operations . It was its special province to do all that is necessary to prevent disruption in any section of the money market. From all points of view, there was every reason why the Bank rate should have been brought down this mid-week and no justification for maintaining it unchanged. Even at this stage, we would strongly urge on the Finance Member and on the Managing Governor of the Imperial Bank to make an effective contribution to the clearing of the giltedge retuction, by causing a reduction in bank rate to be made next week as from 3½ per cent. to at least 3 per cent. To *Indian Finance,* which has been propagandising its optimistic views on the future of giltedge, the present debacle is a profound disappointment; and if the authorities believe that we have done our part worthily to help their programme, we trust that the suggestion, we make to-day, will receive most favourable consideration.

ORIENTAL LIFE.

For sheer splendour and impressiveness, the balance sheet and accounts of the Oriental stand supreme amongst joint stock concerns in India. Every manner of information is given with meticulous care; every rigid principle of scientific life insurance practice is scruplously observed; and to insurance statistics in India, the figures furnished by the Oriental make the most illuminating and valuable contribution. The Oriental has a distinguished record; but the aim and management has ever been to beat, each year, the records of the earlier years. At the same time, the Chairman of the Company, at the annual general meetings, has made it the practice to furnish a comprehensive review of insurance in India and of the Company's affairs and progress, in particular. In the vacancy caused by the death of Mr. S. E. Warden, who was a Director for 29 years and the Chairman for 17 years and during whose Chairmanship the Company witnessed a period of the most rapid expansion in its history, Sir Purshottamdas Thakurdas has been elected as Chairman. The Company has, truly, honoured itself by thus honouring Sir Purshottamdas ; for, in this country where the responsibility pertaining to a director is hardly appreciated, Sir Purshottamdas is a most illustrious example of what a model Director should be—keen, alert, versatile, strong yet sympathetic in his attitude towards the management, and helpful in every way. He is not the kind of Director who takes his fee and bothers no more about his work. From all that we have heard of him in regard to his contribution on some of the important directorates in India, he is a terror to bad management and a trusty guide to good management. Sir Purshottamdas becomes the Chairman in a year which is the last of the first 60 years in the Company's existence. It is also the last year of the current triennium and consequently the bonus year. We have every confidence that under his guidance and with his support, the management will be able to achieve, in the current year, results which will constitute a record in the history of the Company.

* * *

The year under review has been gratifying from every point of view. New business in 1932 at Rs. 5.94 crores is higher than in 1931 by Rs. 59½ lakhs. The Chairman points out that the improved results for the year were due to a rapidly increasing flow of new business in the latter part of the year and that this increased flow is still being maintained. This justifies the hope that the new business of the current year may come to surpass the record of the life assurance boom year of 1929 when the figure was Rs. 6.50 crores. The net premium income at Rs. 2.00 crores is in excess of that of 1931 by Rs. 13.63 lakhs. The net interest income at Rs. 60¼ lakhs is higher by Rs. 3½ lakhs. Mortality experience has been quite favourable as is shown by the following extract from the Chairman's speech :

> **"Claims by death at just over Rs. 39¾ lakhs show a decrease of Rs. 1½ lakhs as compared with the previous year's figure an indication of the continuation of the extremely satisfactory Mortality Experience of the Company. The Ratio of Actual Claims last year to Claims expected and provided for by the mortality basis adopted in the previous valuation was 51 per cent. as compared with 58 per cent. in the previous year".**

* * *

Claims by maturity came to Rs. 45.93 lakhs. After adjustment of all expenses, the balance of receipts over disbursements was Rs. 1.16 crores. The life fund has risen from Rs. 11.32 crores to Rs. 12.48 crores. The ratio of expense was 21.4 per cent. in 1932 as compared with 22.4 per cent. in 1931 and 22.8 per cent. in 1930. The position in regard to investments has shown, as is to be expected, most satisfactory improvement. As at December 31, 1931, the total depreciation in the book values of the holdings of government securities was Rs. 1.87 crores. On December 31, 1932, however, the market values of investments are higher than the book values by over Rs. 2.08 crores, without taking the investment reserve fund of Rs. 25 lakhs into account. It is remarkable that, within twelve months, an increase in the market values of giltedge holdings is disclosed to an amount which is nearly Rs. 4 crores. Sir Purshottamdas refers to the transfer of some portion of the investment in sterling securities into rupee securities.

* * *

In this connection, the Chairman said as follows :

> **"The gain on sale of securities shown at over Rs. 5½ lakhs is principally due to our taking advantage in the early part of last year of the unusual difference between the market rates of the Indian sterling and the Indian Rupee securities and by selling some of our holdings in the former and investing the proceeds in the latter on such good terms that the net interest yield obtained as a result of the transactions was not only maintained but actually improved".**

We give below the comparative holdings of sterling securities at 1932-end and at 1931-end.

	1932-end.	1931-end.
	£	£
3 per cent. stock	2,092,665	2,068,765
3½ per cent. stock	2,071,800	1,983,700
4½ per cent. stock	275,000	211,000
5 per cent. stock	44,600	166,700
6 per cent. stock	4,000	4,000
5 per cent. Calcutta Port Trust ...	48,600	40,600
5½ per cent. Calcutta Fort Trust ...	10,000	13,900
6 per cent. Calcutta Port Trust ...	29,000	nil.
5½ per cent. Karachi Port Trust ...	12,400	7,400
6 per cent. Karachi Port Trust ...	15,700	3,300
Total ...	4,603,865	4,499,365

It will, thus, be seen that, actually, there has been an increase in sterling securities from £4.5 million to £4.6 million. What must have taken place is that in the early part of the year, such transfer of sterling stock into rupee stock had been effected, followed by fresh investment in sterling stock in the later part. In any case, it is obvious that only a very small percentage of the total holdings in sterling scrips was converted into rupee scrips. Yet, the profit realised was no less than Rs. 5½ lakhs. If this operation had been done on a larger scale, the Oriental could have made a profit of anything like Rs. 1 crore. We cannot understand why this was not done. In days when the 3½ per cent. Rupee Paper was quoting 10 to 12 per cent. lower than corresponding sterling stock, this kind of operation was one which no investment official with a scientific understanding

of his task could have neglected. We are afraid that those in charge of the investment policy of the Oriental missed so golden an opportunity. The Oriental is staffed by experts on the management, actuarial and organisation side. It is time that they entrust the care of investments to an expert whose main function would be to take advantage of the differences in yields, manifest, from time to time, among the range of giltedge securities. No Indian insurance company has so far realised the need for real expertness in the handling of investments. A most conservative policy is still being pursued even by a go-ahead company like the Oriental. The time has arrived, in our view, when the Oriental should give a lead in this matter as it had given a lead in most other directions.

NATIONAL INSURANCE COMPANY.

The National Insurance Company has shown record progress in 1932. By every token of growth and by every canon of sound insurance, the position, as revealed in 1932 accounts, is most gratifying. New life proposals received during the year came to Rs. 1.97 crores as against Rs. 1.67 crores in 1931. Accepted New Business was Rs. 1.56 crores as compared with Rs. 1.32 crores. Claims on account of death at Rs. 5.87 lakhs were substantially less than in 1931 when they were Rs. 6.21 lakhs. Matured endowment assurances accounted for Rs. 6.91 lakhs against Rs. 6.71 lakhs. The total interest income on investments was Rs. 8.95 lakhs as compared with Rs. 7.51 lakhs. Premium income advanced from Rs. 33.27 lakhs to Rs. 36.77 lakhs. Expenses of management are higher by Rs. ¾ lakhs and are just about Rs. 10 lakhs. The increase in life fund in 1932 was Rs. 19.97 lakhs, which is fully Rs. 3¾ lakhs higher than in the previous year. Ratio of expense of management to premium income has gone down from 27.6 per cent. to 27.3 per cent. The life fund, including other reserve funds, amounted to Rs. 1.83 crores at the end of the year. The Company has, thus, reached a position in which it should, in the current year, exceed the Rs. 2 crores mark as regards life fund, nearly approach the Rs. 2 crores limit as regards new business, and leave far behind the limit of Rs. ½ crore as regards total income. The investments of the Company are mostly in first class Government and trustee securities. The depreciation fund provided for last year is no longer necessary. On the other hand, at current rates for giltedge, there should be a substantial appreciation under investmenets. The Company has done well in strengthening its Board by the inclusion of two prominent citizens of Calcutta, Sir Nripen Sircar, the Advocate-General, and Sir Hari Sankar Paul, the merchant prince. Frankly speaking, we do not like the system of managing agency in the case of insurance companies or banks. While we have, thus, to make our position clear in this regard, we have great satisfaction in recording our appreciation of the way in which, since the appointment of R. G. Das & Company as managing agents, the progress of the National has been accelerated and its resources utilised with judgment, integrity and profit.

THE BRITISH EXAMPLE.

It must naturally occur to any one who has given thought to the lines on which the World Economic Conference might solve the problems before it that the best approach to them would be that of a government which has, over a period, sincerely tried to reconstruct its national economy. It is, of course, an essential condition of the value of such experiments that they should have been conducted in the national interest and not that of any particular clique or section in the country. If such be the standard, the only nation which can claim to throw some light on the path which the World Economic Conference might tread with advantage is Great Britain. It is not perhaps, easy to appreciate the achievement of the British Government for one who does not realise fully the peculiar difficulties of British economy in the post-war period generally and during the present depression in particular. The developments of international economy in the post-war period have not hit any of the industrial nations so much as they have hit Great Britain. The rise of the industrial nations has inevitably meant the shrinkage of Britain's export markets. After the war period, she was faced, so to say, with a clear-cut choice between the revival of the City's financial business and helping the British export industries by the depreciation of the pound. In our opinon, Britain chose the former course out of a feeling that, while the capture of the export markets was at best doubtful, the recovery of England's supremacy in international finance was beyond all doubt and was therefore worth some sacrifice. It is a matter of common knowledge that the tide of protectionism in the world during the last decade and the overvaluation of the pound together reduced British trade to the direst straits.

On the top of this came the unprecedented world depression. It was as if a high exchange and low trade together acted and reacted on each other with daily increasing damage on the nation's prosperity. With the hostility of France, the culmination of this decadence was reached in September, 1931, when despite the most heroic efforts Britain was obliged to abandon the gold standard. It is no exaggeration to say that the clouds which Britain feared so much in 1930 and 1931 burst in blessings on her devoted head. The day on which the gold standard was abandoned was also the day on which the nation set about earnestly the task of reconstruction. Currency and monetary theories in which, indeed, the prejudices and dogmas of earlier times had been no inconsiderable ingredient, were adjusted to the new situation. It was argued that the only objective of currency policy was in normal times to maintain the stability of its purchasing power and in times of depression to provide the much-needed credit for the revival of trade and industry.. A mild expansionist movement was set a foot and though the new policy failed of its purpose in stimulating trade and raising the level of prices, it had the equally welcome effect of creating a boom in giltedge and enabling the government to put through such colossal schemes of conversion on a favourable basis that large amounts were saved in interest charges. Other economies were effected, as for example, the drastic reduction in unemployment relief. Confidence in sterling was revived to such a large extent that there was a large group of countries who learned to regard the British currency as an oasis of assured security amidst the desert of ignorant and whimsical monetary administration. Towards the middle of 1932, Great Britain had regained in full the confidence which had been sadly shattered by the fall of the pound and the chaos of her national budget. The two outstanding achievements, namely, the reform of the budget and the retention of London's supremacy in international finance put heart into the nation and thereafter it was a question of following up the earlier achievements with attempts for fresh conquests.

* * *

Whatever may be said of the methods by which the budget was balanced, there is no gainsaying that it was a substantial achievement or that it had its place in reviving the confidence of the trading community all over the world in the integrity of British finance. And what is even more important, the Government felt encouraged to attempt the tasks

that yet remained. The general outlines of the economic policy of the National Government were then clarified. Much that they would have to do had already been done in the attempt to save the pound. The condition of any exchange policy is the restoration of a healthy balance of payments; and towards this end imports had been drastically restricted. And now it was a question of working for the expansion of trade. At home a policy of protectionism agreed as much with the inclinations of the party in power as with the needs of the situation. But there was no getting away from the fact that the central problem of British economy was to ensure the supplies of raw material for her industries and secure the markets for her products abroad. The Empire with its diversity of supplies and needs was ready to hand. The Ottawa Pact was rushed through with what appears to have been Herculean efforts. And now the British Government apparently think that the time is come for concluding similar agreements with the non-Empire countries with whom Britain has intimate commercial relations.

* * *

During the week, some of the provisions of the agreement concluded between Great Britain and Argentine have been made known. The proposals in the earlier stages of the negotiations have been discussed in our overseas columns. And mention is also made of the views of certain sections of opinion in the Republic on the proposals which have since been formally accepted by both parties. The central point of the whole scheme is a British loan of £10,000,000 at 3½ per cent. plus 1 per cent. for amortisation redeemable in 20 years. As has been pointed out in our overseas section, the object of the loan is to thaw the frozen British credits. Time was when Britain would attach no conditions to loans raised in London by foreign borrowers. There was the confidence that in the articles produced in Britain she was the cheapest seller and that therefore foreigners were bound to spend in the country the loans she obtained from its investors. The change in the economic situation of not only Britain but the world as a whole may be imagined from the fact that loans are now part of trade agreements and stipulations are made about the purposes for which they could be utilised. In fact, Great Britain has gone farther. It is reported that one of the proposals made on the British side was that 35 per cent. of Argentina's available foreign credits should be set apart for purchases of British products. It is, therefore, quite understandable that opinion in Argentine should be opposed to the inclusion of the Trade Agreement. Further comment on this question would not be apt till the Air Mail puts us in possession of the full text of the Agreement. Suffice it now that the agreement provides in return for Argentine's admission into the British quota system for frozen beef, mutton and lamb and an increased offtake on the part of the Republic of British coal, motor cars, and other engineering products.

* * *

During the last few months, Britain has been working on the same lines in regard to other nations. The Anglo-German Agreement was also concluded in the middle of the week. And under it Germany agrees to take not less than 190,000 tons of British coal and coke every month (which is nearly twice the present quota) in return for tariff concessions on a number of articles such as toys, musical instruments, clocks, jewellery, hollow ware, safety razer blades and certain chemicals. It is reported that in the Agreement between Britain and Denmark each country has undertaken that the import duties on certain classes of goods shall not be raised above the specified rates, some of which have already been reduced as a result of the new understanding. As in the case of Argentine Britain has been in a position to offer Denmark the advantage of a share of the quota of imports; and Denmark has bound herself to increased imports of coal from Britain.

* * *

While recounting the attempts and achievements of the British Government, it is difficult not to think of the singular contrast offered by the United States of America. That country has ever been the pet child of Nature. Rich and virgin land, a population endowed with the utmost political autonomy, freedom from the cramping prejudices and obsessions of a past, with internal peace assured by sheer absence of an enemy or a neighbour, the U.S.A. was marked out from the outset as economically and politically, a giant among the nations. To such a country came the invaluable opportunities of the war. At a stroke its position was changed from one of a debtor into a creditor nation. The world's gold poured into her coffers in one impetuous torrent, while nature showered on her limitless bounties. All this has not sufficed to save her from the deadly grip of the depression. And to this day she has shown no genius for a planned attack on all the problems with which she is now faced.

* * *

The one hopeful feature to-day is the apparent determination of President Roosevelt to see through to a successful conclusion the talks he has had at Washington with the representatives of foreign powers. And if he is to succeed he would do well to study the British experiments with the utmost care and attention. For they are useful both as a warning and as an example. In some respects the British Government have shown themselves narrow in their outlook though it may be pleaded in their defence that they followed the course which in the circumstances was the best and the most practical.

If we are to sum up what is most useful in the record of the British Government, it is first of all the policy of inflation free from the obsession of the gold standard. Secondly, the provision of credit on liberal terms for trade and industry. Thirdly it is the exploration of the possibilities of truly economic bonds between nature and nation—though, indeed, Ottawa is a most regrettable exception. There is behind all this the recognition that no enduring system of national economy can be built on the unsure foundations of a too intricate system of international exchange of goods.

Indian Finance can, I venture to think, claim to have made a far more careful study of the phenomenon of "distress gold" than the Government have cared to do. We have made most elaborate enquiries on the spot—in more grandiloquent language, researches—at such centres as Amritsar, Lahore, Ahmedabad, Bombay, Madras, Rangoon and a good many villages of South India. It was the Paper Currency Reserve return for the first week of March, 1931, that contained definite evidence of this release of gold from upcountry centres and its flow into currency reserve. In the very following week, we referred to this new factor and coined the phrase "distress gold" to describe the phenomenon—an appellation which has now come into general vogue. In all these two years, we have written so often and in such detail on this theme that a collection of these articles would make a brochure of respectable size. What we have taken reams on reams of paper to elucidate, the *Vikatan*, a sprightly and vivacious bi-monthly in Tamil, has described in one telling and arresting phrase. The piquancy of the vernacular saying, which it uses, is lost in the translation; but I may render its remark somewhat as follows: "My neighbour's ghee and my wife's serving". If one has himself to pay for the ghee, the good housewife is sure to be pretty stingy in the quantity of the precious liquid she serves out even to her lord and master. But if the risk as to cost is to be borne by the neighbour, there is every incentive for sheer extravagance. Now, of the gold that belongs to Indians and leaves India, our British friends say: "This is a splendid thing. It will do you a lot of good. Export gold and prosper". Of the gold that Britain had and that was tending to leave Britain prior to September 21, 1931, our British friends said: "This is all due to greed of other nations. Cut off from gold standard. And dissuade gold shipments. To export gold is to expire".

* * *

More and more of the metal has been coming into England since last January. Of these imports, Britain feels quite bucked-up and, with chest expanded and with a glow in her face, exclaims: "Look at us. Who can assail London? Our supremacy is again restored. Our gold stocks are now far higher than they ever were". It suits England to import gold; it suits England to advise India to export gold. India's gold is England's neighbour's ghee; and her good housewife need have no great scruples as to what happens to the neighbour's ghee, so long as her own ghee is carefully looked after and economically used.

* * *

Ditto as regards the ratio. Britain restored, in 1925, the pre-War parity of sterling with gold. India was asked, on the other hand, to appreciate her currency by 12½ per cent.; and in all the currency history of the world, there is, I believe, no parallel to this whimsical appreciation of the rupee. Britain regretted, ere long, the restoration of pre-War parity; and after the fall of sterling in the Autumn of 1931, she has been endeavouring, might and main, to maintain her currency depreciated by about 25 per cent. We do not hear, now, of the old style of talk on prestige. Expediency rules Britannia and her sterling. Why should India alone be asked to let prestige rule her and her rupee? If a lower ratio is good enough for a country which has always prided herself on being pre-eminent in world finance, why should a higher ratio be forced on a poor nation without any pretensions whatsoever? If England's currency is now depreciated by 25 per cent. as compared with the pre-War level, why should India's currency be depreciated by only 12½ per cent. or thereabout? If Britain values the vindication of her *bona fides*, she should, without hesitation or delay, let India have a sixteen-pence ratio. Eighteen-pence (even if it be only eighteen-pence sterling) is ill-fated, replete with unhappy consequences, and associated with bitter memories. India's ratio has been in the nature of Britain's neighbour's ghee; and Britain has been quite reckless how she deals with the neighbour's ghee.

* * *

Ditto with the campaign for *Swadeshi*. "Buy British" in Britain is a patriotic movement. "Buy Indian" in India is, at best, tolerated by our British friends. England is being jealously guarded as a market for British manufactures. India is ever viewed as the best and most profitable market-place for Britain's exports. I have scarcely come across a Britisher, who would insure in any company other than a British office. Yet, the Bombay Government came out, three years ago, with a pamphlet calculated to dissuade Indians from insur-

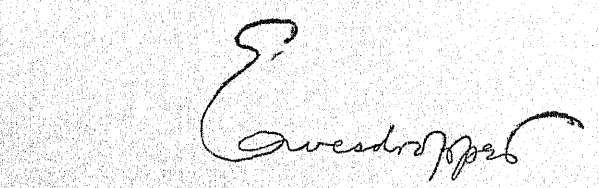
ing with Indian Companies. It is true that the pamphlet was withdrawn later. But the spirit underlying the attitude of the authorities towards Indian enterprise is unmistakable. India's economy is Britain's neighbour's ghee; and Britain has not bothered to be as particular and careful in the use of this ghee as she has been about her own.

* * *

Mahatma Gandhi laid down, and Lord Irwin agreed, and common sense sanctions, that the financial safeguards should be tested by the criterion whether they are in India's interest. But the White Paper lays down, and Lord Irwin does not disagree, that the criterion should be whether the safeguards are in the interest of India and Britain. If one studies the safeguards proposed they are hardly in the interests of India and certainly in the interests of Britain. The proper attitude, from the standpoint of the enlightened self-interest of Britain, should be that whatever is fundamentally in the interests of India should prove incidentally to be in the interests of Britain. The emphasis is on India's interests; the other follows as a corollary. The policy heretofore has been exactly the opposite. Whatever is in Britain's interests is thrust on India; and it has been averred that it should also prove to be in the interests of India. If only England would look after her neighbour's ghee as her own, all the bitterness and rancour that prevails in respect of monetary, currency and financial policy and operations of the British rulers in India, would disappear.



(*Continued from page 763.*)

the option of Great Britain, upon not less than 30 days' advance notice in any bonds of the United States, issued or to be issued after April 6, 1917, to be taken at par and accrued interest to the date of payment."

In the same clause is contained a provision that payment, if in cash can be made at the option of Great Britain in gold coins in the United States or in gold bullion or in immediately available funds." A writer in *Financial News* observes in commenting on this:

"The latter part of the sentence may be interpreted as meaning that payment would be accepted in dollars. In any case, the payment can be made in United States Government Bonds; although these bonds contain a gold clause, it is unlikely that the United States Government will make payment in gold or its equivalent, and therefore their market price will not rise in sympathy with the premium of gold in terms of paper dollars."

It is indeed, heartening to think that there is a legal loophole through which the nations concerned might make an escape from the present difficulty. But one might wish that there were no need for such loopholes and that there were general agreement that when there has been a depreciation of currency in a country the benefits of such depreciation should be equally available to all concerned. After all, the gold clause is an attempt to circumvent the legal provisions of a future date; and the law of the country would nullify itself if it were to recognise its validity.

WHY YOU SHOULD SHOP AT CURRIMBHOY'S

There are three chief reasons why you should shop at Currimbhoy's. Firstly, you can be certain that the very best quality cloth is being supplied to you because you can rely on the famous Currimbhoy group of mills where the cloth is made. Secondly, you are supporting Indian Industries when you purchase at Currimbhoy's Cloth Depot. Thirdly, Currimbhoy's fabrics are unequalled in India for their durability and lasting colours.

C. I.

SIR RAJENDRANATH MOOKERJEE

AS MAN, GENTLEMAN, AND BUSINESSMAN

A TRIBUTE TO A TRIBUTE

The lives of great men have a public value in that they inspire some of the lesser men to aspire to live lives with some manner and measure of greatness.

Only in the case of a truly great man is a biographical sketch justified. Let the hero be just a wee bit less than hundred per cent. heroic in stature and proportion and traits, the biographer is apt to be construed as a flatterer. One, who takes on himself the task of interpreting the life of a fellow-being whom one fancies to be great, is, thus, exposed to a very grave risk. His very judgment is, at the outset, in question. The criterion applied is not whether the biographer has done his work well but whether the subject of his biography is worth the study that is being made of him, his life and his work. If the answer to the latter query is in the affirmative, Boswell has rendered as notable a service to the world by his literary work as Johnson has done by his rare life and noble example. A biographer in such a case is thrice-blessed; he blesseth his hero, he blesseth himself, and he blesseth the world.

A good biography of a great man is, from this point of view, assured of a significant place in the programme of ways and means for making the world better, nobler, braver and more wholesome.

Of Mr. K. C. Mahindra's sketch of Sir Rajendra Nath Mookerjee, of which I received a copy this mid-week, and the pages of which I eagerly perused the same day the book reached me, I can, without hesitation or qualification, say that the "hero" is a fit study and the writer an apt biographer.

It has been my unique fortune and privilege to have come into personal contact with most of the actors that have strutted the stage of Indian business in the last fifteen years. I know most of the business leaders in such different centres as Bombay, Madras, Calcutta, Ahemedabad and Cawnpore. It has been my hobby to develop and cultivate these contacts. It has, ever, been my humble endeavour to revere and worship merit wherever it be found. I am not one of those who look for the feet of clay of heroes; what arrests and interests me is the halo that surrounds their heads. The halo of Sir Rajendra Nath has impressed me most vastly and most profoundly.

Were I asked to name the most fascinating figures I had met in the ranks of businessmen, I would mention Sir R. N. Mookerjee first—other names are Sir Dorab Tata, Sir David Yule, Mr. G. D. Birla, Mr. Burjoroji J. Padshah and Mr. N. S. T. Chari.

Each one of these was or is a type by himself. Sir Rajendra is uncommonly great in the common virtues. Sir Dorab was a great man who did things in great style. Sir David was a shrewd man who brought his shrewdness into play in the broad plan as well as in the tiniest detail. Mr. Birla is noted for a rare combination of real shrewdness with genuine simplicity, so much so that I, for one, have wondered if the simplicity itself were only a shrewd pose; he is a most intriguing theme for the student of psychology. Mr. Padshah was a philosopher who sought to import the higher outlook into matter-of-fact business. Mr. Chari was a giant in the things of industry he knew, and a pigmy in the things of life and man he could never understand. Here is a galaxy of men whose careers should make romantic reading.

Romance implies something out of the ordinary. Yet, there can be poetry and romance in the life of one who was extra-ordinary only in the sense that his was a rare but complete juxtaposition of all ordinary virtues. Sir Rajendra's life appeals to one and all because he is the epitome of all that one and all should strive to be.

Clive Street knows him as a leader, whose integrity is of the highest order and whose success in business is not an accident or fluke or mere stroke of luck but the definite result of a definite plan, well-conceived and well-executed. Government circles know him as a counsellor who speaks his mind frankly and respectfully and whose judgment is free of fear or favour. His family know him as a benevolent, extremely affectionate but somewhat autocratic patriarch. The thousand and one public institutions in Calcutta know him as a generous patron whose left hand does not know what the right hand gives. But few know and realise how essentially simple and homely he is in his affections, in his outlook on life, and in his connections with the business community in particular and with the world at large.

Sir Rajendra is almost child-like in his attitude to life and society. Beneath the simple and spruce dress in western style which he wears with becoming care, there is the yearning for the comfort and the *nonchalance* of the *dhoti*. Beneath the tone of frigid curtness and the behaviour of resoluteness and finality in decision, there is the constant effort to place himself in the shoes of the other, the poise of a just mind, which will be pained by any injustice—however unintentioned—to anyone near or dear to him. Beneath the careless generosity of a real prince of charity, there is the touch of living and heartful sympathy for all seeking succour or help from him. Sir Rajendra is nothing if he is not intensely human.

As I said, few have had the opportunity to know this fundamental human trait in him. K. C. Mahindra, a trusty lieutenant, is the kind of "valet" who has, reverently, grown in hero-worship. Mr. Naren Mukerjee, the factotum of Sir Rajendra in all his charitable undertakings connected with his village, has, perhaps, responded most profoundly to the influence of his life and example; and Naren cannot refer to Sir Rajendra's qualities of heart without emotion in his voice and, perchance, tears trickling down his cheeks. I have, though not privileged to have any great or long intimacy, been struck—instinctively, so to say—by the unostentatious but unquestioned greatness of Sir R. N.

Mookerjee as a man, as a gentleman and as a businessman.

It has been my custom to call on Sir R. N. once a month or so. Every time, he has received me with an affability which has ever touched my heart. His enquiries of how I do and get on have always showed genuine affection. He would remember the littlest trifle if he can repeat it by way of an assuring compliment. And at time of taking leave, he has never omitted to ask me to see him more often, adding that I should observe no formality, that I was always welcome, and that I should not at all have any idea that I would be disturbing him in any way. All this he would say in a tone and a voice that speaks of the human touch of warmth and encouragement to a youngster seeking to climb the ladder of life.

To another who is proud to own that he has "basked in the sunshine of his favour all my life," Sir Rajendra, the man, has, likewise, appealed as far greater than Sir Rajendra, the successful businessman. In the course of a direct and feeling address at a function in the village school, Naren paid the following tribute:

> "A devoted husband, a loving father, a generous friend, a kind and just master, a keen lover of his country and of his village, he is so uncommonly great in the common virtues of life that you will find few his equal. His philanthropy is based not on mawkish sentimentality, but on deep love of all fellow creatures, weak and erring. It is easy for rich men to give in disgust out of their plenty in order to relieve themselves of the importunities of the poor and the weak. It is not so easy to feel for them and to extend to them not only a helping hand but a hand of sympathy so that they may regain their self-respect in this world. In this Sir Rajendra is unique. For him, the weak and the erring were not made to be trampled upon, but that they be taken care of and put on their feet again."

K. C. has shown a like appreciation:

> "The frequent use of the imperative by Sir Rajendra has created for him an erroneous reputation that he is a ruthless and impatient taskmaster. No doubt he is an autocrat in business practice and his friends continually suffer from the dictates of a domineering personality. But it will be difficult to find a more fair-minded and considerate employer of men. Just as his friends feel behind his rough abruptness the pulsations of a most loveable temperament, so do his 'men' learn to feel for him personally a loyalty which they would give to no other man. Sir Rajendra's autocracy in business affairs, his iron rule over the family, his rough and abrupt decisions, his impatience—all these traits proceed from sublime self-confidence, which combines with generosity of heart, great affection and innate courtesy to present to us a rich life which is, indeed, a triumph of character."

A measure of his personality and of that of Lady Mookerjee is afforded in the following acknowledgment of kindness from a retiring Governor of the Province:

> "My wife and I consider ourselves fortunate to have come to Bengal, if only to have had the pleasure of meeting you and Lady Mookerjee. Your friendship will always remain one of the happiest memories of our period of office."

As a businessman, he has shown enterprise, versatility and the true instinct for pioneering. As a public man, his activities have extended over a wide field and embraced all that has furthered the stamina and happiness of society. In both capacities, he has avoided the limelight. He has not craved for power or blatant publicity. His has been a true spirit of service in a blend of utmost humility and healthy self-confidence. He has a mind of his own; yet, he is always open to conviction. He has a strong and dominant personality; but he never fails to be pleasing and agreeable.

In business, water works schemes were his first speciality—the lever which pushed him up in the first stage of his career. Light Railways were entirely his—and his own—pioneer achievement. City electric supply engaged his attention in turn. But through all his business activities, he is essentially the constructive architect and the noble builder. Brick by brick, he has built up countless buildings which are things of beauty and joy. Brick by brick, he has built up his own career which is, in a not less degree, a thing of beauty and joy.

His interest in public affairs shows his many-sided sympathies. Girls schools, Boy Scouts and Girl Guides movements, institutions for the blind and the poor, clubs for the freer intercourse of men of all races and views, athletics and sports of every kind—these are some of the objects which he has helped generously with his money no less than with unstinted enthusiasm and energy.

Despite over half a century in the din and excitement of business which is ordinarily paraphrased as money-making, Sir Rajendra has always remained true to the inspiration of high ideals. At about four score years, he, the practical man of business, is, in the completest sense, a visionary of a new and better world, an idealist of whom it could be said that his unvarying aim and endeavour has been to illustrate, in his own life, his own definition of the Happy Warrior in the Battle of Life:

> "A gentleman is he who has a strong character, whose truth is constant and who is honest in his acts, veracious in his speech and one who wins the confidence of all by living a life of perfect integrity."

The biography of one whose loyalty to the life of perfect integrity and impressive achievement is unquestioned is an educative and ennobling influence.

I thank K. C. Mahindra for an inspiring study of an inspiring personality.

OLYMPIA

(From Our Own Correspondent.)

Simla, May 2.

I was thinking of telling you what people here have thought of the Pope Report on Railway economy but with the bombshell of Mahatma Gandhi's fast which was hurled yesterday all discussion has turned to the possible developments in this respect.

* * *

"Why this stunt again?" asked me an official to whom every fast is a "stunt." But a stunt must have some motive, whether political or personal, and that, he admitted, he could not ascribe in the present case.

* * *

Simla is puzzled by the news ; because it raises all the old problems it had to face when Mahatmaji decided to fast to death, unless the Depressed Classes question was settled by mututal agreement as against the imposition of the Communal Award. Then, too, they had to keep their plans ready as to how meet the situation if and when his life was in danger.

* * *

The plan that seems to have been decided upon at that time was to remove him to a bungalow outside the jail and let him face the consequences of his fast, as a free man. The reason for this decision of Government was that while Gandhiji was within the jail he was in the charge of Government who were to protect his life against what they called "Suicide through starving himself to death." And they thought that this legal responsibility could be got over only by putting him out of jail.

* * *

The same question arises to-day and the Executive Council of the Viceroy meets in two days to decide on the question. I should not be surprised if by the time this appears in print a decision to release him is arrived at. Government had already been considering the question of his release ; and hitherto its decision to make no move in this direction was due to the feeling that it might be interpreted as a political gesture and a 'sign of weakness.' Government has always felt that it should give liberty to Mahatma Gandhi for his anti-untouchability campaign, but somehow or other this feeling has never been strong enough to neutralize the political prejudice against the Congress leader.

* * *

As for the real crisis, that has led to this fast Government avers it is yet in the dark. Probably that is so. And Mahatmaji has also kept quiet because his motives in the past have always been questioned by his enemies. This time he gives them no inkling of his mind. His statement issued in connection with the fast is open to various interpretations. I will tell you one that has gained some currency here.

* * *

It is said that Gandhiji is utterly disgusted with the manner the Temple Entry legislation has been handled by those concerned. It is a well-known secret that the plot to have the legislation before the Assembly, rather than before the Madras Council, was hatched with a view to kill the bills through dilatory tactics. And the so-called sponsors of the bills must be held as being privy to it. They wanted cheap notoriety as authors of the bills even at the cost of the real purpose of that legislation. This is one side of the picture.

* * *

Some of Gandhiji's own followers have disappointed him in this respect ; and well might he feel that what to him is a sacred principle has been treated as a joke both by Government and by the Hindu politicians. In what proportion he would apportion the blame remains to be seen. Perhaps he would never let us know. But the truth of the matter seems to be that Gandhiji feels keenly that a question of such grave political and national importance had been so miserably handled. While he is a helpless political prisoner, there is liberty to rouse the country to a true sense of its importance.

Another question—more a cynical comment than a question—you come across here is "Has not Gandhi, as usual, left a loophole to get out of this fast?" And the answer such cynics give is, "You see, he says that he will abandon the fast if God persuade him to do so!" This is not a very uncommon comment here ; and that explains again why Gandhiji is determined to fight all the elements arrayed again him.

One question that is intriguing many here is "Would Gandhi have fasted if he had been a free man?" All agree that most probably he would not have. He would have roused the conscience of the nation by constant tour and propaganda and he would have no grouse against himself if the country did not respond to his call. But now he is a prisoner with a limited capacity to talk and to grant interviews. The type of men that visit him are all Philistines with a vener of intellectualism, who feel happy in arguing in the abstract on a matter which is more spiritual than intellectual. And Gandhiji has lost his patience with them.

Instead, he would have made a direct appeal to the heart of the common people and, as these people are ever nearer to God than the so-called intellectuals, Gandhi would have created such a force of public opinion as would have swept off their feet even the intellectuals.

Government, however, has been thinking otherwise. It has persuaded itself that Gandhiji's untouchability programme is merely to revive the dying Congress and that therefore he should not be granted liberty to infuse a new spirit into the people. They argue that Mr. Gandhi's charkha creed, which began on a non-political platform, has already secured for itself a nation-wide adherence even on economic grounds ; and that, if untouchability were to be allowed to be preached on a non-political basis to-day, it would ultimately merge into politics and give Congrees a new prestige and fresh vigour.

Well, the die is cast.
